

Day 5 Live Session

06:09 - 06:10

Audio shared by Sumedha: But in the other hand.

16:19 - 16:22

Uthappa Outskill: Hey everyone, a very good evening, good morning, good afternoon.

16:23 - 16:24

Uthappa Outskill: Hope you're all well.

16:30 - 16:33

Uthappa Outskill: I'm all good, Lauren, thank you.

16:34 - 16:37

Uthappa Outskill: A quick check. Am I audible? Visible?

16:39 - 16:40

Uthappa Outskill: All good from my end?

16:46 - 17:05

Uthappa Outskill: Yeah, I'm feeling better. Thank you. Thank you so much, folks. So I thought, one, I'll do a quick check-in. It's been about 5 days, so I'll do a quick check-in, come in, see how you guys are doing, and also give our teammates a bit of a breather, because we have a long weekend coming in. So, I hope...

17:05 - 17:06

Uthappa Outskill: The last 5 days.

17:06 - 17:20

Uthappa Outskill: by now, all of you had settled in. I had given you a 3-day window, right? I told you for the first 3 days is where you're going to be tested. You're going to be settling into the whole workflow of how the program runs. So, have you guys settled in right now?

17:21 - 17:24

Uthappa Outskill: Do you know how to kind of...

17:27 - 17:28

Uthappa Outskill: Move with the program right now.

17:29 - 17:29

Uthappa Outskill: Yeah?

17:31 - 17:32

Uthappa Outskill: Still figuring it out.

17:33 - 17:36

Uthappa Outskill: Of course, there's still a lot of time, no worries.

17:37 - 17:40

Uthappa Outskill: So, I keep getting this question around, I know...

17:41 - 17:55

Uthappa Outskill: getting exposed to AI and doing so many things in a very short span of time can be overwhelming. There were a couple of questions that I was just addressing even before the session started. So I'll talk a bit about how you can basically visualize all of these things and

17:55 - 18:04

Uthappa Outskill: Maybe give you quick tips on how you can go about implementing it, or how should your mindset be towards implementing it later, after the main session is done.

18:05 - 18:15

Uthappa Outskill: But I'm good... I'm glad to see most of you are settling in, and you're trying to find, I mean, you're getting in tune with the program at this point of time, but still a long way to go.

18:15 - 18:19

Uthappa Outskill: We'll, we'll talk more about it, okay?

18:19 - 18:22

Uthappa Outskill: So today, being day 5,

18:22 - 18:33

Uthappa Outskill: You all know there's a long weekend coming, so I'll first start with telling you what's going to be covered today and what's coming up for the next two days, and then we will get started off with the session.

18:33 - 18:36

Uthappa Outskill: I'll pause the chat here for a while.

18:38 - 18:51

Uthappa Outskill: need 2 weeks to practice. I think you need more than 2 weeks to practice. You... you actually need at least around 6 months to put everything into use, folks. I'm not gonna lie about the... there's no shortcut to put this into practice.

18:51 - 18:54

Uthappa Outskill: You will have to spend that time. Anyways...

18:54 - 18:57

Uthappa Outskill: Quickly bringing up the slide...

19:06 - 19:09

Uthappa Outskill: Is my screen visible? Can I get a quick check in the chat?

19:11 - 19:13

Uthappa Outskill: Is the screen visible?

19:13 - 19:15

Uthappa Outskill: I've set you to host and panelists.

19:18 - 19:31

Uthappa Outskill: Okay, I see, getting difficult to adjust time and all those stuff. I'll address it probably at a later part of the session, once the main session is done. I'll take a couple of questions and give you some suggestions on how to approach it. All of those questions, we'll pack it for later.

19:32 - 19:46

Uthappa Outskill: to begin with, today being Day 5, the topic that we're going to cover today is something connected to your Day 1 of the session, right? We kind of explored what MCPs are, how do you, navigate around

19:46 - 19:54

Uthappa Outskill: MCPs, build a workflow, model context protocols. I hope you guys still remember that. MCPs from day one.

19:56 - 19:57

Uthappa Outskill: Yeah?

20:01 - 20:09

Uthappa Outskill: Great. So, what we're gonna do today is go deeper into it, cover a couple of advanced use cases, advanced ways of using these MCPs.

20:09 - 20:25

Uthappa Outskill: which will also include kind of playing around with these workflows by going deeper into Codex as well, right? But most important, by the end of the day today, you'll also realize, you'll also understand how to build your own MCP server.

20:26 - 20:34

Uthappa Outskill: Right? I mean, any product out there. By now, I'm hoping you know the concept of API.

20:34 - 20:41

Uthappa Outskill: at least at a surface level, you know the concept of API. Any tool out there which has these API endpoints.

20:41 - 20:57

Uthappa Outskill: can be converted into an MCP server, right? There are technical ways, non-technical ways, so what we're going to cover is how do you basically build similar MCP servers using NATN? That is something that is going to be, that you'll learn by the end of the day today, so you'll get more context on that.

20:58 - 21:05

Uthappa Outskill: So, with that being covered today, what's the topic for the weekend? A quick reminder for all of those who have forgotten about it.

21:05 - 21:11

Uthappa Outskill: your Saturday and Sunday, that is tomorrow and day after, is going to be full-day sessions, right?

21:12 - 21:24

Uthappa Outskill: I'll come to these timings later after the session is done, so don't worry about if you're able to attend HiST or if you're able to attend EDT, so we'll cover that later. But just to let you know, it is going to be full-day session.

21:24 - 21:33

Uthappa Outskill: It is going to start at 10 AM IST, is one particular batch that runs, and another batch runs at 10 AM EDT.

21:33 - 21:50

Uthappa Outskill: The explanation, why it is so, and how can you get access to... how do you find out which is more suitable for you, and how do you move out, was already something that we discussed, before the program got started, but we will again revisit that later on after the session is done, so I don't want to take that time out right now. We will cover that later once the

21:50 - 21:55

Uthappa Outskill: Once that particular section comes. Okay? But let's focus on the topics that you will cover.

21:56 - 22:06

Uthappa Outskill: So tomorrow, that is Saturday, the first half of your day is going to go into learning voice agents, and the second half of the day is going to learn... is going to go into building products with the help of AI.

22:07 - 22:11

Uthappa Outskill: Wipe coding with the help of AI is something that you will learn tomorrow.

22:11 - 22:22

Uthappa Outskill: Alright? And then, that would have covered all our levels. Level 1, Level 2, Level 3, Level 4, and level 5. You would have learned how to build agents, you have to build products with the help of AI by tomorrow, end of the day.

22:24 - 22:25

Uthappa Outskill: on Sunday.

22:26 - 22:39

Uthappa Outskill: again, another weekend session. The full day is going to be, again, broken down into two parts. For the first part of the day, Vaibhav is going to be here, both part of ISD as well as EDT sessions. He's going to be part of these sessions.

22:39 - 22:46

Uthappa Outskill: he is going to help you. Some of the questions on how do you connect all of these things together, that is the answer he's going to give you. How do you...

22:46 - 23:02

Uthappa Outskill: club, or kind of weave all of these skillsets that you have learned so far, and build something of value, which is not just for yourself, but also for your end user. How are people outside making use of the same skill set that you have learned, and build, and monetize with it?

23:02 - 23:21

Uthappa Outskill: Wasn asking, is it his clone? Definitely not. Maybe you will need to kind of identify if that is his clone or, the real vibe of himself, but just kidding, he will be here, live, and helping you navigate to... through how do you connect all of these things together and build... build with it, and how are people basically making use of this outside?

23:22 - 23:25

Uthappa Outskill: And then the second half of the day is dedicated for your

23:25 - 23:45

Uthappa Outskill: Jerry, which is a multi-agent system which you would have been exposed to. So, you will build a V1, or the version 1 of your own multi-agent assistant, called as Jerry, using an ATING. So, you'll have a session, you'll have a breakout room activity. By the end of Sunday, you will walk away from the session with your own AI assistant.

23:46 - 23:50

Uthappa Outskill: This is the plan for the next two days. Is this clear?

23:56 - 24:00

Uthappa Outskill: Okay? If any of you still have questions upon

24:00 - 24:07

Uthappa Outskill: how do I... who should attend ISD, who should attend EDT sessions, and all those things? We will take it up after the main session is done.

24:10 - 24:20

Uthappa Outskill: Cool. With that context being set, let's quickly introduce our mentor for the day. And our mentor for the day is going to be Akshat Bahati.

24:20 - 24:28

Uthappa Outskill: To give you a bit of context who Akshat is, Akshat heads, he's basically the head of digital and AI Innovation Center at Adoko Group.

24:28 - 24:48

Uthappa Outskill: He has been mentoring, I think, close to approximately 5,000 plus learners by now on, how to build with AI, how to basically use AI on your day-to-day workflows. So that is something that he has been doing for the last couple of course, and one of the most sought-out mentors, at Outskill. So let's all welcome Akshat to the session.

24:49 - 24:52

Akshat Bahety: Hey everyone, I hope I'm audible. Hi, Uthappa.

24:53 - 24:54

Uthappa Outskill: Hey, hi, Akshat.

24:54 - 24:56

Uthappa Outskill: Over to you, Akshire, good luck.

24:57 - 24:59

Akshat Bahety: Perfect, yes, it's going to be a fun one, so...

25:00 - 25:10

Akshat Bahety: Awesome. Just a quick check, everyone. Can you hear me easily and properly? Yes? Clear? Clear? Perfect. Awesome. Lovely. Okay, so...

25:10 - 25:14

Akshat Bahety: One thing I just want to say, like, you know, again, something that... based on what Uthappa said, right?

25:15 - 25:24

Akshat Bahety: he said, like, you know, again, like, learning and everything else, like, you know, you are absorbing a lot about AI, and it's obviously going to be a lot, but I always like to say that in every session, like, you know, with AI.

25:25 - 25:29

Akshat Bahety: You want to be... you are trying to be learning something that is super...

25:30 - 25:32

Akshat Bahety: Like, you know, new stuff, and at the same time.

25:32 - 25:41

Akshat Bahety: if it was easy, everyone would do it, right? And you don't want it to be easy, because you want it to be a bit more interesting, a bit more complex, and still learn something, and then

25:41 - 25:52

Akshat Bahety: be always amazed by so many things that are available. So keep that in mind, right? We are going to go ahead and have fun with MCPs. We are going to learn about, like, you know, quite a bit of things, but remember, like, you know.

25:53 - 26:06

Akshat Bahety: things are supposed to be, you know, problems and, like, you know, learning things are not bugs, they are a feature of life. So let's use that, and let's go ahead and learn some cool features about that, okay? So...

26:06 - 26:27

Akshat Bahety: Let's get started with what is an MCP. I'm going to, like, you know, give a quick brief on what is an MCP. I'm going to start sharing my screen. Just hold on for a second. We're going to cover quite a bit of things around, like, you know, how to apply MCPs and different options, but let's get started by understanding what an MCP is. And I know you guys have already covered this, but I'm just going to, like, you know, take a quick 5-minute run-through.

26:27 - 26:28

Akshat Bahety: So...

26:28 - 26:37

Akshat Bahety: Think about, like, you know, again, there are systems in this world, right? There are systems... everything in the world is a system, like, you know, any software that you approach for. For example, let's say, take an example of Uber, right?

26:38 - 26:53

Akshat Bahety: Now, today, if you have to book Uber, what is the process, right? And in the chart, you open, like, you know, you open an app, right? You open an app, right? Then you go

ahead, you select the car you want to go, the place you want to go, and everything else, and then you technically book something. So, select the place...

26:54 - 27:08

Akshat Bahety: And then you have to obviously select the car that you want, depending on, like, you know, again, multiple factors, what do you prefer, how many people are traveling, and everything else, right? And then, after this, if everything works well, you get to yourself.

27:08 - 27:14

Akshat Bahety: a car, right, that you can go in. A taxi, whatever you want to call it, arrives, right? So, Uber arrives.

27:15 - 27:32

Akshat Bahety: And that is how the system works, yes? Can we agree on that? And guys, like, just for everyone, right? This session, I don't do sessions where I am doing this session. We are doing this session together, we are learning together, so you're going to reply in the chat, and everyone is going to reply to the chat, right? So, do we agree? This is how Uber works? Yes?

27:32 - 27:33

Akshat Bahety: Yes, correct.

27:34 - 27:46

Akshat Bahety: Now, if you think about it, right, again, there are, like, a couple of systems involved in this, right? Again, so obviously, you use the Uber app on one of your operating systems, so either Android or iOS, right? So...

27:46 - 28:02

Akshat Bahety: Android and iOS, and then you still touch this, and, like, you know, again, go from there. And you go to Uber, and then, like, you know, something happens in the physical world where a taxi arrives. Now, the goal is to technically have the taxi arriving, right? You must be thinking that, you know, if it was possible.

28:02 - 28:08

Akshat Bahety: Won't you prefer that if these three things could just be done by... like.

28:08 - 28:27

Akshat Bahety: wouldn't it be great if you could just call someone and, like, you know, just say, like, I just want to just get me a car, right? Like, so many, like, you know, like, one of the things

is, like, all the wealthy people in the world, right? Like, billionaires, millionaires, they just have, like, an assistant, right? They have an assistant that does all the above. They just say, I want to go

28:27 - 28:28

Akshat Bahety: tool.

28:29 - 28:32

Akshat Bahety: I don't know, like, let's say, like, you know, I want to go to a mall, okay?

28:32 - 28:36

Akshat Bahety: And they will just, like, you know, have someone bring a car.

28:36 - 28:48

Akshat Bahety: Does that make sense? Does that happen, like, you know, most people in the world, like, who are, like, an extremely rich... like, you won't imagine Jeff Bezos opening an Uber car. Even if he has his own driver, like, again, Pradley, like, again, they will just have someone, correct?

28:48 - 28:54

Akshat Bahety: Now, this is functionality, right? This specific functionality, is technically today

28:54 - 29:12

Akshat Bahety: To a certain extent, right? Possible. You'll still have to type a message, you probably won't be able to call, and you can call the agent, but this is where MCPs technically exist. MCPs exist to do one single thing, is that take an instruction from you, okay? So, they take an instruction.

29:14 - 29:16

Akshat Bahety: Take an instruction from you.

29:18 - 29:21

Akshat Bahety: And... perform.

29:21 - 29:24

Akshat Bahety: An action on another system.

29:24 - 29:28

Akshat Bahety: Perform an action on another system.

29:28 - 29:35

Akshat Bahety: So the only thing that MCPs does in the middle of this is they allow you to get connected.

29:35 - 29:37

Akshat Bahety: They allow you to get connected.

29:38 - 29:43

Akshat Bahety: So, this is how, like, you know, again, MCPs just allow you to connect from one system to another.

29:43 - 29:59

Akshat Bahety: Right? And this is... this has been happening forever, okay? Like, just let me be very clear, right? Systems have been talking to a lot of other systems. For example, you... a lot of you get OTPs, like, you know, via SMS and WhatsApp. Is that correct? Yes? Right? OTP in the chat if you get OTPs via SMS and WhatsApp.

30:00 - 30:18

Akshat Bahety: Right? Like, one-time passwords for anyone who is, like, you know, missing that context, right? So you get that, right? Now, how does that work, right? There is a system, there is a system that is very simply, let's say, like, you know, I don't know, like, you know, again, any... I'm just going to take, like, a bank, right? A bank sends out an instruction to WhatsApp.

30:18 - 30:20

Akshat Bahety: to send you a message. I'm obviously...

30:21 - 30:25

Akshat Bahety: to send you a message, and OTPs are just one-time passwords.

30:26 - 30:33

Akshat Bahety: Okay? Just so that, in case, having here. So, a bank just sends a WhatsApp message, and this is done. Okay?

30:33 - 30:41

Akshat Bahety: So now, if you think about it, right, the systems have been talking to each other for a very, very long time, and they have been, and they will keep doing that.

30:41 - 30:46

Akshat Bahety: MCPs are technically the... you can say, like, you know, again...

30:46 - 30:50

Akshat Bahety: It's a wrapper on top of one of the most complex things to do, okay? As in...

30:50 - 31:10

Akshat Bahety: engineer, I can tell you, like, again, building and connecting APIs is not as easy as it sounds, right? These things used to be done via things called APIs, right? APIs allow you to do that. The full form of APIs is application programming interface, it doesn't matter. APIs were single points, which allow you to connect from one system to another.

31:10 - 31:24

Akshat Bahety: What MCPs allow you to do is, right now, this bank has to tell, right, this bank has to tell WhatsApp to send you a message. But if tomorrow the bank wants to send you two messages, or, like, get your information from WhatsApp.

31:24 - 31:27

Akshat Bahety: get your information from WhatsApp.

31:28 - 31:29

Akshat Bahety: Then...

31:29 - 31:37

Akshat Bahety: Technically, they again need to make a connection, they will have to get their engineering team to do a lot of work, they will have to talk to WhatsApp and everything else.

31:37 - 31:42

Akshat Bahety: Agreed? Can we agree on this, that they will have to keep building this every time they need to perform something else?

31:43 - 31:56

Akshat Bahety: Yes. Like, every time they need to perform some kind of an action, they will have to build it, right? They will have to go to engineer, they will have to, like, you know, do the whole shebang of it, and it takes quite a bit of time, right? And this is a problem across the world.

31:56 - 32:04

Akshat Bahety: When things need to talk to each other, this is a problem across the world. Talking... it's very easy to, like, you know, pick up your phone and talk to your friend, right?

32:04 - 32:13

Akshat Bahety: And you can just, like, you know, call them, and you're like, you know what, here's what's going on, right? And you can even, like, you know, again, tell them, like, you know, you need something, right? And they will technically help you. You don't need to worry about what happens there.

32:13 - 32:16

Akshat Bahety: So if you think about it, like, you know, all of this is connected.

32:16 - 32:25

Akshat Bahety: All of this is connected, and every action takes a lot of time to connect, to do everything. So MCPs is this version of that all the bank needs to do.

32:26 - 32:27

Akshat Bahety: All the bank.

32:28 - 32:31

Akshat Bahety: what anyone needs to do is just use an MCP.

32:31 - 32:49

Akshat Bahety: Bank can make a single connection to WhatsApp via an MCP, and it can trigger whatever it wants. It can say, you know what, I want to send Akshat a message, I want to send Akshat an OTP, I want to get Akshat's details, whatever that might be, it is all possible.

32:49 - 33:03

Akshat Bahety: Okay? Does that make sense? That is, like, you know, the beauty of MCP, that is the idea of MCP, and MCPs work both ways, right? Just like, you know, let me make the arrow so that you can see. Like, MCPs work both ways. They're able to, you know.

33:04 - 33:08

Akshat Bahety: They're able to work both ways, so they talk both the sides.

33:08 - 33:11

Akshat Bahety: MCPs allow you to talk to both the sites quickly.

33:13 - 33:29

Akshat Bahety: So, MCPs are just, I will explain the difference, don't worry, guys, like, you're not worried, like, I'll explain the difference and everything else. Just understand the concept. MCPs allow you to connect to two different systems, right? And they both can talk to each other, right? And MCPs are just, like, you know, again.

33:29 - 33:32

Akshat Bahety: One of the most crazy, like, you know, again.

33:33 - 33:43

Akshat Bahety: solution that is built on, and they have been able to solve a lot of problems, because that means that I can just connect to WhatsApp, I can just connect to another system, and I don't need to worry

33:43 - 33:49

Akshat Bahety: what is available on that system as an action. I can ask the MCP to read, write, deploy, whatever I need.

33:49 - 33:59

Akshat Bahety: And that's what the goal of today is. We are going to understand how MCPs work. I'm going to show you in a quick example, so you will understand it better, and then we'll come back to this. Okay?

34:00 - 34:18

Akshat Bahety: Good enough? Let's go to the example. We understand what is MCP. I'll explain the difference. Don't worry, I'll explain the difference. Everything will... patience, right? Again, so let's go ahead and take an example. I'm going to take a very fun example. How many of you know about this tool called Higgsfield? Higgsfield AI? How many of you know about this tool?

34:20 - 34:26

Akshat Bahety: Yes, no, yes, okay, quite a bit of people. Okay, in case you don't know, very simply, Higgs field is a

34:26 - 34:45

Akshat Bahety: single tool, and probably one of the most popular tools in the world, to technically just create content, okay? It is create content. You can create images, videos, anything you want, and they have all the different models of the world, and you can create visual content, no matter what it is. You can create a movie, you can create a video, you can create audio, you can create

34:45 - 34:48

Akshat Bahety: quite literally anything that you need. Okay?

34:48 - 34:50

Akshat Bahety: But the idea is that

34:50 - 35:04

Akshat Bahety: At least I am not a cinematic expert, okay? I am not an expert at cinematic expert, and the only way for me to create anything as beautiful as what is available on their library is to ask AI to create it, and then do other things.

35:04 - 35:09

Akshat Bahety: Does that make sense? That's how most of you will use it if you are not an art genius. I am not.

35:09 - 35:13

Akshat Bahety: Right? You'll go to AI, you will ask for prompt, and you will paste that prompt here.

35:14 - 35:23

Akshat Bahety: Now, that is too much work, right? To come here and, like, you know, learn this tool and everything else. I just want to create content, I just want to create a movie, I just want to create a video, I want to create an image, right?

35:24 - 35:30

Akshat Bahety: And we're going to use AI to do this. We're going to use directly this tool within Cloud.

35:30 - 35:37

Akshat Bahety: You know that Claude can't create images? Can you agree? Claude can't create images. Do all of you know that? Claude can't create images. Yes? No.

35:38 - 35:41

Akshat Bahety: Yes, we agree, Cloud can't create images, right?

35:43 - 35:50

Akshat Bahety: It can't. Perfect, right? So, because Claude can't create images, we are going to give Claude a superpower. We are going to connect

35:51 - 36:04

Akshat Bahety: Higgs field with Claude. And for that, let's go into Claude. Let me, like, you know, let's first start with, like, you know, let me show you the fun part of it, and then I'll explain you how it all works. Okay, so let me just make this screen better. Now...

36:05 - 36:19

Akshat Bahety: Just to give you an example, I'm going to choose Opus for this, and right now, I'm going to give it a very simple task. I want it to create an image for me, okay? I want it to create an image for me, and I'm just going to make it, like, you know, simple to show you how this works.

36:19 - 36:23

Akshat Bahety: I want you to create an image about...

36:23 - 36:32

Akshat Bahety: a Japanese town in Studio Ghibli colors, right, with animated characters in that. And utilize the Higgs field MCP to do this task and get me an image.

36:33 - 36:34

Akshat Bahety: Okay.

36:34 - 36:44

Akshat Bahety: So, Studio Ghibli colors, I'll show you what Studio Ghibli colors are. Japanistown, I think everyone knows what Japan is, and I'm just going to ask it to create this. Super simple prompt, right?

36:44 - 37:00

Akshat Bahety: Now, if you look at it, there are going to be a couple of things that are going to happen at this moment, okay? There are going to be a couple of things that are going to happen at this moment. First, it's going to go ahead and call Higgs field. Let me just zoom in so you guys can see the icon properly. You can see, it has started calling a tool, Higgsfield GenerateImage.

37:00 - 37:04

Akshat Bahety: Okay? It started calling a tool, XField GenerateImage.

37:04 - 37:13

Akshat Bahety: And the idea is that it's now using Higgs field to actually generate the image. It is actually using Higgs field to generate the image, and we'll be able to utilize that image.

37:13 - 37:22

Akshat Bahety: Now, think about from a perspective, if you had to do it normally. You would first come here, describe what kind of an image you want, and then you will take that prompt, take that prompt, and put it in there.

37:23 - 37:29

Akshat Bahety: Is this a good image? Yes. On a scale of 1 to 10, pretty cool image, pretty close to what we wanted? Yes.

37:30 - 37:41

Akshat Bahety: Super, 10, 10, 100%, like, amazing image, guys, right? Come on, like, let's be honest, right? Now, the reason, like, here, again, it is a great image is because I didn't prompt it.

37:42 - 37:53

Akshat Bahety: I didn't prompt it, I just asked Claude to use the tool to create the image. And Claude, by itself, created a prompt, sent it to Higgs field, and created this image.

37:53 - 38:01

Akshat Bahety: I will show you how to connect Higgs field and everything else. I'm just showing... learn how to, like, you know, again, utilize the tool. First, I'll show you how to connect.

38:01 - 38:07

Akshat Bahety: And this is how you get an image. Now, if you look at it, even the tool, the Higgs field tool, has given me some more options.

38:07 - 38:18

Akshat Bahety: Within Claude. I am in Claude, and you can see, like, just to show you, like, you know, this is a more closer artifact, you have everything in Claude. I can even ask it to animate it. I can even ask to animate it.

38:18 - 38:22

Akshat Bahety: And I can click on the animate button. I can click on the Animate button, and I can say, you know what?

38:23 - 38:31

Akshat Bahety: Animate this image so that we can also hear the audio around the image, like, you know, the schoolchildren are all walking towards the path to go to school.

38:33 - 38:39

Akshat Bahety: I'm gonna do this. Now, do you think that is a good prompt? The one that I've given, to animate it? Yes, no?

38:40 - 38:52

Akshat Bahety: No. Right? Yeah, it's not. It's a horrible prompt, right? But the best part is because I don't need to, like, you know, worry about what kind of prompt it is going to go. It's going to be done by AI. Claude is going to take this and automatically

38:52 - 38:57

Akshat Bahety: make it better, and send it to MCP. Okay, so I'm just going to say this, and I can even tell Claude.

38:58 - 39:03

Akshat Bahety: animate, this better using Claude, so the prompt can change automatically.

39:04 - 39:23

Akshat Bahety: Okay, I'm just going to give that, and it's going to take it, and now Claude will automatically take it up, and change it into a model. Now, you can see Claude is asking me for access, right? It is saying, you know what, I want to use a Higgs field, are you okay with it? I'm just going to say always allow for now, and it will go ahead and start creating that image into an animation.

39:24 - 39:33

Akshat Bahety: Now tell me, do you understand the concept of using an MCP within a tool, within Cloud? Do you think this makes your process better?

39:33 - 39:37

Akshat Bahety: On a scale of 1 to 10, how much do you think you can utilize this kind of thing?

39:38 - 39:40

Akshat Bahety: Write, write the number, I want numbers.

39:41 - 39:55

Akshat Bahety: Right? Now, think about this and scale it to any other operation in the world. I'll show you how to add MCPs and everything else, but the understanding is that within a single tool, within a single tool, you can connect any tool.

39:56 - 40:05

Akshat Bahety: And you don't need to worry about how those tools are configured. If tomorrow Hicks Field goes ahead and adds 10 new features into their option.

40:05 - 40:07

Akshat Bahety: Okay? They don't need to worry.

40:07 - 40:13

Akshat Bahety: Okay? Like, you don't need to worry. It will automatically get added into your MCP.

40:13 - 40:35

Akshat Bahety: Like, no matter what, right? And I can tell you, I will show you my own use cases, right? Again, if you really, like, you know, again, if you get through this session, I will show you my own use cases on the kind of MCPs I use. I manage my whole life using MCPs of different tools. I have my financial accounts connected, I have my products account connected, I have my work accounts connected to, like, you know, the kind of work I do. It's all in a single place.

40:35 - 40:40

Akshat Bahety: And without MCPs, I would be... I was just clicking 17 different tools 17 different times.

40:41 - 40:42

Akshat Bahety: To get data.

40:42 - 40:55

Akshat Bahety: Okay? So that is the power of utilizing MCPs and understanding how they work. Okay? So, we are going to wait for the image to come in, right? And in the meantime, I'm just going to see if there are some cool questions that I can answer.

40:56 - 41:06

Akshat Bahety: And we'll go from there. Great question. Does Claude decide which model is best for the request? Yes. Technically, both of them does. So, when you send out a request to...

41:06 - 41:17

Akshat Bahety: Higgs field, it automatically is obviously asking Claude which model to use, and it gives suggestions. So, Higgs field is a pretty good tool, they give you both the options, and then they allow you to choose the model. So Claude already chooses on your behalf.

41:17 - 41:20

Akshat Bahety: Because... Claude knows I know nothing.

41:21 - 41:21

Akshat Bahety: Okay?

41:24 - 41:32

Akshat Bahety: Okay, and, like, again, we will... we will, like, you know, again, I'll show you in a minute on how to connect this. Don't worry, I'll show you in just a second on how to connect these tools.

41:34 - 41:40

Akshat Bahety: Okay, let's see. I hope this gets generated faster, but hopefully it's a good generation, it's worth the wait.

41:42 - 41:51

Akshat Bahety: First time, it didn't ask permission, because the way the model, like, MCPs connected, images are okay, videos obviously cost a bit more, so it asks for permission.

41:54 - 42:10

Akshat Bahety: There's... okay, like, again, guys, for the cost and tokens part, yes, when you're using Claude and Higgsfield together, you're obviously spending Claude tokens also, and you're also spending Higgs field, credits. But that is a very small price to pay in the scheme of things, that you don't have to switch between

42:11 - 42:13

Akshat Bahety: It's... you're thinking in terms of two tools?

42:14 - 42:19

Akshat Bahety: you are just thinking, Akshat, like, you know, you're spending Claude tokens for using Higgs field, you could have just copied and pasted the prompt.

42:19 - 42:25

Akshat Bahety: The difference is that you need to understand that your time is much more valuable than the cost of AI and everything else.

42:25 - 42:28

Akshat Bahety: Okay? So let's see, we have this...

42:29 - 42:32

Akshat Bahety: Can you guys hear the... can you guys hear this? Can you guys hear the...

42:33 - 42:38

Akshat Bahety: prompt, and like, again, okay, no, I'm going to share, I'll share. Yeah, got it, got it.

42:38 - 42:40

Akshat Bahety: I want to share with someone. Give me one sec.

42:41 - 42:43

Akshat Bahety: Okay? Should...

42:46 - 42:49

Akshat Bahety: Yes, could you hear it now? Yes?

42:49 - 42:55

Akshat Bahety: Right? Do you think my prompt was so good that it was able to, like, you know, capture all kind of information? Right?

42:55 - 43:00

Akshat Bahety: Right? Do you think this is, like... doesn't this feel like right out of an anime, like, you know, game?

43:01 - 43:08

Akshat Bahety: So the idea is that, like, you know, again, Claude was able to use the MCP, Claude was able to improve my prompt, and really, like, you know, give us this output.

43:10 - 43:12

Audio shared by Akshat Bahety: Right?

43:12 - 43:16

Akshat Bahety: Obviously, it's not perfect, but the point is, like, again, we created this in the last...

43:16 - 43:20

Akshat Bahety: 3 minutes, 4 minutes, right? And probably, like, what, 2 minutes of them were sent out of that.

43:20 - 43:40

Akshat Bahety: So the idea is that, now think about this in, like, you know, think about this as if you are a creative person, or if you wanted to create your own anime, like, for 3 minutes, like, you know, you wanted to create your first anime video, how much better would it be to actually just create this in Claude? You can just say, okay, you know what, after this scene, I want you to show this cool.

43:40 - 43:48

Akshat Bahety: Okay? Now, think about this, okay? After this scene, I want you to show this cool. I'm not going to do that right now, we have a lot more to cover. It would be so much more easier

43:48 - 44:01

Akshat Bahety: to just do it in Claude, because Claude has the context of your whole conversation, and it also knows, okay, which images and videos are getting created, so it can keep going on, and you can keep creating one image, one video image after another, okay?

44:01 - 44:12

Akshat Bahety: And that is the idea. That is the complete, like, you know, again, power of using any of these tools, because you can do so much more. Being in a single tool, it knows the context, it knows what is generated, it knows everything, and it can just keep going on with it.

44:13 - 44:23

Akshat Bahety: Okay? So, this is the understanding, this is what you need to understand from a perspective of the benefit of MCP, and now let me show you how to add an MCP here, okay? So...

44:24 - 44:31

Akshat Bahety: First, very simply, you need to go to Settings, and in Settings, you need to go to Customize.

44:31 - 44:48

Akshat Bahety: And we'll have... we can connect via connector, or anything else. And let me, like, you know, again, bring you actually back to Higgs field. So, anytime you need to search for an MCP for any tool, just go ahead and literally... either you go to their website, and you can see MCPs, or you can search for Higgs field MCP,

44:48 - 44:52

Akshat Bahety: Alright, and you will be able to find, like, you know, again, their MCP document.

44:52 - 45:17

Akshat Bahety: In this, they already give you multiple options on how to connect different tools, okay? They already show you multiple options, and this is super easy. This is not complex, this is not something that you have to worry about, it's super easy. You can see, you just need a connector URL, like, you need the Higgs field MCP URL. I'm going to do these steps,

right? Again, it's super simple, there is no need to repeat this with me, just understand for now, and you will, like, you know, we have a lot more to do, so we'll do that.

45:17 - 45:19

Akshat Bahety: And then, after this, you technically open Claude.

45:19 - 45:21

Akshat Bahety: I'm going to switch to Claude.

45:22 - 45:29

Akshat Bahety: We're going to switch to Claude, and in Claude, we will go to Customize, and from Customize, you can connect

45:29 - 45:34

Akshat Bahety: you can connect into connectors, right? You can connect into a connector.

45:34 - 45:41

Akshat Bahety: And you can just name... you can just put, like, you know, MCP, and you can also write here, Higgs field MCP.

45:42 - 45:43

Akshat Bahety: And click on Continue.

45:43 - 45:54

Akshat Bahety: Now, we already have a connector connected, so it will not, like, you know, let us connect another one, but the idea is once you connect, it will just ask you to sign in, and you can normally sign in into as any other connector.

45:54 - 46:00

Akshat Bahety: So, you must be like, Akshat, like, you know, you have connected it as a connector, then why do we call it an MCP?

46:00 - 46:10

Akshat Bahety: I'm going to give you a, like, you know, beautiful learning. Most of these connectors, most, like, 99% of these connectors are actually just MCPs on the backend.

46:10 - 46:21

Akshat Bahety: And I don't know, like, if there is something popular, but if you can see here, like, these are all, more or less MCPs on the backend. Connectors are just clawed way of saying MCPs.

46:21 - 46:32

Akshat Bahety: Because what is easier to understand for a normal user who is not in this session, who is not learning about AI? Connectors or MCP? If you hear a word connector in a tool compared to an MCP, what would you prefer?

46:32 - 46:35

Akshat Bahety: Connected on MCP, just think from a normal user perspective.

46:37 - 46:38

Akshat Bahety: Tell me.

46:38 - 46:52

Akshat Bahety: Right? Right in the chat, connector or MCP, right? Right? Like, 99% of you would obviously like to choose the word connector, and as a product manager, or as a person who's building the product, they should obviously write connectors. MCP is too technical for someone who's not learning about it.

46:52 - 46:58

Akshat Bahety: Okay? So, you have to utilize, like, you know, again, connector, and that is why they just call it. All these connectors on the backend are MCPs.

46:59 - 47:13

Akshat Bahety: Okay? That's it. So, this whole debate about, like, you know, what is this, what is that, thanks for that. I will explain you the difference between plugins and stuff like that, don't worry. We will come to that, but right now you need to understand, most of these connectors are just on the backend, just very simply.

47:13 - 47:15

Akshat Bahety: LimCB.

47:15 - 47:24

Akshat Bahety: Now, we're going to take this up a notch, right? Again, I'm going to take, like, you know, this probably, like, you know, a couple of steps ahead, and we're going to utilize a combination of connectors, okay? I'm going to use a...

47:25 - 47:39

Akshat Bahety: My bad, I'm going to use a combination of MCPs. But let's come back here, right? So we created... we created a video, right, and we connected. Now the point is, you

understand that you can use any number of MCPs with Claude. You can connect any number of MCPs with Claude.

47:39 - 47:42

Akshat Bahety: Okay, so I'm going to write Claude.

47:42 - 47:44

Akshat Bahety: Right? I'm going to write Claude.

47:44 - 47:49

Akshat Bahety: And you can connect, as we did right now, you can connect to multiple routes. We connected to Higgs field.

47:50 - 47:57

Akshat Bahety: Right? We connect it to Higgs field, and the way this connection works... is WIL and MCP?

47:57 - 48:06

Akshat Bahety: Okay? In the same way, you can connect Claude to other tools also, right? You can connect Claude to other tools. For example, you can connect to a tool called FireCrawl.

48:07 - 48:12

Akshat Bahety: Anyone who has heard the word fire crawl? Have you used fire crawl? Have you heard about fire crawl?

48:15 - 48:29

Akshat Bahety: Yes, no, okay. Fire crawl is a simple place to... technically, it's a scraper. It is a web scraper. What does scraping mean? Very simply, scraping means to actually have, like, you know, again, one after the other.

48:30 - 48:37

Akshat Bahety: like, you know, again, you can scrape different websites, you can scrape different places, and you can just ask it to scrape whatever you want. So if you wanted to scrape, like, you know.

48:38 - 48:40

Akshat Bahety: I don't know. Let's say.

48:40 - 48:53

Akshat Bahety: probably, like, some website. I don't have, like, again, I'm running out of ideas. So, let's say Times of India, right? This is a newspaper website, and you wanted to scrape that, right? You can ask it to scrape it, and FireCrawl will just go ahead and scrape it, okay?

48:53 - 48:59

Akshat Bahety: So the idea is that Firecrawl can be used to scrape different, like, you know, websites and go from there.

49:01 - 49:06

Akshat Bahety: So, the idea is that it can scrape anything on the web and go from there.

49:06 - 49:21

Akshat Bahety: So the goal of Firecrawl is to just... what does scraping mean? Scraping means it will just extract information from this website. It will extract information from the website. What does that mean? It can go ahead and, like, you know, read all of these news and bring you back data.

49:21 - 49:32

Akshat Bahety: We'll show an example, don't worry. I'll show you an example, don't worry. We'll come back to that, all of those things. But this is just a newspaper website, and you can scrape means you can just get all the information from this web page using FireCrawl.

49:33 - 49:45

Akshat Bahety: Okay? So, file crawl helps you to scrape data, which is very simply saying, getting data from different websites. Scraping data, getting data from different websites.

49:46 - 49:46

Akshat Bahety: Okay.

49:48 - 49:56

Akshat Bahety: So this is how FireCrawl works. Now, why am I telling you all of this about FireCrawl? Because we are going to utilize this, okay? We are going to utilize this to do some stuff.

49:58 - 50:08

Akshat Bahety: Few websites stop scraping, yes, but Firecrawl has ways to bypass it. Anything that can stop something, there is always another way to do it. Remember that, okay?

50:08 - 50:14

Akshat Bahety: So, you can connect this with N number of tools, you have the understanding, and we are going to utilize this.

50:14 - 50:19

Akshat Bahety: Everyone clear with fire crawl? Write fire in the chat, if you are clear with it.

50:22 - 50:26

Akshat Bahety: Yes, it's a simple scraping tool, like nothing else. It's a scraping tool.

50:28 - 50:38

Akshat Bahety: Okay? Tools like APFI, others, everything, it's all scraping rule. Firecrawl is just better at it, because it uses quite a good amount of AI, and also, they've been able to really pull it off.

50:39 - 50:40

Akshat Bahety: Okay, perfect.

50:40 - 50:43

Akshat Bahety: So we have fire call, and we have X field. Now.

50:44 - 50:53

Akshat Bahety: I believe a lot of you, obviously, how many of you want to, like, you know, kind of, like, run a business with AI, or do some kind of, like, you know, service with AI, or an agency with AI?

50:54 - 51:01

Akshat Bahety: Let's be honest, right, again, like, you know, we are all friends here, right, again, like, you know, so yeah. I see a lot of me, me, yes, right again.

51:01 - 51:04

Akshat Bahety: Now, what do you think is one of the most,

51:05 - 51:07

Akshat Bahety: Difficult things to right now in the world to do.

51:07 - 51:11

Akshat Bahety: What is one of the most difficult things in the digital world to do right now?

51:13 - 51:16

Akshat Bahety: Yeah, someone already, like, again, wrote a great answer.

51:19 - 51:22

Akshat Bahety: Yes, quite a bit of you have got it, right?

51:22 - 51:29

Akshat Bahety: Yes. Someone wrote a perfect answer. I'm sorry I missed the name, but yes, it is about... getting attention.

51:31 - 51:32

Akshat Bahety: It is getting attention.

51:33 - 51:36

Akshat Bahety: Getting people hooked is the still...

51:37 - 51:39

Akshat Bahety: Probably the most difficult thing right now.

51:40 - 51:49

Akshat Bahety: Because building has got easier, right? Building tools, you can already use AI to build tools. And I can tell you, like, you know, again, I found a really amazing tweet right now.

51:50 - 51:52

Akshat Bahety: And I'll show you that in one of the other use cases.

51:53 - 51:56

Akshat Bahety: Getting attention is, at least right now, there is some mystery to it.

51:57 - 52:16

Akshat Bahety: Okay? There is some mystery to it. Okay? There is no perfect science, because it's human psychology, right? Again, what might find it attractive to someone is completely dependent on human psychology. But you still have some creators, like MrBeast and everyone, who exactly know how to always create a video which gets, like, tens of hundreds of millions of views.

52:16 - 52:24

Akshat Bahety: Right? So there is some science to it, you just need to spend time to learn science. But for now, a good, easy way to get attention is to create

52:25 - 52:28

Akshat Bahety: Great launch video.

52:28 - 52:29

Akshat Bahety: Would you agree?

52:29 - 52:32

Akshat Bahety: They're creating, like, you know, again, getting, like, you know, again...

52:34 - 52:47

Akshat Bahety: getting, like, a launch video, yes? Like, it's still a crazy way to, like, you know, you would still see so many great launch videos coming in, right? So, we're going to, like, you know, get one of the most, I'll show you a couple of good advertisements by the time we switch to this.

52:48 - 52:54

Akshat Bahety: So for now, I'm going to give you, like, a simple example. Let's say you are someone who wants to run a marketing agency. You want to technically

52:55 - 52:58

Akshat Bahety: create launch videos. You want to create launch videos.

52:59 - 52:59

Akshat Bahety: 4.

53:00 - 53:02

Akshat Bahety: companies, right? And...

53:03 - 53:13

Akshat Bahety: you want to charge them for it, right? But for them, like, you know, technically, for creating those launch videos, you obviously want people to, like, you know, know you, you need to showcase work. If you're not in that industry, you have to showcase work.

53:13 - 53:27

Akshat Bahety: So we are going to use these MCPs connected together, to actually see how this use case can be done, using just AI, just Claude and us, okay? And I'm going to pick up Nike as an example. We're going to create a launch video for Nike, so...

53:27 - 53:34

Akshat Bahety: In case someone doesn't know Nike, which I don't think would be the case, but I'm still going to show you this amazing, like, you know.

53:34 - 53:41

Akshat Bahety: Shoe company, right, again, probably one of the most famous shoe companies across the world. We're going to create a launch video for them.

53:41 - 53:42

Akshat Bahety: Okay.

53:43 - 53:43

Akshat Bahety: Good.

53:44 - 53:48

Akshat Bahety: So we are going to just figure out how to do it. Let's go to Claude, and we'll pick it up.

53:50 - 53:53

Akshat Bahety: And I'm going to switch my screen.

53:57 - 54:00

Akshat Bahety: And we're at Claude, and we're going to do this. So, let's come here.

54:01 - 54:02

Akshat Bahety: And we are going to select...

54:05 - 54:14

Akshat Bahety: we're going to see... I'm going to show you, like, you know, different connectors. So we already have FireCrawl, right, which I already added, right? It's the same way of adding these things, and I already have Higgs field.

54:14 - 54:31

Akshat Bahety: And now I'm going to ask Claude to actually help me generate this launch video. But for that, I also want to ensure that if you think about it, Nike will already have brand guidelines, right? Do you believe Nike has good, high-quality brand guidelines? Like, they have rules on what can be in their launch video, what can't be?

54:31 - 54:35

Akshat Bahety: Like, you know, Apple has this crazy rule that they're...

54:35 - 54:42

Akshat Bahety: phones or, like, any tools can't be used by criminals in any movie. Like, you can't have the villain using Apple.

54:43 - 54:44

Akshat Bahety: You know there is this crazy rule.

54:44 - 54:53

Akshat Bahety: Right? So, probably Nike won't have that, right? Nike will probably have something else, I don't know, right? But that's a crazy rule that they have. So, you will never see,

54:53 - 55:03

Akshat Bahety: a villain having an app enrollment. So that's what we're going to do, right? Again, we're going to ask Claude to use FileCrawl to get us the brand guidelines, and then help us create a launch video. So let's go ahead.

55:04 - 55:12

Akshat Bahety: I want you to use Firecrawl to get Nike brand guidelines. These brand guidelines should be related to their video content so that I can create a launch video

55:12 - 55:34

Akshat Bahety: for them, using Higgs field. So first, I wanted to go ahead and scrape, like, you know, again, information from Firecrawl for Nike on different brand guidelines and what is available. And second, I wanted to go ahead and then generate a pitch for the video that we can create. I want it to be realistic, so probably people running with shoes, right, again, and obviously, like, you know, something fun. And you are going to be an example on that, and then go from there.

55:36 - 55:37

Akshat Bahety: Okay, simple.

55:41 - 55:57

Akshat Bahety: Is the prompt easy to understand? We're going to use Firecrawl to get brand guidelines. Yes, write simple in the chat, if you're clear. Simple prompt, not super difficult, like, there's nothing in the prompt, actually. Okay? So, with this, we're going to go ahead, press enter, and let it run.

55:58 - 56:17

Akshat Bahety: Now, it's going to go ahead and start, obviously, like, you know, researching for video guidelines. Now, all the things that you guys are talking about, like, you know, Akshat, what about the companies that stop scraping? The companies that stop, like, you know, again, us to, like, you know, log in before everything? That is not your job to figure out. You are going to use Firecrawl. It's Firecrawl's job to figure all of that out.

56:17 - 56:18

Akshat Bahety: It's not your job.

56:18 - 56:34

Akshat Bahety: So FireCrawl will go ahead and figure all of this out, right? It will go ahead how to scrape. You don't have to become an expert at scraping. You don't have to understand what to do, how to get unblocked. That is Fire Crawl's job. That is, like, that tool is not, like, it has a really good free plan, right?

56:34 - 56:40

Akshat Bahety: But you pay for that tool if you're using it a lot. So it's their job to figure it out and let them figure it out, okay?

56:43 - 56:44

Akshat Bahety: Okay.

56:44 - 56:58

Akshat Bahety: Yeah, you don't even have to mention Nike's website, you don't even have to do anything. It will go ahead and figure out everything. You can see it is already going out and doing everything. And I just want to, like, you know, again, until this is... can we let it run? Can we let it run for a second, and you guys can all pay attention here, right?

57:00 - 57:01

Akshat Bahety: So...

57:01 - 57:12

Akshat Bahety: That is how you have to use AI. If you're still sitting, and like, you know, again, we are sitting here, and like, you know, again, looking at the screen, the job of the AI is to give you back more time, like, more time than you will ever have.

57:12 - 57:16

Akshat Bahety: Because you should be able to use AI,

57:16 - 57:25

Akshat Bahety: to actually, like, you know, do everything. And if you connect the right tools and everything else, that's how you should work. I have been able to decrease the amount of work that I have to do, but increase my output just with AI.

57:25 - 57:26

Akshat Bahety: Okay.

57:27 - 57:29

Akshat Bahety: And that's what you need to remember. So...

57:29 - 57:36

Akshat Bahety: like, you know, again, there are some rules that they have added, right? Again, we have got the rules. I'm not going to understand the rules, right? And...

57:36 - 57:44

Akshat Bahety: Let's see what happens. So, it has given us a shot level ID. Also, you can see it has created shots, right, on what is going to happen at every second, right?

57:45 - 57:48

Akshat Bahety: So... I'm just going to, like, you know, again.

57:49 - 57:53

Akshat Bahety: I am, like, again, just going to say whatever is pitched, just create that.

57:53 - 57:57

Akshat Bahety: And I'm going to say the Hiroshoe shot. I don't know if this is going to work out.

57:57 - 57:58

Akshat Bahety: Okay.

57:59 - 58:07

Akshat Bahety: So, it will go ahead and create this. I don't know what's going to come out, right? We don't have actually any idea, but it will be fun. So, let's see what comes out.

58:10 - 58:14

Akshat Bahety: Do you have a system prompt which is set? No. There's nothing, this is just, like, it just knows about me, that's all.

58:25 - 58:30

Akshat Bahety: Okay, so there's apparently, like, a rule, some level of rule, that you can't use their logo without their approval.

58:31 - 58:41

Akshat Bahety: Okay? Something like that. If there is a, like a... if there is a Nike logo which is not properly visible, you can't create it, okay? So, none of these shoes has something, that's great, right? And...

58:42 - 58:49

Akshat Bahety: I'm just going to say, I will not be able to make any more decisions. Create the video as what you believe would be the right version.

58:50 - 58:50

Akshat Bahety: Okay.

58:51 - 58:57

Akshat Bahety: So I'm going to let it go ahead and create it. Do you guys believe good images? Good images of the shoes? Quite good, right?

58:57 - 59:16

Akshat Bahety: Like, quite beautiful. Like, if you think about it, like, this is one-shotted without any prompts given by us. Everything created by Claude, right? We are just orchestrating. You are... think about... think in terms of being a manager, right? Think in terms of being a manager, a good manager, right? Don't bully AI. So, have fun, like, you know, again, and let it build this. Let's see what happens.

59:20 - 59:21

Akshat Bahety: Okay.

59:23 - 59:41

Akshat Bahety: It's creating multiple videos. You can see it is creating multiple videos, because it has automatically figured out that some of these models only allow for 3 to 5 seconds of videos, okay? It only allows for 3 to 5 seconds of videos. So, it's going to probably create a couple of them, it's going to create one after the other, and let's see what comes out together.

59:42 - [01:00:01]

Akshat Bahety: Okay? Now, everyone who's asking me about cost, I'm right now not paying attention to the cost. You can see in your Higgs field how many credits you have spent. I'm not going to do that. The goal is to get something output as a credit. And just think about it, you are trying to create a brand film for Nike. A brand film for Nike costs something in millions of dollars.

[01:00:02] - [01:00:08]

Akshat Bahety: So if you're able to create something for even \$10, \$20, I don't know what the cost is, I'm just putting out a number.

[01:00:08] - [01:00:09]

Akshat Bahety: I think it's a good bargain.

[01:00:10] - [01:00:27]

Akshat Bahety: Okay? So, really, like, you know, again, just, like, I know that everyone thinks a lot about cost, which is super important, but for personal use cases, and when you're trying things with AI, I have a simple rule, and I would love all of you to adopt this rule. Have a budget in mind a month.

[01:00:27] - [01:00:43]

Akshat Bahety: And make sure to spend it all on AI. Whatever it is. It could be... it could be \$5, it could be \$10, it could be \$20, it could be whatever that amount is. Keep that in a month, and spend it on AI. You are going to do yourself a disservice if you don't learn these AI tools, just thinking that it will cost a lot.

[01:00:44] - [01:00:59]

Akshat Bahety: Some of them are probably, like, most of them are available for, like, \$5, \$10, \$20 as starter plans. Just go ahead and do that. Like, really, I can... I'm not making any recommendations to get Higgs field, but it's up to you. What... don't try to optimize for cost when you're trying to learn.

[01:01:00] - [01:01:08]

Akshat Bahety: Right? You optimize for that once you're already an expert. Experts exist for this reason, to optimize on things. Don't optimize at start, okay?

[01:01:08] - [01:01:15]

Akshat Bahety: Perfect. So, it's going to take some time, we are going to let it run. In this meantime, because it's going to take probably, like, around 5 to 10 minutes.

[01:01:15] - [01:01:29]

Akshat Bahety: Can we switch, and I can show you another cool thing, probably, like, you know, again, not just directly with MCPs, but also something, like, you know, again, I want to show in ChatGPT, and we want to, like, you know, cover a couple of things that are there. Yes? Agreed?

[01:01:30] - [01:01:31]

Akshat Bahety: Can we do?

[01:01:31] - [01:01:52]

Akshat Bahety: Yes, we'll switch, we will let this generate, right? So we will let this generate, we will not, like, you know, I'm not letting this stop. So, when I switch context, don't come and tell me that, like, you know, Akshat, where did we go, what were we doing, what happened to Claude? It's running in the background, okay? I think we already have the video, so we don't have to switch. But yeah, it's going to take time, it's going to generate all the other videos also, it's going to basically take some time, okay?

[01:01:53] - [01:02:00]

Akshat Bahety: Perfect. So, we're going to switch... we're going to switch context, and we're going to switch context to just, like, you know, for the 5 minutes that it's going to generate.

[01:02:01] - [01:02:03]

Akshat Bahety: Let's come to Choud GPT.

[01:02:04] - [01:02:08]

Akshat Bahety: We have a quite packed session today. We have quite a lot of things to cover, so we're going to have fun.

[01:02:10] - [01:02:10]

Akshat Bahety: No.

[01:02:11] - [01:02:16]

Akshat Bahety: We have ChartGPT, and I want to showcase to you one of the most

[01:02:17] - [01:02:19]

Akshat Bahety: You can say, coolest features, right?

[01:02:19] - [01:02:25]

Akshat Bahety: the feature, and also, like, you know, how you can use... make the best use of it. Okay? Let's try to do that.

[01:02:25] - [01:02:30]

Akshat Bahety: Yes, I'm just going to open an old chat, because I already have something that was running.

[01:02:31] - [01:02:46]

Akshat Bahety: Okay, so I have a chat here, right, where I've already logged in into Twitter, okay? I've already logged in into Twitter, and you can see, like, you know, again, all the things

that are happening. iPhone got launched today, right? Again, as you can see, across the world, everyone is trying to get an iPhone.

[01:02:46] - [01:02:53]

Akshat Bahety: I completely don't get the hype, but let's look at this right, okay? Now, I have Twitter logged in, and I want to technically, like, you know, again.

[01:02:54] - [01:03:03]

Akshat Bahety: try something new. You can see I, like, you know, again, I asked it to scroll Twitter for me if I log in. So I logged in, what I wanted to do is, I wanted to go through

[01:03:03] - [01:03:14]

Akshat Bahety: my feed, and create 3-4 replies, okay? Create 3-4 replies for one of these products. How many of you want to increase your following on Twitter? How many of you want to increase your following on Twitter?

[01:03:15] - [01:03:24]

Akshat Bahety: Yes, yes, right. Now, do you know that there is a term called reply guy? There is a term called reply guy. Like, you just have to reply to a lot of tweets to get followers, yes?

[01:03:25] - [01:03:26]

Akshat Bahety: Now...

[01:03:26] - [01:03:30]

Akshat Bahety: Twitter recently blocked a lot of APIs that were doing it, so we're going to use AI to do it.

[01:03:31] - [01:03:32]

Akshat Bahety: So, I'm going to go ahead and say this.

[01:03:33] - [01:03:35]

Akshat Bahety: I want you to go through

[01:03:35] - [01:03:42]

Akshat Bahety: like, you know, 5 of the most interesting tweets around AI and finance, and create replies to them in Twitter so that I can post them.

[01:03:43] - [01:03:44]

Akshat Bahety: Okay.

[01:03:45] - [01:03:47]

Akshat Bahety: So this is going to be the prompt.

[01:03:47] - [01:04:06]

Akshat Bahety: This is going to be the prompt, right? We are going to ask it to post it. Now, just to give you an understanding, okay, let me do this from scratch. So, if you want to log in into Twitter, you can just click on this, you go to work mode, and you can click on this... you can see this, you... do you see this small toggle? You can click on this, and just...

[01:04:06] - [01:04:08]

Akshat Bahety: open Twitter, right? That's it.

[01:04:08] - [01:04:18]

Akshat Bahety: Like, I've already logged in, so when you log in for the first time, it will ask you to log in, right? But very simply, I have this, I have Twitter logged in, and I'm just going to ask it to...

[01:04:18] - [01:04:19]

Akshat Bahety: do some stuff.

[01:04:21] - [01:04:35]

Akshat Bahety: I think some of you have not understood how this works. I'm going to explain this again. We're in ChatGPT, we are on the work mode, and here I have, on my right-hand side, there is a panel. There is a toggle panel, which opens a browser.

[01:04:36] - [01:04:46]

Akshat Bahety: So, ChatGPT recently released an inbuilt browser. They released an inbuilt browser. I don't know if it's only available on paid plans, but it is there.

[01:04:46] - [01:04:55]

Akshat Bahety: So, in this browser, it works like any normal browser. You can go and search for Google, you can search for anything, it is available in the ChatGPT store.

[01:04:56] - [01:04:56]

Akshat Bahety: Okay?

[01:04:57] - [01:05:07]

Akshat Bahety: Now, we are going to use this tool, and I'm going to give ChatGPT access to my Twitter account to do things. I'm going to give ChatGPT access to my Twitter account to do things.

[01:05:08] - [01:05:13]

Akshat Bahety: Okay? I already logged in into Twitter before the session, because I don't want to share my password with all of you.

[01:05:14] - [01:05:18]

Akshat Bahety: Okay? So I already logged in into Twitter for... before the session.

[01:05:18] - [01:05:23]

Akshat Bahety: Clear? Now you know how I got here. Everyone is clear, everyone is clear, right clear in the chart.

[01:05:25] - [01:05:25]

Akshat Bahety: Okay.

[01:05:27] - [01:05:35]

Akshat Bahety: This is happening, again, to be very sure, this is happening within the ChatGPT app. This is happening within the ChatGPT app that we have here, okay?

[01:05:36] - [01:05:47]

Akshat Bahety: Perfect, thank you so much. Okay. So, I already logged in before, I already have Twitter logged in, right? And we're going to go ahead and start asking it to do something.

[01:05:48] - [01:05:56]

Akshat Bahety: I want you to go through my Twitter feed, and pick up one tweet which you find is very interesting, and create a reply for it.

[01:05:57] - [01:06:06]

Akshat Bahety: Okay? Simple, pretty simple prompt, what we want to do. I want you to go through my Twitter feed and pick up one tweet. Now, just to be very clear.

[01:06:06] - [01:06:08]

Akshat Bahety: My hands are off the table, right? And...

[01:06:09] - [01:06:14]

Akshat Bahety: ChatGPT is automatically going to take it up and go through my Twitter feed by itself.

[01:06:15] - [01:06:26]

Akshat Bahety: It is going to automatically go through my Twitter feed by itself. I don't need to do anything, it will automatically go ahead and see different posts. It will create a reply if it needs to, and it will do everything.

[01:06:26] - [01:06:37]

Akshat Bahety: Okay? There is no need for any connector, there's no need for anything. This is a feature that ChatGPT released recently, right? When I say recently, it's been a month or so, or probably a bit more.

[01:06:37] - [01:06:51]

Akshat Bahety: It's already automatically doing everything. You can see, like, you know, again, it's saying, like, you know, again, it's checking the feed layout, it is running a command, it is looking at things. You can see I'm not running... I'm not scrolling, okay? It is automatically scrolling it by itself.

[01:06:51] - [01:06:58]

Akshat Bahety: I am not scrolling, like, literally, I just... that's why my hands are in front of your screen, so you can see. It's automatically scrolling one by one.

[01:06:59] - [01:07:13]

Akshat Bahety: And that is the power of using something like, you know, again, like this, for technically doing what we call as computer tasks, right? And the skill is called computer use. It can use your own computer, like it is using its own browser.

[01:07:14] - [01:07:16]

Akshat Bahety: And it can automatically be done.

[01:07:17] - [01:07:21]

Akshat Bahety: Okay? You can see, I'm not doing anything, and it will keep doing this until it finds something.

[01:07:22] - [01:07:26]

Akshat Bahety: I have not told it what is interesting. I don't know what it will choose. It will probably pick up something.

[01:07:27] - [01:07:28]

Akshat Bahety: Okay?

[01:07:28] - [01:07:35]

Akshat Bahety: Do you understand the power of doing this? You can do this for LinkedIn, you can do this for any website that exists in the world.

[01:07:36] - [01:07:40]

Akshat Bahety: You can do this on any website that exists in the world.

[01:07:42] - [01:07:43]

Akshat Bahety: Okay.

[01:07:44] - [01:07:52]

Akshat Bahety: I'm running this on my ChatGP desktop, so this is on my desktop, right? And you have the access to the browser within it.

[01:07:52] - [01:07:53]

Akshat Bahety: Okay.

[01:07:58] - [01:08:12]

Akshat Bahety: Again, we don't care about what it is going to select, I'm just going to show you, like, again, how it works and what it is able to do. So you can see it created a... you can see it created a response to the tweet, right? Now I'm going to ask it to automatically post it.

[01:08:12] - [01:08:13]

Akshat Bahety: Okay?

[01:08:13] - [01:08:19]

Akshat Bahety: I want you to take this tweet and reply to the tweet automatically.

[01:08:24] - [01:08:33]

Akshat Bahety: Okay, I'm going to answer a couple of questions, give me one minute, let's just see, let this complete, let us complete the demo, and I'm going to answer your questions about, like, you know, again, scraping and everything else, and how this is working.

[01:08:35] - [01:08:37]

Akshat Bahety: Okay, how many of you know that

[01:08:38] - [01:08:44]

Akshat Bahety: When you open a link on your phone, how many times does it open automatically from your phone in the browser, in the app itself?

[01:08:44] - [01:08:54]

Akshat Bahety: Like, when you click on, like, you know, WhatsApp or, like, a link in LinkedIn, it opens within LinkedIn app, right? It doesn't take you to Twitter, it doesn't take you to a browser. How many of you think... have noticed that?

[01:08:58] - [01:09:00]

Akshat Bahety: Right? It's something similar here.

[01:09:01] - [01:09:03]

Akshat Bahety: Okay? Okay, so let it, like, you know, again.

[01:09:03] - [01:09:07]

Akshat Bahety: Let it write the tweet, and it is automatically working, right? Again, so...

[01:09:11] - [01:09:24]

Akshat Bahety: Okay? So it does automatically draft the reply. I'm just going to post this. I can post it myself, or I can let AI post it, but I can also just reply. You can see it all... automatically... you can see a small, like, you know.

[01:09:25] - [01:09:30]

Akshat Bahety: Can you see a small arrow there? You were there, there was a small arrow there, okay, and I can look in again.

[01:09:31] - [01:09:34]

Akshat Bahety: I'm just going to, like, you know, again, I'm just going to apply for this, and I'm going to put in there.

[01:09:35] - [01:09:36]

Akshat Bahety: Okay, good.

[01:09:36] - [01:09:37]

Akshat Bahety: Now...

[01:09:38] - [01:09:50]

Akshat Bahety: Couple of questions. First of all, I am on my ChatGP desktop app. This is my desktop app, this is not on the browser, it is on the ChatGPT desktop app that you can download. Go ahead to ChatGP.com and download it, that's it.

[01:09:51] - [01:10:02]

Akshat Bahety: Once I have this Choud JB desktop app, everything works like a normal browser, okay? Everything works like a normal browser. Normal browser means anything that you can do on Chrome, you can do here. Like.

[01:10:02] - [01:10:06]

Akshat Bahety: You get the idea, like, again, like, you know, like, 90% of things.

[01:10:06] - [01:10:20]

Akshat Bahety: Okay? So if you want to open LinkedIn.com, you can open that. You can open anything, it's completely up to you. You can open LinkedIn.com, you can do... you can log in into LinkedIn and do this. Okay, I'm not going to sign in into LinkedIn right now, because I don't want to share my details and everything else, okay?

[01:10:20] - [01:10:26]

Akshat Bahety: You can go into Gmail, you can go into, like, you know, again, you can go to any website and log in.

[01:10:26] - [01:10:27]

Akshat Bahety: Okay?

[01:10:27] - [01:10:31]

Akshat Bahety: So the way it works is that you have a browser.

[01:10:31] - [01:10:34]

Akshat Bahety: That works normally as anything else.

[01:10:34] - [01:10:38]

Akshat Bahety: just think that ChatGPT can control your Chrome browser, it's what is happening here.

[01:10:39] - [01:10:43]

Akshat Bahety: Can it... if it can open on a browser, it can go there.

[01:10:43] - [01:10:44]

Akshat Bahety: Okay.

[01:10:45] - [01:10:48]

Akshat Bahety: Is that clear? Is the understanding clear?

[01:10:50] - [01:10:57]

Akshat Bahety: How does, like, again, this work? You can open any browser, write browser in the chat, if you understood this. Write browser in the chat, if you understood this.

[01:11:01] - [01:11:10]

Akshat Bahety: Okay? For everyone asking, can Claude do something similar? Not as good as right now, right? Not as good as ChatGPT. They don't have a similar version of this. Okay.

[01:11:11] - [01:11:12]

Akshat Bahety: So...

[01:11:13] - [01:11:31]

Akshat Bahety: if someone has never used this option, that's why now you can use it, okay? So, OpenAI has this quite a great thing. You can use, like, you know, again, you can use a browser, and you can, like, you know, obviously, like, you know, again, go ahead and use it as much. Anything can be opened up, so if you can open a website on your Chrome, and you can open it here, you can open the same thing anywhere else also.

[01:11:31] - [01:11:33]

Audio shared by Akshat Bahety: Okay.

[01:11:34] - [01:11:36]

Audio shared by Akshat Bahety: Clear?

[01:11:37] - [01:11:39]

Akshat Bahety: Good to go. Understood.

[01:11:42] - [01:11:43]

Akshat Bahety: Okay.

[01:11:46] - [01:11:48]

Akshat Bahety: Clear? Yes.

[01:11:52] - [01:11:57]

Akshat Bahety: Okay, now let's go back to Claude. We are clear, how does browser use work?

[01:11:58] - [01:12:03]

Akshat Bahety: Any more use cases? Okay, yeah. Let's, like, you know, again, let's take up one more thing, so...

[01:12:04] - [01:12:15]

Akshat Bahety: How many of you want to... then we all want to become, like, you know, you all want to obviously create, like, you know, write a lot of tweets. Would it make sense to, like, open ChatGPT every day and write... ask it to write 5 tweets, or you want to automate this?

[01:12:17] - [01:12:18]

Akshat Bahety: Do you want to automate this?

[01:12:19] - [01:12:20]

Akshat Bahety: Yes?

[01:12:22] - [01:12:26]

Akshat Bahety: how will we automate this? We can just ask... let's just ask ChatGPT, okay?

[01:12:27] - [01:12:31]

Akshat Bahety: So... I want you to create a scheduled routine that

[01:12:32] - [01:12:36]

Akshat Bahety: looks into my Twitter feed every day, and sends me the 5 top tweets.

[01:12:37] - [01:12:39]

Akshat Bahety: That I can reply to.

[01:12:39] - [01:12:40]

Akshat Bahety: Okay.

[01:12:45] - [01:12:50]

Akshat Bahety: Simple, simple answer. I just wanted to find 5 tweets and send me.

[01:12:50] - [01:12:51]

Akshat Bahety: Right?

[01:12:53] - [01:12:55]

Akshat Bahety: Does this make sense?

[01:12:57] - [01:13:15]

Akshat Bahety: Why not under schedule? I don't know, like, again, it will automatically pick it up, right? One thing that you need to understand with all the new tools that are coming in, don't try to decide which is going to be the best option to do, right? Again, so for example, it's using Codex Automation, it wants to use anything else, it's up to it. You want a scheduled routine that just sends you an email. You just want a scheduled routine that replies to 5 tweets.

[01:13:15] - [01:13:19]

Akshat Bahety: Don't worry about what option ChatGPT wants to take it, okay?

[01:13:19] - [01:13:27]

Akshat Bahety: You can ask it to create new tweets. Just, guys, everyone. You can ask it to do anything. I am doing a use case that makes sense for me.

[01:13:27] - [01:13:32]

Akshat Bahety: Okay? I am doing a use case that makes sense for me. Okay? Does that make sense? Clear?

[01:13:33] - [01:13:46]

Akshat Bahety: Just a simple example, okay? Just focus on the outcome. AI is going to... you know what? How many of you believe that, like, you know, you have 10,000 ideas in a day, and you want to execute all of them? How many of you think that you are an idea person?

[01:13:47] - [01:13:50]

Akshat Bahety: How many of you think that? Like, you believe, like, you have so many different ideas that you want to explore?

[01:13:51] - [01:13:57]

Akshat Bahety: Yes, write idea in the chat. Like, you know, let's, like, you know, for one second, let's pause this. How many of you think that is the case?

[01:13:58] - [01:14:03]

Akshat Bahety: Right? You have ideas that you want to execute, right? You know what the problem was before AI?

[01:14:03] - [01:14:14]

Akshat Bahety: every time you had an idea, to execute it, you needed ideas through things. Either you needed amazing amount of skills and time, or you needed to be super rich so that you can hire other people to follow your ideas and do ideas that you want, correct?

[01:14:14] - [01:14:16]

Akshat Bahety: After AI?

[01:14:16] - [01:14:24]

Akshat Bahety: The reality is that, like, you know, again, you don't need to worry about execution. You need to worry about running AI into running those ideas.

[01:14:25] - [01:14:27]

Akshat Bahety: And I'm giving you the playbook.

[01:14:27] - [01:14:33]

Akshat Bahety: Everyone, like, again, everything that you learn in the next 14 days and everything else is just, like, you'll learn... you'll get the playbook.

[01:14:33] - [01:14:39]

Akshat Bahety: The playbook is to become the manager, to become a person who runs agents, and they do a lot of it.

[01:14:40] - [01:14:59]

Akshat Bahety: So, don't spend so much time understanding, okay, why this, why not this, right, again? Are the... until and unless, right, again, you want to become, like, you know, I don't know, like an engineer, like, you know, and when I say an engineer, I'm talking about, like, you know, again, you want to build these tools, you want to, like, you know, go ahead and build this for, like, you know, another organization or something like that, right, again.

[01:14:59] - [01:15:06]

Akshat Bahety: Maybe yes, then you probably need to understand differently. Until and unless, other than that, the best option, even in that organization, you'll be using AI.

[01:15:07] - [01:15:11]

Akshat Bahety: Okay? So the reality is that if you have an idea, you can use AI to execute a lot of it.

[01:15:12] - [01:15:22]

Akshat Bahety: Okay? Just focus on the outcome. Okay? So we come back, we'll show what happened, but understand on the outcome, because the outcome is so much more important.

[01:15:22] - [01:15:23]

Akshat Bahety: Okay.

[01:15:24] - [01:15:43]

Akshat Bahety: Okay, coming back. After that, let's come back to Chidd. So you can see, it has created a routine, it has created a routine that is going to automatically review my home feed, and it is going to send me 5 high-quality opportunities. You can see this is the routine that it has created, right? Open the user's feed, it has automatically created what I need to do.

[01:15:43] - [01:15:49]

Akshat Bahety: it has automatically created the prompt, it will automatically do everything that is needed. And now.

[01:15:50] - [01:16:00]

Akshat Bahety: it will run every day at 9am. Now, I don't want it to run at 9am, nobody's writing good tweets at 9am, right? Probably evening is a better time. I can switch the time that I need to.

[01:16:00] - [01:16:09]

Akshat Bahety: Okay? And I can send out, like, you know, updates or whatever I want, and it's super simple. It has just created a routine for me that will work automatically.

[01:16:09] - [01:16:10]

Akshat Bahety: Make sense?

[01:16:11] - [01:16:15]

Akshat Bahety: Simple enough. Can you write... can everyone prompt to create a routine now?

[01:16:15] - [01:16:19]

Akshat Bahety: Write routine in the chat, even prompt to create a routine.

[01:16:20] - [01:16:23]

Akshat Bahety: Yes? Perfect. Amazing.

[01:16:23] - [01:16:29]

Akshat Bahety: Now, just in case you want to see where all your routines and everything else is, right?

[01:16:30] - [01:16:40]

Akshat Bahety: If you want to see where everything, all of these tasks, schedule tasks and routines are running, you can click on... let me open, my PC has got slow for some reason, I don't know why.

[01:16:41] - [01:16:49]

Akshat Bahety: Alright, you can come to Scheduled, you can click on Scheduled on the left-hand side in CHPD, and you can see all of these routines.

[01:16:49] - [01:16:50]

Akshat Bahety: Okay.

[01:16:51] - [01:16:53]

Akshat Bahety: Simple, makes sense.

[01:16:54] - [01:16:55]

Akshat Bahety: Yes.

[01:16:55] - [01:17:03]

Akshat Bahety: Now, these routines, right again. Cha JP will send you a notification on your browser also, right again. Right now.

[01:17:03] - [01:17:19]

Akshat Bahety: Right? Again, you can use Pral, like, 7.30, set up a time that works for you, and go from there. Okay, and you can see there are, like, so many different routines that I had. I had... one of my favorite routines was send India top headlines every day for 10.45 AM. I was using this for around a year.

[01:17:19] - [01:17:23]

Akshat Bahety: And it was pretty great, and it always used to work, okay? So, yeah.

[01:17:24] - [01:17:26]

Akshat Bahety: Okay, good enough.

[01:17:26] - [01:17:31]

Akshat Bahety: Well, can we... let's go back to Claude, let's see our ad, let's see what happened there. Yes, no?

[01:17:33] - [01:17:36]

Akshat Bahety: And let's go back to Claude and create.

[01:17:37] - [01:17:42]

Akshat Bahety: There is no need for a connector for this, okay? There's no need for a connector for this, let's see.

[01:17:44] - [01:17:48]

Akshat Bahety: Okay, I'm going to come back, let's see what Claude has created.

[01:17:49] - [01:17:52]

Akshat Bahety: Okay, so it has generated all the clips.

[01:17:53] - [01:17:57]

Akshat Bahety: And... Can you... Here.

[01:17:58] - [01:18:01]

Akshat Bahety: Can you hear the audio? Yes, I hope so. Wonderful.

[01:18:07] - [01:18:08]

Akshat Bahety: Okay, and then...

[01:18:13] - [01:18:16]

Akshat Bahety: Okay. There is going to be, like, again, one after other.

[01:18:20] - [01:18:22]

Akshat Bahety: Right? And...

[01:18:29] - [01:18:33]

Akshat Bahety: Okay, I'm just going to ask it to merge into a single ad. Merge...

[01:18:33] - [01:18:36]

Akshat Bahety: All of this into a single video.

[01:18:42] - [01:18:45]

Akshat Bahety: Let's see if it can download and merge it into a single video.

[01:18:47] - [01:18:49]

Akshat Bahety: Okay, so let's see.

[01:18:52] - [01:18:55]

Akshat Bahety: Who does the merging? The Higgsville or Claude?

[01:18:55] - [01:18:56]

Akshat Bahety: Okay, let's see.

[01:18:57] - [01:18:58]

Akshat Bahety: It's going to be a mix of them.

[01:18:59] - [01:19:05]

Akshat Bahety: like, it will download from Claude, right, again, and then it will download from Higgs field, and then merge them.

[01:19:06] - [01:19:11]

Akshat Bahety: How did you... what do you guys think about, like, the clips? What... do you think it was a good one? Like, we have 20 seconds worth of it, roughly.

[01:19:12] - [01:19:15]

Akshat Bahety: Yes, let's see, what does the, like, you know...

[01:19:17] - [01:19:28]

Akshat Bahety: Okay, you can see it's, like, Claude is not able to save, so it has asked us to save, right? It's probably, like, somewhere it has to fail, right? Somewhere, Claude will be like, okay, I couldn't do it, and it's fine, I'm just going to...

[01:19:28] - [01:19:37]

Akshat Bahety: I'm going to save it for Claude. I'm just going to download these videos myself, okay? So, we... and you can even see the button is right there, okay? You can just click on download, and we'll be able to do it.

[01:19:38] - [01:19:45]

Akshat Bahety: And I'm just going to create a new folder to download it, so I'm going to create a new folder.

[01:19:45] - [01:19:46]

Akshat Bahety: Nagar.

[01:19:47] - [01:19:48]

Akshat Bahety: And I'm just going to...

[01:19:48] - [01:19:54]

Akshat Bahety: put it. So there is something, like, at least, like, you know, again, where Claude wasn't able to. So we'll download this...

[01:19:56] - [01:20:11]

Akshat Bahety: Is there any connector to merge? You don't need a connector. It will automatically merge. Claude can figure out a lot of things. You don't need to worry about, okay, how will it merge, what will it merge, where the merge will come from. Don't worry about all those stuff. It will automatically happen.

[01:20:15] - [01:20:20]

Akshat Bahety: Okay, I'm... I've downloaded all the videos. Do you think downloading was difficult? Someone would be like, why couldn't Claude do this?

[01:20:21] - [01:20:25]

Akshat Bahety: I believe all of you can download, right? Again, yes? You can download? Agreed?

[01:20:28] - [01:20:37]

Akshat Bahety: Yes? Okay, good. Someone... because I know someone will say, like, you know Akshat, why couldn't... why couldn't Claude download? I don't know, like, again, it failed, it's fine. We are going to move forward with it.

[01:20:38] - [01:20:40]

Akshat Bahety: So, I'm going to give it.

[01:20:40] - [01:20:43]

Akshat Bahety: this, and I'm going to say, here are all the videos.

[01:20:46] - [01:20:49]

Akshat Bahety: Let's see. Now it just needs to merge them.

[01:20:53] - [01:20:54]

Akshat Bahety: The upload is IT.

[01:20:54] - [01:20:59]

Akshat Bahety: Okay, we will attach them, don't worry. We will attach the file so it can do this.

[01:21:02] - [01:21:06]

Akshat Bahety: Because we are in Claude. I am, like, I use Claude code so much that it has access to everything.

[01:21:25] - [01:21:39]

Akshat Bahety: Does it mean we don't need to subscribe to CapCut to stitch all the videos? Everything can be done in Claude. I can tell you, I have met... I work with a lot of businesses, right, again, and I, like, again, there is nothing, there is absolutely nothing that Claude can't do.

[01:21:40] - [01:21:56]

Akshat Bahety: It is... I'll tell you one thing, if someone comes and tells me, Akshat, Claude can't do this, either it is going to be a people-related issue, right? Like, Claude today, honestly, 110% can't go ahead and talk to people. But if it is something behind a screen, I can assure you, if Claude... if you tell me that Claude can't do it.

[01:21:57] - [01:21:58]

Akshat Bahety: It's a skill issue.

[01:21:59] - [01:22:14]

Akshat Bahety: And I'm... when I say Claude, I'm saying, like, you know, again, like, you know, ChatGPT and stuff like that. Except download, yes. If Claude couldn't do that, I can assure you I

will figure out a way. Like, if we give... we'll give it access to our whole computer. So if you were on co-work, Claude was able to do this. We were... because we are on chat, it wasn't.

[01:22:14] - [01:22:19]

Akshat Bahety: Okay? So again, skill issue, right? It's that it can perform it. Claude, you switch to co-work.

[01:22:20] - [01:22:25]

Akshat Bahety: Okay? So, with this, it was able to do this, and we're going to let it continue with this.

[01:22:25] - [01:22:36]

Akshat Bahety: Finding a suitable font and substitute for design. Perfect. Okay. Let it complete this, and then we will see. How did... how many of you did you enjoy the use case?

[01:22:37] - [01:22:41]

Akshat Bahety: Did you enjoy the use case? Yes. Do you understand how to use this?

[01:22:41] - [01:22:42]

Akshat Bahety: Yes?

[01:22:42] - [01:22:47]

Akshat Bahety: How many of you can create videos? Write a video in the chat after this, with this, with this workflow.

[01:22:50] - [01:22:51]

Akshat Bahety: Okay.

[01:22:55] - [01:22:56]

Akshat Bahety: Yes?

[01:22:56] - [01:22:58]

Akshat Bahety: Perfect. Okay. Now...

[01:22:58] - [01:23:07]

Akshat Bahety: Let's see, right, how did the video come out. I'm going to share the video, and I'll also send you all this video, right, as a resource, so you can see the output.

[01:23:08] - [01:23:13]

Akshat Bahety: Okay, let me... We have downloaded this, let me see if we can open this...

[01:23:30] - [01:23:33]

Akshat Bahety: Okay, I'm going to share my screen, let's see how did this come out.

[01:23:52] - [01:23:53]

Audio shared by Akshat Bahety: Good?

[01:23:53] - [01:23:54]

Akshat Bahety: Scale of 1 to 10?

[01:23:57] - [01:23:58]

Akshat Bahety: Yes?

[01:23:58] - [01:24:18]

Akshat Bahety: Yes? Very unrelated clips? Okay, someone... some... see, someone has to, like, again, yeah. It will... it's an ad, it's a pitch, right? It's a pitch that you created, like, again, something like this would have created, like, you know, costed you quite a bit of money, right? Again, think about, like, you know, creating this, editing this, and everything else. It will take at least minimum, like, one whole day of work, if you know already how to do this, okay?

[01:24:18] - [01:24:27]

Akshat Bahety: So, you know, pretty cool, right? Again, I will say on a scale of 1 to 10, it's a... it's a solid 8 to... like, 8 to 10 is probably the right range, okay?

[01:24:29] - [01:24:43]

Akshat Bahety: that one clip spoiled ad as it is meant for India. No, it is not meant... it is, like, again, showing that you can perform any kind of action with Nike, right? Again, it's like, again, people doing stuff, okay? Someone is asking, play it again? No, there's no point, right? Again, so yeah.

[01:24:43] - [01:24:53]

Akshat Bahety: Okay? Good to go. Understood how to create it, right? Works, super cool. You got the audio, you got everything, like, you know, in one shot, and you did not have to actually, like, you know.

[01:24:53] - [01:25:09]

Akshat Bahety: Think about this, right? MCPs help to do following things. You do not need to learn how to use Higgs field, right? Do you know that? Yes, no? You don't know how to use MC... like, you know, Higgs field. You don't need to know how to use FireCrawl. You don't need to know, like, you know, how the guidelines work. You just gave all of it to Claude.

[01:25:09] - [01:25:16]

Akshat Bahety: And just give it a direction. Now, if you believe, like, you know, again, to improve the video and everything else, go ahead, generate 10 more stuff like, okay?

[01:25:16] - [01:25:19]

Akshat Bahety: Like, you know, go ahead and generate 10 more different videos.

[01:25:19] - [01:25:24]

Akshat Bahety: Okay, and that's completely fine. The idea is that you were able to do all of this in one shot.

[01:25:24] - [01:25:30]

Akshat Bahety: All of this in one shot, in a single chart, without worrying about multiplying different tools.

[01:25:30] - [01:25:40]

Akshat Bahety: That is the outcome. The outcome is not how great the video looks, it's pretty good. Outcome is how all of these things combined were done from a single chart, and you were able to do so much more.

[01:25:41] - [01:25:48]

Akshat Bahety: Okay? Like, doing this would have costed money, time, everything. Right now, you've just spent time and some credits.

[01:25:48] - [01:25:49]

Akshat Bahety: Okay.

[01:25:50] - [01:25:57]

Akshat Bahety: So, that is how we technically... you can use MCPs, and that's the power of MCPs to build these things, okay? So...

[01:25:58] - [01:25:59]

Akshat Bahety: No.

[01:25:59] - [01:26:02]

Akshat Bahety: Do we understand how do MCPs work?

[01:26:02] - [01:26:08]

Akshat Bahety: how different MCPs can work together. Do we understand that how these things work together? Yes?

[01:26:09] - [01:26:10]

Akshat Bahety: Okay.

[01:26:10] - [01:26:12]

Akshat Bahety: Yes? No.

[01:26:14] - [01:26:17]

Akshat Bahety: Right, let me come here... Okay.

[01:26:17] - [01:26:20]

Akshat Bahety: This is a simple example of how MCPs work.

[01:26:21] - [01:26:30]

Akshat Bahety: Okay? And MCP is a single place which can connect to all different kinds of tools. And you can use Connected with Cloud, you can connect with everything, everything can be done in a single place.

[01:26:30] - [01:26:36]

Akshat Bahety: And the idea is that, like, you know, again, anything that you want to connect, you can connect it using an MCP.

[01:26:36] - [01:26:49]

Akshat Bahety: And MCPs are called connectors in here, they are called plugins in ChatGPT. For some reason, none of these companies will create a single word for it, because why do that? Why, when you can make people confused, why make it simple?

[01:26:49] - [01:26:57]

Akshat Bahety: They all have their own different naming conventions. For example, if you open ChatGPT and you want to connect connectors or something like that, like, you want to connect MCPs.

[01:26:57] - [01:27:04]

Akshat Bahety: Some of them are called plugins, some of them are called stuff. Let me just show this to you, okay, so that you guys don't get confused by a convention on names.

[01:27:04] - [01:27:05]

Akshat Bahety: Can you see this, Er?

[01:27:06] - [01:27:13]

Akshat Bahety: plugins, like, a Gmail plugin is called a plugin in ChatGPT, while it is called a connector in Claude. Why?

[01:27:13] - [01:27:16]

Akshat Bahety: Because they can. They can name it whatever they want.

[01:27:17] - [01:27:19]

Akshat Bahety: They... it's not their job to educate you.

[01:27:20] - [01:27:22]

Akshat Bahety: Like, just, that's it.

[01:27:22] - [01:27:33]

Akshat Bahety: So, plugins are called completely different in Cloud, right? They mean completely different things. Here, plugins are technically, like, you know, tools that you will have as connectors, okay? So, again, understand the concept.

[01:27:33] - [01:27:45]

Akshat Bahety: understand the concept, how does the concept work, and which is, like, all of this is just backend MCPs. Like, you see, Higgs field is here, and I can assure you all of this is just, like, at the back-end. It is just skills and, like, you know, an MCP connector.

[01:27:45] - [01:27:46]

Akshat Bahety: Okay.

[01:27:47] - [01:27:48]

Akshat Bahety: Clear.

[01:27:49] - [01:27:51]

Akshat Bahety: Simple enough to understand.

[01:27:52] - [01:27:55]

Akshat Bahety: Plugins equal to MCP equal to connector. Yes.

[01:27:56] - [01:27:59]

Akshat Bahety: Everything is more or less a packaging of something else.

[01:28:00] - [01:28:12]

Akshat Bahety: Marketing has destroyed more products than engineering ever will. That is the reality. One of the greatest examples of this is Salesforce. You know how many times they rebrand their stuff? They rebranded everything again.

[01:28:12] - [01:28:30]

Akshat Bahety: So, don't worry about so much about it. You understand how things work, you understand what you can do with it, and you utilize it. Your job is to become an expert on utilizing things. Your job is to become an expert on building things with it. Your job is not to become an expert on understanding what does this word mean in this tool.

[01:28:31] - [01:28:39]

Akshat Bahety: Okay? Tomorrow, who knows, Gemini is the most popular tool. I hope, one day, right? And they call it completely else, right? So...

[01:28:39] - [01:28:40]

Akshat Bahety: Okay.

[01:28:40] - [01:28:49]

Akshat Bahety: So, this is what the goal of MCP is. You can connect to our emails, you can connect to your calendars, you can connect to your notes, you can connect quite literally anything that you want, because most of the tools in the world

[01:28:50] - [01:29:06]

Akshat Bahety: are right now focused on, like, you know, building MCPs, because the next generation of users is not going to be humans only. It's going to be also AI agents. So, MCPs can be a very good tool, because they are all text-based, right? We used Higgs field to create the video.

[01:29:06] - [01:29:23]

Akshat Bahety: Right? But everything is being, like, you know, again, everything is being sent via directly using text, and that is why AI agents also like using MCPs. So whenever you get to a level, and I'm pretty sure, like, you know, I don't want to spoil the fun for the next days, whatever is going to come, and there's quite some cool stuff.

[01:29:23] - [01:29:27]

Akshat Bahety: you will see that AI agents also are able to use MCPs.

[01:29:27] - [01:29:33]

Akshat Bahety: Okay? And MCPs is probably, like, you know, one of the most coolest things to, like, you know, use for connecting every kind of an app.

[01:29:34] - [01:29:45]

Akshat Bahety: even now, new products that are coming in, in, like, anything, like, you know, old company, new company, a startup, whatever, the reality is, they all are building an MCP from day one.

[01:29:46] - [01:29:50]

Akshat Bahety: Because I can tell you, once you get addicted to using MCPs, you can't go back.

[01:29:51] - [01:29:57]

Akshat Bahety: Right now, my purchase decisions are the software that I want to subscribe, if they don't have an MCP, I don't buy that software.

[01:29:58] - [01:29:59]

Akshat Bahety: Okay.

[01:29:59] - [01:30:11]

Akshat Bahety: So, just remember that, right? Again, it's like, because I want every tool to work in Cloud, or a ChatGPT. I don't want to switch between 7 different UIs. It's not my job to learn UIs. That is an AI's job now.

[01:30:11] - [01:30:26]

Akshat Bahety: So, if someone wants to convince me to use a tool, they need to convince me to use their MCPs. They need to know that there is so much good quality stuff that I just use that. I don't want a 10-page, beautiful-looking UI. I want a good tool which does the job.

[01:30:26] - [01:30:27]

Akshat Bahety: Okay.

[01:30:27] - [01:30:29]

Akshat Bahety: Make sense?

[01:30:30] - [01:30:35]

Akshat Bahety: And, like, again, a lot of people are asking about financial MCPs and everything else.

[01:30:35] - [01:30:41]

Akshat Bahety: they exist. There are enough companies in the world who are offering that, so Robinhood has an MCP,

[01:30:41] - [01:31:01]

Akshat Bahety: In, like, you know, US, it's probably one of the biggest companies in, like, you know, US for trading, so you can use AI agents to trade. I would not suggest that, but if you want to, you can. Go ahead, knock yourself out, and you have Zerodha in India, which has an MCP, right, again, and you can obviously connect that.

[01:31:01] - [01:31:02]

Akshat Bahety: Okay? So...

[01:31:03] - [01:31:19]

Akshat Bahety: They exist for trading. Should you use it, please take your own calls. I will... this is not an advice, this is just that MCP exists for financial stuff also. You can ask your AI to trade with it, you can ask AI to do anything, and they're doing a pretty good job at it, from what I understand.

[01:31:20] - [01:31:21]

Akshat Bahety: Okay.

[01:31:24] - [01:31:37]

Akshat Bahety: Good! Now, I know you guys have been asking for a break, so we're going to take a short break for, like, around 7 minutes, okay? I'm going to play some music on my end. Once the music stops, everyone is back, okay? So roughly around 7 minutes. Good.

[01:31:41] - [01:31:42]

Akshat Bahety: Yes? No.

[01:31:42] - [01:31:43]

Akshat Bahety: Good to go.

[01:31:43] - [01:31:44]

Akshat Bahety: Okay.

[01:31:56] - [01:31:59]

Akshat Bahety: Sound like Squid Games? No, it's not Squid Games, don't worry.

[01:32:22] - [01:41:15]

Audio shared by Akshat Bahety: [Break music played; lyrics not transcribed.]

[01:41:25] - [01:41:27]

Akshat Bahety: Perfect, and we are back.

[01:41:29] - [01:41:33]

Akshat Bahety: Yes, yes, I'll be back. Yes, everyone?

[01:41:36] - [01:41:38]

Akshat Bahety: Yeah, that's perfect, perfect, perfect.

[01:41:38] - [01:41:42]

Akshat Bahety: Awesome. Good songs, yes, thanks a lot for the comments, yes, that's only...

[01:41:43] - [01:41:51]

Akshat Bahety: A lot of it is... a lot of it is YouTube music, learning from interest, and that's where, like, you know, again, I think, just so, like, you know, all of you think about it.

[01:41:51] - [01:42:00]

Akshat Bahety: It is one of the first ways of, like, you know, of, like, what you might call machine learning used for, like, you know, getting you the right kind of music and stuff like that, so, yeah.

[01:42:00] - [01:42:01]

Akshat Bahety: It works out.

[01:42:05] - [01:42:05]

Akshat Bahety: Cool.

[01:42:07] - [01:42:20]

Akshat Bahety: Perfect. Let's get started. I'm going to give it, like, 30 seconds, and we come to it. Now, I want to show you a couple of more use cases, right, again, and also, what might be possible, like, again, with tools that are other than, like, you know, just

[01:42:20] - [01:42:32]

Akshat Bahety: like, you know, image or image generation and stuff like that. And let me just cover that, and then we'll go into and actually build our own MCP server, right? And connect, okay? So we're going to do that.

[01:42:33] - [01:42:36]

Akshat Bahety: Aside from, like, you know, again.

[01:42:37] - [01:42:48]

Akshat Bahety: ChatGPT, or are there MCPs for people who prefer using local models? Good questions. I'll answer some of your questions towards the end, right, again. Let's continue with, like, you know, again, what we have, and then we'll go from there, okay?

[01:42:49] - [01:42:50]

Akshat Bahety: Good.

[01:42:50] - [01:43:06]

Akshat Bahety: Perfect. Let's come and get started. Now, I'm going to show you an example of, like, you know, again, connecting, you can say, like, an MCP, which is also, like, you know, still a plugin, right, that is available in ChatGPT, and how we can use it. Let me share my screen, okay, so...

[01:43:07] - [01:43:09]

Akshat Bahety: Well, meet women.

[01:43:09] - [01:43:12]

Akshat Bahety: Shared ChatGPT, yes, perfect, thanks.

[01:43:12] - [01:43:15]

Akshat Bahety: So, in Chard GPT, right again, think about it.

[01:43:15] - [01:43:22]

Akshat Bahety: We have quite a bit of plugins, right? How many of you know about a tool called Figma? How many of you know about a tool called Figma?

[01:43:23] - [01:43:25]

Akshat Bahety: Have you heard about it? Have you heard about, like, you know.

[01:43:26] - [01:43:31]

Akshat Bahety: If not, it's fine. Like, you know, I'm just... I'm going to show you what Figma is, like, you know, again, as a tool, so...

[01:43:33] - [01:43:35]

Akshat Bahety: Alright, let me share this.

[01:43:36] - [01:43:48]

Akshat Bahety: So, Figma is like a design tool, right? It's a design tool, right, where technically, if you're not a designer, like, or if you're not an engineer, or if you don't work in product, you are not going to be using this, like, that's the reality, no matter what. Now.

[01:43:49] - [01:43:53]

Akshat Bahety: as amazing, or beautiful, or whatever, however it sounds, I don't know, right? Again?

[01:43:53] - [01:43:59]

Akshat Bahety: Using Figma, right, used to be a skill. Like, again, it's still a skill, like, just to be clear, right?

[01:43:59] - [01:44:09]

Akshat Bahety: A dying skill nonetheless, but it is a skill, right? Again, Figma used to be created before creating prototypes and apps. You can see, like, you know, there is a massive, amazing video going on.

[01:44:09] - [01:44:20]

Akshat Bahety: And still, a lot of companies use it, right? Again, like, there's a massive companies that use Figma to actually build designs. The reason for using Figma is just that's the product cycle, right? But what we can use Figma for

[01:44:21] - [01:44:33]

Akshat Bahety: If you want to create, like, you know, videos for yourself, or if you want to use, like, you know, you can create images using this, we're going to use Figma to actually create, like, you can say, a UI dashboard, and also we can use Figma to create social media content.

[01:44:33] - [01:44:44]

Akshat Bahety: This is just another way of I'm showing, like, you know, again, a lot of you said, Akshat, like, you know, it's obviously going to, like, you know, Higgs field costs some money and everything else. We're just going to show you how you can use Figma also to create, like, you know.

[01:44:44] - [01:44:47]

Akshat Bahety: content, like, you know, Instagram-style content, okay?

[01:44:47] - [01:45:00]

Akshat Bahety: Shall we do that, right? And it's a design tool, but you can design anything, okay? So let me switch there, and we're going to use InChartGPT to connect it. Now, the best part is Figma already exists as a plugin, right? Again.

[01:45:01] - [01:45:03]

Akshat Bahety: What does plugin mean in ChartGPT?

[01:45:03] - [01:45:07]

Akshat Bahety: Right. Is plugin equal to MCP? Yes. Can we agree?

[01:45:07] - [01:45:09]

Akshat Bahety: Right? Plugin in the chart.

[01:45:10] - [01:45:12]

Akshat Bahety: Yes, yes, yes, Cleo, good.

[01:45:12] - [01:45:20]

Akshat Bahety: So, I already connected Figma, and we already have Figma connected, and you can see, like, you know, again, it has, like, you know, a couple of cool things that are coming together.

[01:45:20] - [01:45:28]

Akshat Bahety: Now, the only thing that, like, you know, you get in ChatGPT with plugins is also you get a lot of skills that are there, okay? So...

[01:45:28] - [01:45:41]

Akshat Bahety: There are a lot of skills that are there, that are also coming with Figma, okay? So, let's go ahead and try this. Let's go ahead and try it. Now, I'm going to give it a simple prompt, right? To create, I don't know, like.

[01:45:41] - [01:45:44]

Akshat Bahety: I want you to create Okay.

[01:45:45] - [01:45:55]

Akshat Bahety: I want you to create an Instagram carousel with 4 different slides explaining how does photosynthesis work in an animated way or easy way.

[01:45:56] - [01:46:03]

Akshat Bahety: Okay, I will zoom in, guys, don't worry. Just give me one second. Yeah. One sec. Got it. I have, like, when I was on full screen. Should be better now.

[01:46:04] - [01:46:13]

Akshat Bahety: Okay, this is going to be my option, and I've selected Figma already. If you don't want to even, like, select Figma, you can just simply say, use Figma to create this.

[01:46:15] - [01:46:16]

Akshat Bahety: Okay.

[01:46:17] - [01:46:27]

Akshat Bahety: And, like, you know, again, it will go ahead and select. If you want to select Figma, you can also... if you ever want to select something directly as a plugin, you can write Figma and select it, okay? That's it. Nothing more.

[01:46:28] - [01:46:36]

Akshat Bahety: Okay, so it's going to go ahead and create it, and it will create everything in the Figma file on our Figma account, automatically.

[01:46:36] - [01:46:54]

Akshat Bahety: Now, the best part is Figma has quite a good free plan, right? They have kept, like, you know, working around it, but the one thing is that with Figma, you're not actually, like, you know, it's not actually going to cost you credits on Figma side. It's only going to cost you, like, you know, again, credits on ChatGPT and stuff like that. So that is one good way of using it.

[01:46:55] - [01:47:06]

Akshat Bahety: you do not need a subscription Figma. To a certain extent, the free plan is quite good. I have not used Figma for a lot of work in quite some time, but till the time I was using it, free plan was quite good.

[01:47:06] - [01:47:12]

Akshat Bahety: We are in ChatGPT. We are just in ChatGPT, and we are not... we are just in chat. We are in work mode in ChatGPT.

[01:47:12] - [01:47:13]

Akshat Bahety: Okay.

[01:47:14] - [01:47:18]

Akshat Bahety: So it's going to keep creating this, right, again, and I'm going to see if, like, you know, again, we can get to a file.

[01:47:19] - [01:47:22]

Akshat Bahety: And I want to show you how this gets created automatically.

[01:47:23] - [01:47:28]

Akshat Bahety: Okay. Now, Figma also shipped its own AI features, right, again, and bring it from there.

[01:47:28] - [01:47:33]

Akshat Bahety: And they also try to replicate this, but the ship has already sailed, people want to just use...

[01:47:34] - [01:47:50]

Akshat Bahety: ChatGPT and AI to do all of this stuff. It still has its own use case, but it's a good use case if you want to create, I don't know, like, you know, content around, like, you know, like, whatever you want to create as carousels and stuff like that, you can export it as images and post it directly on LinkedIn, Twitter, wherever you want it.

[01:47:51] - [01:47:52]

Akshat Bahety: Okay.

[01:47:54] - [01:48:01]

Akshat Bahety: Whatever I'm doing here, can you do the same in Claude? Yes, you can. Completely you can. Okay? I'm just showing you an example, I'm just showing you both the tools, because

[01:48:02] - [01:48:13]

Akshat Bahety: Remember, guys, like, the tools are going to keep changing. Like, just remember that, okay? The tools are going to keep changing, no matter what. Your job is to not choose the tool, your job is to choose the task, and also choose the outcome.

[01:48:13] - [01:48:16]

Akshat Bahety: Whichever tool gives you the right outcome, use it.

[01:48:16] - [01:48:29]

Akshat Bahety: No, is... if anyone is paying you, if anyone is paying you, like, you know, again, like, if any one of these companies is paying you to use their tool, go ahead and use it. Like, if Claude is paying you, like, you know, I don't know, giving you free subscription also for a year, just use Claude.

[01:48:29] - [01:48:32]

Akshat Bahety: Until that is the case, use all the tools.

[01:48:32] - [01:48:36]

Akshat Bahety: Use every tool that you have, and go for it.

[01:48:39] - [01:48:46]

Akshat Bahety: Do you have to specify? Yes and no, right? Again, so sometimes you need to specify, sometimes not. Most of the times, AI can pick it up automatically.

[01:48:49] - [01:48:50]

Akshat Bahety: Okay.

[01:48:51] - [01:49:00]

Akshat Bahety: let's see, it's going to take some time, it's like, again, the only thing with, like, you know, again, AI right now is speed, right? And I think that is going to get solved quite quickly. I am seeing, like, you know.

[01:49:00] - [01:49:03]

Akshat Bahety: Quite some amazing launches, so... yeah.

[01:49:09] - [01:49:18]

Akshat Bahety: Can you use social media channels as connectors? Not right now, they don't have anything good right now. There is no LinkedIn connector stuff, like, as much as I remember. It's very basic stuff you can do.

[01:49:19] - [01:49:24]

Akshat Bahety: If you, like, if you give access to AI via connectors, the social media will stop becoming,

[01:49:25] - [01:49:42]

Akshat Bahety: it will all be slop, it will all be AI slop, that's why they're not creating those connectors. They're still... you can jump through hoops, like, you can use browser automation like we did, right, automatically, to do ChatGPT, and it was able to reply. But if you think about it, if you were able to, like, you know, say that I want to post 100 times on Claude, 100 days on Claude.

[01:49:43] - [01:49:50]

Akshat Bahety: Right? And, using Claude, you want... you can post 100 posts, you can post 200 posts, right? So, yeah.

[01:49:51] - [01:50:08]

Akshat Bahety: Okay, let me just, like, you know, again, let me just come to Figma, and I'm showing... I'm just going to show you what's happening here, okay? Let me bring you to Figma. So this is the Figma screen. I'm just... you might not be able to see the screen, like, you know,

zoomed out, but, like, again, yeah, now it would be better. You can see, this is all happening itself.

[01:50:08] - [01:50:16]

Akshat Bahety: ChatGPT is automatically doing everything. It created this file, it is building everything, and it will slowly and steadily keep updating this one after the other.

[01:50:16] - [01:50:29]

Akshat Bahety: Okay. So, you can see, like, you know, again, it is technically just controlling the product, it is controlling Figma automatically, right? Again, and go from there. See? It created that, you can see plants cope with sunlight. Does that look like a good design?

[01:50:29] - [01:50:31]

Akshat Bahety: Quite a good design.

[01:50:36] - [01:50:37]

Akshat Bahety: Yes?

[01:50:38] - [01:50:42]

Akshat Bahety: Like, something like this would take you to create in Canva also, like, you know, at least

[01:50:43] - [01:50:46]

Akshat Bahety: 20 minutes, 20 to 30 minutes to perfect, to get the design and everything else.

[01:50:47] - [01:50:59]

Akshat Bahety: The ChatGPT is imposing the image on Figma, don't worry, it's not actually creating an image, it is designing the image. When I... like, if you understand how Figma works, so all of this is editable, and I'll show that to you once it is done, okay? I don't want to disturb right now.

[01:51:01] - [01:51:06]

Akshat Bahety: And it will keep creating one after the other, right? Again, like, you know, it will keep creating the image one after the other.

[01:51:09] - [01:51:25]

Akshat Bahety: Okay, so this is just a very good use case to understand that, you know, just by connecting MCPs, right, you can do so many different things, okay? You can use... do so many

different things, which would have required, like, you know, again, just a certain amount of skill set to do this before this, right? Like, really.

[01:51:26] - [01:51:26]

Akshat Bahety: Okay.

[01:51:27] - [01:51:32]

Akshat Bahety: Do they create a unique image? Yeah, like, you can ask it to create a unique image. What is unique? Like, define unique.

[01:51:32] - [01:51:36]

Akshat Bahety: There is nothing unique. Everything is a combination of ideas that you've learned through your life.

[01:51:37] - [01:51:40]

Akshat Bahety: People want to make it unique stuff, but yeah.

[01:51:41] - [01:51:43]

Akshat Bahety: Okay? So you can see.

[01:51:43] - [01:51:45]

Akshat Bahety: It's going to complete this.

[01:51:46] - [01:51:57]

Akshat Bahety: Would it use Canva the same way? You can, yes, technically. It's just, like, again, in Canva, one thing that I feel is, like, editing sometimes is a bit difficult, because it doesn't adhere to design principles a lot of times. But you can use it.

[01:52:10] - [01:52:18]

Akshat Bahety: Okay, so you have got these images, you understood how to use this, right? It will automatically, like, you know, gonna create all the images one after the other? Yes, you have the four images.

[01:52:18] - [01:52:20]

Akshat Bahety: Clear, simple enough to understand?

[01:52:21] - [01:52:22]

Akshat Bahety: Yes?

[01:52:22] - [01:52:33]

Akshat Bahety: It created all of this, and, like, let's say now you don't like something, right? The best thing about Figma, and also, like, again, everything else, is that the editing part is pretty, like, you know, available, so you can change it, okay?

[01:52:33] - [01:52:40]

Akshat Bahety: Akshat created this, right? I can write it whatever I want, right? I can say, Yeah, I created this.

[01:52:41] - [01:52:42]

Akshat Bahety: Have fun.

[01:52:42] - [01:52:43]

Akshat Bahety: Okay.

[01:52:44] - [01:53:02]

Akshat Bahety: So, again, editing is much better in Figma, and you can use it to, like, you know, create. Again, and the best part, it's all done automatically. You don't need to... and you did not spend tokens on creating these images. You spent ChatGPT tokens, but you did not have to spend another extra amount on Higgs field or something like that. So, again, different goals, different tools, right? But it works.

[01:53:03] - [01:53:03]

Akshat Bahety: Okay.

[01:53:04] - [01:53:10]

Akshat Bahety: Clear, understood how you can use different tools, multiple different tools, to actually connect, right, again.

[01:53:10] - [01:53:15]

Akshat Bahety: Okay, and that's all you need, like, you know, technically from a perspective of connecting these things.

[01:53:15] - [01:53:20]

Akshat Bahety: So, remember this slide, right? Remember that you can connect anything.

[01:53:20] - [01:53:28]

Akshat Bahety: You can connect anything, right, with MCPs, you can connect your inbox, your emails, everything, you can connect any tool.

[01:53:28] - [01:53:41]

Akshat Bahety: Even Salesforce is available to connect. If you're working in companies, you might have heard of SAP, Oracle, and like, you know, again, you would have heard of Salesforce. All of these tools can also be connected with MCPs. That is how powerful MCPs are.

[01:53:42] - [01:53:44]

Akshat Bahety: Okay, just to give you an idea, this is...

[01:53:44] - [01:53:53]

Akshat Bahety: like, a massive announcement about Claude working with Salesforce, okay? Because MCPs are so important. Like, everyone is, like, you know, wants to...

[01:53:54] - [01:54:04]

Akshat Bahety: the living, breathing practice of how AI works. I can assure you that, right? Again, I can assure you that MCPs... like, the... what happened with the...

[01:54:04] - [01:54:05]

Akshat Bahety: You know...

[01:54:06] - [01:54:13]

Akshat Bahety: when we moved from web to mobile, there was a massive explosion in people using tech. Like, so many more people started using software, right?

[01:54:13] - [01:54:21]

Akshat Bahety: And the reality is just that, right? With MCPs, once you have your tools in the chat, you will use AI so much more.

[01:54:21] - [01:54:25]

Akshat Bahety: Because you don't have to, like, you know, switch between 20 different windows.

[01:54:25] - [01:54:32]

Akshat Bahety: Anyone who, like, again, how many of you, like, again? Like, you know, I'll get to click on 20 buttons today.

[01:54:32] - [01:54:39]

Akshat Bahety: Anyone is excited about that? Like, don't you, like, you know, you people learn shortcuts so that, you know, they can do their job faster? Yes, would you agree?

[01:54:40] - [01:54:41]

Akshat Bahety: Yes?

[01:54:41] - [01:54:48]

Akshat Bahety: Now, think about it, like, is there anyone in the world who would be like, you know, I get to click on 100 buttons today? Nobody, like, nobody wishes that, nobody even counts it, right?

[01:54:48] - [01:55:02]

Akshat Bahety: people who use the software a lot, they learn shortcuts so that they don't have to spend time, right? So the idea is, like, you know, again, the goal is that one single screen, right? One single screen, one thing that becomes your partner to do everything.

[01:55:03] - [01:55:08]

Akshat Bahety: And AI will be that. The only way to get to do this is that part.

[01:55:08] - [01:55:18]

Akshat Bahety: Okay? Yo, like, for example, like, even these images, right? They're super cool. I don't need to create these images by hand, they're done, I have a whole thing that can be set up, okay?

[01:55:18] - [01:55:23]

Akshat Bahety: Perfect. With that, let's go and build our own MCP. How many of you want to build your own...

[01:55:29] - [01:55:39]

Akshat Bahety: Yes, perfect. Now, we're going to come back to our old friend, Anaden. We're going to build out in MCP in Anaden.

[01:55:39] - [01:55:41]

Akshat Bahety: I don't have, like, again.

[01:55:41] - [01:55:46]

Akshat Bahety: I'm going to go ahead and build it here. And again, just remember one thing, okay?

[01:55:47] - [01:55:50]

Akshat Bahety: I'm going to build an MCP as an example.

[01:55:50] - [01:55:57]

Akshat Bahety: Okay? Just to be very, very clear, I'm going to build an MCP as an example. You can build whatever you want.

[01:55:57] - [01:56:01]

Akshat Bahety: For today, we're going to do a very simple task, okay? We're going to build an MCP.

[01:56:01] - [01:56:03]

Akshat Bahety: We're going to build a MCP.

[01:56:03] - [01:56:05]

Akshat Bahety: and connect it.

[01:56:05] - [01:56:08]

Akshat Bahety: And we're going to connect it to perplexity.

[01:56:10] - [01:56:11]

Akshat Bahety: Okay.

[01:56:12] - [01:56:17]

Akshat Bahety: Perplexity. We're going to build an MCP that allows us to connect to perplexity.

[01:56:18] - [01:56:18]

Akshat Bahety: Okay.

[01:56:19] - [01:56:35]

Akshat Bahety: Yeah, yeah, for right now, please don't try to build along, just listen to the instructions, just, like, you know, again, just work with me, right? Like, when I say work with me, just watch me work and get this done. And then later, you can obviously, like, you know, again, you will try this in your breakout rooms, don't worry, okay?

[01:56:35] - [01:56:39]

Akshat Bahety: So for now, just please, like, you know, just see what I'm going to do.

[01:56:40] - [01:56:53]

Akshat Bahety: Okay? The reason I'm creating an MCP and connect to perplexity is an example, okay? It is an example. Please keep that in mind, right? Don't ask me why are we doing this, why are we connecting to perplexity? As an example, to showcase what is possible.

[01:56:53] - [01:56:58]

Akshat Bahety: Okay? Would you agree that perplexity is still one of the best tools to do research?

[01:56:59] - [01:57:01]

Akshat Bahety: Perplexity can do very good research.

[01:57:05] - [01:57:06]

Akshat Bahety: NAG.

[01:57:06] - [01:57:13]

Akshat Bahety: Do you believe that web research is going to be an important tool to have when you're using Claude and ChatGPT? Yes.

[01:57:14] - [01:57:17]

Akshat Bahety: Right? Would you want to use the best tool to do web research, right?

[01:57:19] - [01:57:25]

Akshat Bahety: I... what is happening to my spellings today. So yeah, perplexity is very good at research, and we're going to use it

[01:57:25] - [01:57:41]

Akshat Bahety: And we're going to create an MCP that allows us to do very good web research, okay? That is the goal, as simple as that. Nothing... nothing difficult, nothing simple, just a good example of doing web research. Okay? So we're going to use this, and we're going to see how it plays out. Now.

[01:57:41] - [01:57:45]

Akshat Bahety: How many of you think... how many of you think it will be difficult to build an MCP server? How many of you think it will take time?

[01:57:46] - [01:57:50]

Akshat Bahety: Give me, like, you know, again, how many of you think on a scale of 1 to 10, how difficult it would be?

[01:57:56] - [01:58:01]

Akshat Bahety: 1, 2, 3, 6, 7, 10, all numbers across the board, okay?

[01:58:02] - [01:58:04]

Akshat Bahety: I can tell you it's going to be, like.

[01:58:04] - [01:58:13]

Akshat Bahety: I don't know, like, again, let's see. I would rate it on, like, a scale of 5. Let's try to get to that, okay? So, we'll have some fun.

[01:58:14] - [01:58:14]

Akshat Bahety: So...

[01:58:16] - [01:58:24]

Akshat Bahety: We'll have some fun. Everything is, someone has written child's play. Everything is a child's play, if you have the curiosity to learn. Okay?

[01:58:24] - [01:58:31]

Akshat Bahety: So, let's go ahead. We're going to build... it's going to be super simple. We're going to come to Ann, right? We're going to come here and click on and search for...

[01:58:32] - [01:58:33]

Akshat Bahety: MCP

[01:58:33] - [01:58:43]

Akshat Bahety: Right? That's it. Imagine, that is how simple it is. We just need to go to MCP. Okay? And we are here, we get this, and I'm going to close it for now.

[01:58:43] - [01:58:58]

Akshat Bahety: So what we have added right now is a server trigger. This is our trigger, this is our MCP server trigger, that is going to technically... I've zoomed in... more than this, if I zoom in, I can't myself see it. Okay, so I think this is, like, good enough.

[01:58:59] - [01:59:07]

Akshat Bahety: So, we'll start. You just need to search for MCP Server Trigger, which is going to be your entry point, which is going to be the entry point for your MCP.

[01:59:08] - [01:59:20]

Akshat Bahety: Okay? We're just going to keep it as it is. I'm going to close this. This is our MCP server trigger. This is going to be used, and we're going to use it. Now, if you think about it, every MCP has tools. Every MCP has tools.

[01:59:20] - [01:59:33]

Akshat Bahety: Okay? And just to show you an example of what do I mean by these tools, if you look at any MCP, right, again, and if I bring you to even, like, ChatGPT's plugins, every MCP has a list of tools.

[01:59:34] - [01:59:42]

Akshat Bahety: Okay? Every MCP has a list of tools. And that is all that there is, right? Every MCP is a list of tools that are utilized.

[01:59:42] - [01:59:46]

Akshat Bahety: And I'm going to just show that so you guys can see, like, you know, again, how these different tools work.

[01:59:48] - [01:59:49]

Akshat Bahety: Let me come head...

[01:59:53] - [01:59:59]

Akshat Bahety: I'm going to share my screen, switch to Claude, so you guys can see. So, every MCP is just a list of tools.

[02:00:00] - [02:00:00]

Akshat Bahety: Okay.

[02:00:01] - [02:00:06]

Akshat Bahety: Every MCP is just a list of tools, and you can see that, right? There are these tools that are available.

[02:00:06] - [02:00:07]

Akshat Bahety: Does that make sense?

[02:00:07] - [02:00:12]

Akshat Bahety: clear, write tools in the chat. Every MCP has a list of tools that we can use.

[02:00:16] - [02:00:18]

Akshat Bahety: Perfect. Amazing.

[02:00:18] - [02:00:19]

Akshat Bahety: Okay.

[02:00:19] - [02:00:35]

Akshat Bahety: Now, we're going to come back here, and in this, we obviously want to add perplexity as a tool, okay? We want to add perplexity as a tool. So, we have our MCP server, right? And then we want to add perplexity as a tool.

[02:00:36] - [02:00:37]

Akshat Bahety: Okay.

[02:00:42] - [02:00:57]

Akshat Bahety: Okay, we're going to connect Perplexity as a tool. Now, let's come here, we're going to come here, click on add, and now, to add perplexity as a tool, I need to use a command called curl command. Curl command is a way to connect APIs.

[02:00:58] - [02:01:03]

Akshat Bahety: Do you remember that APIs, MCPs are just like a... Wrapper on top of API.

[02:01:04] - [02:01:06]

Akshat Bahety: Do you remember? We just talked about it, like, an hour ago.

[02:01:07] - [02:01:07]

Akshat Bahety: Yes?

[02:01:08] - [02:01:13]

Akshat Bahety: Yes, write API... like, write MCP in the chat if you understand that wrapper. Write MCP in the chat.

[02:01:13] - [02:01:16]

Akshat Bahety: I want you all, like, this is going to be super simple. It's going to take, like.

[02:01:18] - [02:01:21]

Akshat Bahety: every MCP, right again, on the backend.

[02:01:21] - [02:01:25]

Akshat Bahety: has tools, right? So everything has a tool, and all these tools are

[02:01:26] - [02:01:33]

Akshat Bahety: all these tools are, honestly, are just APIs, okay? So if you think about it, like, this is a wrapper.

[02:01:33] - [02:01:42]

Akshat Bahety: This is the biggest wrapper, right? Within that wrapper, there are tools, and within that tools, there is an API wrapper. I can make different colors so you guys can understand this better.

[02:01:43] - [02:01:47]

Akshat Bahety: Okay? And your AI just needs to know about this. That's it.

[02:01:47] - [02:01:48]

Akshat Bahety: Okay.

[02:01:49] - [02:01:51]

Akshat Bahety: Simple enough to understand now? Yes.

[02:01:53] - [02:01:53]

Akshat Bahety: Okay.

[02:01:54] - [02:02:04]

Akshat Bahety: Right? Clear? So, this is what we are going to do. We are going to use a perplexity API. We are going to use a Perplexity API.

[02:02:05] - [02:02:06]

Akshat Bahety: as a tool.

[02:02:06] - [02:02:10]

Akshat Bahety: Okay, we're going to use the Perplexity API as a tool.

[02:02:10] - [02:02:15]

Akshat Bahety: So... All you need to search for is search for Perplexity API.

[02:02:16] - [02:02:18]

Akshat Bahety: And we go to the API platform.

[02:02:19] - [02:02:23]

Akshat Bahety: I just want the documentation, if they can give me that.

[02:02:24] - [02:02:25]

Akshat Bahety: Give me one second.

[02:02:27] - [02:02:28]

Akshat Bahety: No.

[02:02:28] - [02:02:37]

Akshat Bahety: So, this is where we have different tools, and you can see it already shows an API that we actually want to use. For now, I'm just going to use

[02:02:37] - [02:02:48]

Akshat Bahety: Hani there, search the web API. And you can see it already here, but even if you want to go ahead, you can click on Quick Start on Search API. We're just going to give our MCP right now the access to search the web.

[02:02:48] - [02:02:49]

Akshat Bahety: Okay.

[02:02:49] - [02:02:53]

Akshat Bahety: Simple enough to understand that. Are we clear what we are doing?

[02:02:53] - [02:02:58]

Akshat Bahety: Tell me, do we understand the tool that we're giving? We're going to give Perplexity Search as an API?

[02:02:59] - [02:03:01]

Akshat Bahety: Write search in the chat.

[02:03:01] - [02:03:09]

Akshat Bahety: We're going to create perplexity, You're going to give perplexity Search API, Do... As a tool.

[02:03:10] - [02:03:20]

Akshat Bahety: I'm going to create a tool, I'm going to create a tool in NH10, I'm going to add a tool to this MCP, and what we're going to add to that is just going to be an API. The tool is going to be an API.

[02:03:21] - [02:03:21]

Akshat Bahety: Okay.

[02:03:22] - [02:03:25]

Akshat Bahety: The tool is going to be an API.

[02:03:25] - [02:03:26]

Akshat Bahety: MCPs, yes.

[02:03:27] - [02:03:28]

Akshat Bahety: Okay, Theo?

[02:03:30] - [02:03:31]

Akshat Bahety: good enough.

[02:03:33] - [02:03:36]

Akshat Bahety: Good to go. GDG in the chat from everyone.

[02:03:36] - [02:03:42]

Akshat Bahety: It's going to be simple. We have not got the API till now. I'll get the API, don't worry. But this is what we're going to do, okay?

[02:03:43] - [02:03:43]

Akshat Bahety: No.

[02:03:44] - [02:03:52]

Akshat Bahety: You can just search on Google for Perplexity API. That's it. Perplexity API docs, okay?

[02:03:52] - [02:03:54]

Akshat Bahety: And you'll get this.

[02:03:54] - [02:03:59]

Akshat Bahety: APIs, that's it. Here are all the APIs that the Perplexity as a company has listed, okay?

[02:04:02] - [02:04:06]

Akshat Bahety: Here are all the APIs that Perplexity, as a company, has listed. I'm just going to go...

[02:04:07] - [02:04:11]

Akshat Bahety: And look at. I want the search API, I just want the search API.

[02:04:12] - [02:04:15]

Akshat Bahety: And in the search API, we have...

[02:04:15] - [02:04:18]

Akshat Bahety: Like, you know, again, this command.

[02:04:18] - [02:04:26]

Akshat Bahety: Okay, we're going to use this command. We're going to use this curl command. I'm going to zoom in, we're going to use this curl command to connect with our MCP.

[02:04:28] - [02:04:28]

Akshat Bahety: Okay.

[02:04:32] - [02:04:33]

Akshat Bahety: Clear?

[02:04:34] - [02:04:42]

Akshat Bahety: Now, what is a curl command and everything else? I'll explain you, but this is what we're going to use. You don't need to know what is this curl command, we are going to show you how this works, okay?

[02:04:43] - [02:04:51]

Akshat Bahety: So I'm going to copy this, I'm going to copy this, and now I'm going to search for a very simple tool called HTTP.

[02:04:51] - [02:04:52]

Akshat Bahety: HTTP.

[02:04:53] - [02:05:01]

Akshat Bahety: curl command is a way, like, you know, again, this is the oldest way, and today also, all the organizational APIs work by connecting via HTTP.

[02:05:02] - [02:05:11]

Akshat Bahety: Okay? HTTP is how your website loads, HTTP is how everything works, so HTTP is a tool that allows us to use curl commands.

[02:05:12] - [02:05:17]

Akshat Bahety: Right? We are going to use HTTP request tool to use curl commands.

[02:05:19] - [02:05:21]

Akshat Bahety: Okay? Simple enough.

[02:05:22] - [02:05:29]

Akshat Bahety: does this feel? Like, again, very simply, HTTP, if you all remember, like, in, like, you know, you would have learned about this in school, right?

[02:05:30] - [02:05:37]

Akshat Bahety: It's called HyperText Protocol, Transfer Protocol. It's just how web works. It's just how internet works, okay? So we are just going to use that.

[02:05:38] - [02:05:49]

Akshat Bahety: So I've copied this curl command, I'm going to come to N10, I'm going to come to N10, and you can see there is an option here to import curl. There is an option here to import curl.

[02:05:49] - [02:05:50]

Akshat Bahety: Okay?

[02:05:51] - [02:05:56]

Akshat Bahety: I'm just going to paste the curl command, as I got it, and click on import.

[02:05:56] - [02:05:58]

Akshat Bahety: I'm going to click on import.

[02:06:01] - [02:06:07]

Akshat Bahety: It takes a couple of seconds, and this command is now imported here for me to use.

[02:06:09] - [02:06:14]

Akshat Bahety: Does this step make sense? We just came here, clicked on import call, and pasted our call command.

[02:06:14] - [02:06:15]

Akshat Bahety: Cleo.

[02:06:15] - [02:06:20]

Akshat Bahety: Write curl in the chat, if you got it. Write curl in the chart. It's C-U-R-L.

[02:06:23] - [02:06:24]

Akshat Bahety: Perfect.

[02:06:32] - [02:06:46]

Akshat Bahety: The reason we are importing the command is because... do you want to understand every method? No. Do you want to, like, you know, again, go through every parameter? No. You just want to get the curl command, which is available on perplexity documentation.

[02:06:46] - [02:06:49]

Akshat Bahety: And I can actually show this to you in a better way.

[02:06:50] - [02:06:54]

Akshat Bahety: Okay? Give me one second, okay? Just don't tell me to zoom in and everything else, just give me one second.

[02:06:55] - [02:06:56]

Akshat Bahety: You can see this?

[02:06:56] - [02:07:02]

Akshat Bahety: We got this curl command from Perplexity documentation, okay? From Perplexity documentation.

[02:07:03] - [02:07:05]

Akshat Bahety: We got it from here, we copied it.

[02:07:06] - [02:07:09]

Akshat Bahety: Right? And we pasted the import call command here.

[02:07:10] - [02:07:15]

Akshat Bahety: And that is how we got the information in this place. Clear?

[02:07:17] - [02:07:18]

Akshat Bahety: Does that make sense?

[02:07:20] - [02:07:23]

Akshat Bahety: Simple now. Everyone has got it.

[02:07:23] - [02:07:24]

Akshat Bahety: Yes? Okay.

[02:07:27] - [02:07:28]

Akshat Bahety: Perfect. Good.

[02:07:30] - [02:07:31]

Akshat Bahety: No.

[02:07:40] - [02:07:44]

Akshat Bahety: Okay? Now, all I need to add is, I need to add an API key.

[02:07:44] - [02:07:47]

Akshat Bahety: I need to add an API key, okay?

[02:07:47] - [02:07:54]

Akshat Bahety: I need to add an API key. Now, I already have an API key. How to get an API key? I will show that to you also, because...

[02:07:54] - [02:07:56]

Akshat Bahety: I'm sure someone will have that doubt.

[02:07:58] - [02:08:03]

Akshat Bahety: Give me one second. I'm not going to show you my API key, at least, right, because...

[02:08:03] - [02:08:04]

Akshat Bahety: There's no point.

[02:08:04] - [02:08:07]

Akshat Bahety: So if I just switch to perplexity...

[02:08:07] - [02:08:09]

Akshat Bahety: You guys can't see my screen.

[02:08:09] - [02:08:10]

Akshat Bahety: Bye.

[02:08:10] - [02:08:15]

Akshat Bahety: You can see your screen, right? So, this is where you can go ahead and log in into

[02:08:15] - [02:08:24]

Akshat Bahety: API key, which is a perplexity dashboard, perplexity platform, and you can get out, you can get the API key, okay? I just created a new one, and I'm going to use it.

[02:08:24] - [02:08:33]

Akshat Bahety: Okay, we can just click on New Create Key and get it. I already have it, you will learn about this in breakout rooms also, so we'll go ahead and create the... use the API key.

[02:08:33] - [02:08:37]

Akshat Bahety: Getting an API key is not the challenge for today. That you will get it.

[02:08:37] - [02:08:39]

Akshat Bahety: Okay, so I'm gonna separate this.

[02:08:40] - [02:08:47]

Akshat Bahety: Come here, and I'm going to paste the API key. I'm just pasting it here, please don't use it, okay? So, we're going to test it first, and then deliver.

[02:08:47] - [02:08:50]

Akshat Bahety: Okay, so we have this, everything is good to go.

[02:08:51] - [02:09:03]

Akshat Bahety: We have added the API key, we have everything else, and I'm going to close this for now. So we have this tool, we have the MCP server trigger, and I'm going to rename this. I'm going to rename this, I'm going to just write it.

[02:09:03] - [02:09:05]

Akshat Bahety: Perplexity, search.

[02:09:06] - [02:09:07]

Akshat Bahety: Perplexity, search.

[02:09:08] - [02:09:08]

Akshat Bahety: Now...

[02:09:09] - [02:09:18]

Akshat Bahety: what I'm going to do is, I'm also going to change the name or the URL of my MCP server, just for the fun of it. There is no need to do this, but I want to.

[02:09:18] - [02:09:20]

Akshat Bahety: So I'm just going to write it perplexity.

[02:09:21] - [02:09:30]

Akshat Bahety: Okay? Done. Now all I need to do is click on Publish. I'm going to publish this so that my MCP server is active.

[02:09:31] - [02:09:45]

Akshat Bahety: Again, now, for everyone, why didn't we use Perplexity tool? Why didn't we connect Perplexity directly? I am trying to show you an example on how to create an MCP server. This is the simplest example with the most wide range of use case that is available.

[02:09:46] - [02:09:58]

Akshat Bahety: So, is there 17 different ways to connect perplexity? Yes. The goal is not to show you on how to connect perplexity, the goal is to actually just use this to explain you how to build an MCP server.

[02:09:59] - [02:10:00]

Akshat Bahety: Okay.

[02:10:01] - [02:10:02]

Akshat Bahety: Perfect.

[02:10:02] - [02:10:14]

Akshat Bahety: Now, we already have an API connected, we already have everything connected, right? And now we have the MCP server. Now, to connect this MCP server, I need to do quite literally just one step.

[02:10:14] - [02:10:19]

Akshat Bahety: I'm going to copy the production URL, okay? Remember, I'm going to copy the production URL,

[02:10:20] - [02:10:25]

Akshat Bahety: I'm going to copy this, and I'm going to come to Claude. I'm going to come to Claude.

[02:10:25] - [02:10:26]

Akshat Bahety: Okay?

[02:10:26] - [02:10:29]

Akshat Bahety: So, let's come back to Claude.

[02:10:30] - [02:10:32]

Akshat Bahety: I am in Claude.

[02:10:33] - [02:10:39]

Akshat Bahety: And I'm going to go to, very simply, I'm going to go to Customize, if I can find that

[02:10:40] - [02:10:44]

Akshat Bahety: hair, because every time I try to find it, it goes away. So, okay.

[02:10:44] - [02:10:48]

Akshat Bahety: I'm going to come to connectors, because I'm already here.

[02:10:48] - [02:10:51]

Akshat Bahety: I just need to add my MCP URL.

[02:10:51] - [02:11:02]

Akshat Bahety: And type in perplexity test. Just, why am I adding test? Just because I remember that it is called perplexity test. You can write whatever you want. You can write whatever you... you can write, like, you know, again.

[02:11:02] - [02:11:03]

Akshat Bahety: Random name.

[02:11:04] - [02:11:11]

Akshat Bahety: Here, whatever you want, okay? I'm just putting this for my own part, and then I'm adding the URL that we got.

[02:11:11] - [02:11:12]

Akshat Bahety: Okay.

[02:11:14] - [02:11:15]

Akshat Bahety: Good to go?

[02:11:15] - [02:11:17]

Akshat Bahety: And I'm going to click on continue.

[02:11:18] - [02:11:24]

Akshat Bahety: There is no sign-in required on this. Did you see me sign in? Is there any authentication we have added? Yes, no?

[02:11:25] - [02:11:27]

Akshat Bahety: Is there any authentication that we need for this?

[02:11:28] - [02:11:32]

Akshat Bahety: No? Right? Like, it's open. My API key is already there, so I'm just going to select no.

[02:11:33] - [02:11:34]

Akshat Bahety: We'll click on Add.

[02:11:35] - [02:11:39]

Akshat Bahety: It's going to check the connection, let's see what happens.

[02:11:39] - [02:11:43]

Akshat Bahety: You are not connected to Perplexity test, yes. I'm going to click on Connect.

[02:11:45] - [02:11:47]

Akshat Bahety: And now, we are connected.

[02:11:48] - [02:11:55]

Akshat Bahety: And we have, as you can see, can you see the tool? Can you see the tool name that we have here? Can you see the tool name?

[02:11:56] - [02:12:05]

Akshat Bahety: Yes? Is this the same tool name that is available on our NN also? You want to test, see here, is it? It's the same tool name that exists, Perplexity Search.

[02:12:06] - [02:12:08]

Akshat Bahety: It's perplexity search.

[02:12:09] - [02:12:10]

Akshat Bahety: Okay.

[02:12:10] - [02:12:11]

Akshat Bahety: No.

[02:12:11] - [02:12:17]

Akshat Bahety: Let's do a small, quick recap before we do the demo. I'm going to do a small, quick recap of what we have done.

[02:12:18] - [02:12:22]

Akshat Bahety: It's very simple, and I'm going to, like, you know, again, I'm going to explain you

[02:12:22] - [02:12:25]

Akshat Bahety: One by one, in a more simpler way.

[02:12:25] - [02:12:27]

Akshat Bahety: Very simply.

[02:12:28] - [02:12:30]

Akshat Bahety: We want to build an MCP, okay?

[02:12:30] - [02:12:36]

Akshat Bahety: For an MCP, we need a... everything in an MCP works via MCP URLs, okay?

[02:12:37] - [02:12:38]

Akshat Bahety: Okay?

[02:12:38] - [02:12:39]

Akshat Bahety: Okay?

[02:12:43] - [02:12:45]

Akshat Bahety: Okay, MCP URLs.

[02:12:45] - [02:12:53]

Akshat Bahety: And MCP URLs are everything. Everything is a URL. So if I search for Higgs field MCP also, as we did, it's just a URL, okay?

[02:12:53] - [02:13:00]

Akshat Bahety: This is just a URL. You can see it, like, you know, again, in Claude, it just asks you to add a URL. Do you all know this is a URL?

[02:13:01] - [02:13:04]

Akshat Bahety: Can we agree this is a URL? URL is just, like...

[02:13:05] - [02:13:20]

Akshat Bahety: Like, I don't want to give the full form, like, URL is just any website, like, google.com is a URL, okay? Like, a web address, yes, thanks. So, like, this is a URL, okay? So this is, like, if you write https google.com, that is also a URL.

[02:13:20] - [02:13:22]

Akshat Bahety: Guys, I know the... I know the full form.

[02:13:22] - [02:13:28]

Akshat Bahety: if I tell that full form, it will become more confusing. So, just anywhere, this is all that it is. Okay?

[02:13:29] - [02:13:32]

Akshat Bahety: So, we need a URL to connect to any MCP.

[02:13:32] - [02:13:36]

Akshat Bahety: behind every MCP URL, right, Okay?

[02:13:37] - [02:13:51]

Akshat Bahety: Behind every MCP URL, there are tools, okay? There are tools, and you can have multiple tools. You can have multiple tools here. You can have a tool to search, you can have a tool to create image, whatever you need, okay?

[02:13:51] - [02:13:52]

Akshat Bahety: No.

[02:13:52] - [02:13:59]

Akshat Bahety: We are just going to create a simple tool for searching. We're just going to utilize a simple tool for searching.

[02:14:00] - [02:14:12]

Akshat Bahety: To give the function, like, a tool can be anything. A tool can be a calculator. We can give a tool to calculate things, right? We can create any kind of tool. For searching this, we are going to use perplexity.

[02:14:13] - [02:14:14]

Akshat Bahety: Is this clear till here?

[02:14:18] - [02:14:21]

Akshat Bahety: Is it clear? Write clear in the chat.

[02:14:22] - [02:14:23]

Akshat Bahety: Okay.

[02:14:26] - [02:14:32]

Akshat Bahety: Okay, clear in the chart, perfect, right? So we're going to use search, we're going to use perplexity, and we're going to use that.

[02:14:33] - [02:14:40]

Akshat Bahety: Now, how do we use Perplexity? Perplexity is not my company, right? That it will tell me, like, okay, you know, Er is Akshat, air is everything, go ahead and use it.

[02:14:41] - [02:14:47]

Akshat Bahety: Perplexity says that if you want to use our tool to search, you can use an API.

[02:14:47] - [02:14:50]

Akshat Bahety: Okay? You can use our API.

[02:14:50] - [02:14:57]

Akshat Bahety: And you can build whatever you want. I am trying to build my own MCP server. They are saying that if you want to build whatever you want, you use our APIs.

[02:14:57] - [02:14:59]

Akshat Bahety: Is that clear?

[02:14:59] - [02:15:01]

Akshat Bahety: Use to build whatever you want.

[02:15:04] - [02:15:20]

Akshat Bahety: clear... we are clear with what are we... why are we using an API. Now, they say, okay, Akshat, if you want to build an API, right, if you want to use our API, we already have everything documented. It is available on the web, so documented, and available on the web.

[02:15:21] - [02:15:33]

Akshat Bahety: Okay? And the way to use it across the world is via a tool. If you want to use our API, so I'm going to write this sentence so that you remember it. If you want to use our API,

[02:15:36] - [02:15:39]

Akshat Bahety: Please use our curl command.

[02:15:40] - [02:15:43]

Akshat Bahety: Okay? That is the easiest way to use it.

[02:15:45] - [02:15:49]

Akshat Bahety: Is it clear on every step on how we have gone down?

[02:15:50] - [02:16:00]

Akshat Bahety: There are 3 steps. We have an MCP, we created an MCP trigger, we then added a tool. To configure that tool, we have added a curl command.

[02:16:02] - [02:16:10]

Akshat Bahety: Okay? This is how... and again, this is not how I want to do it, or we want to do it, this is how the world is doing it. So, we have to follow the same steps.

[02:16:11] - [02:16:11]

Akshat Bahety: Okay?

[02:16:14] - [02:16:15]

Akshat Bahety: Simple.

[02:16:16] - [02:16:25]

Akshat Bahety: If it is simple now, write simple in the chat, because, again, we have gone through this explanation quite a bit of time, and I understand... hopefully understand that you can do this.

[02:16:29] - [02:16:30]

Akshat Bahety: Okay.

[02:16:31] - [02:16:33]

Akshat Bahety: Perfect. Good. Amazing. Okay?

[02:16:34] - [02:16:49]

Akshat Bahety: Now, what I'm going to do is, very simply, okay? I'm going to very simply map this all. Yes, I'm going to map this all to everything that I've showed you in NHN, okay? I'm going to map this all, every, like, you know, every sentence via into NATN.

[02:16:49] - [02:16:57]

Akshat Bahety: So, MCP URL, okay, we needed an MCP URL. For that MCP URL, we added an MCP server trigger.

[02:16:57] - [02:17:06]

Akshat Bahety: Okay? We are adding an MCP server trigger, which already gives a URL. Can you see the URL on my screen, this massive, beautiful thing, written MCP URL?

[02:17:06] - [02:17:10]

Akshat Bahety: Yes, you can see MCP URL, you understood with it, clear.

[02:17:11] - [02:17:12]

Akshat Bahety: Yes?

[02:17:12] - [02:17:20]

Akshat Bahety: Good. Perfect. Okay? So you can see the URL. Everything works in the same way. And then we have a URL. So the first step, done.

[02:17:21] - [02:17:24]

Akshat Bahety: And to do that step, use the MCP server trigger.

[02:17:25] - [02:17:26]

Akshat Bahety: Then.

[02:17:26] - [02:17:28]

Akshat Bahety: Next step is to add a tool.

[02:17:29] - [02:17:35]

Akshat Bahety: For the tool, we searched for HTTP request, right? We searched for HTTP request.

[02:17:35] - [02:17:38]

Akshat Bahety: Clear. We search for an HTTP request tool.

[02:17:40] - [02:17:45]

Akshat Bahety: Everyone is clear with that. We used search with an HTTP tool request.

[02:17:47] - [02:17:53]

Akshat Bahety: I want in chat, I want everyone to write, like, you know, again, you're clear and good to go, okay? Good.

[02:17:53] - [02:18:03]

Akshat Bahety: Now, to configure this tool, we needed an API. To configure this tool, we needed an API. That API, I just went on the web.

[02:18:04] - [02:18:07]

Akshat Bahety: went and searched for Perplexity API documentation.

[02:18:08] - [02:18:10]

Akshat Bahety: perplexity API documentation.

[02:18:11] - [02:18:12]

Akshat Bahety: Okay?

[02:18:12] - [02:18:20]

Akshat Bahety: And I went and said, I just need the search API, so can you give me that? Can you give me the command that I need to use?

[02:18:20] - [02:18:29]

Akshat Bahety: I came here and got the curl command. So I got the curl command, which is available on the web, which we needed to use.

[02:18:30] - [02:18:35]

Akshat Bahety: clear with that, and once I got that command, I just came back here.

[02:18:35] - [02:18:46]

Akshat Bahety: click on import curl, because I don't know how to use this command, right? You guys are, like, again, not going to spend your time, okay, where to paste what? You just click on import curl, and you paste your command, and good to go with it.

[02:18:48] - [02:18:51]

Akshat Bahety: Are we clear on how this workflow got built?

[02:18:52] - [02:18:53]

Akshat Bahety: Yes?

[02:18:55] - [02:18:56]

Akshat Bahety: Clear.

[02:18:57] - [02:18:59]

Akshat Bahety: Good to go?

[02:19:01] - [02:19:03]

Akshat Bahety: Prade? Okay.

[02:19:03] - [02:19:05]

Akshat Bahety: Perfect. Amazing.

[02:19:06] - [02:19:07]

Akshat Bahety: No.

[02:19:08] - [02:19:09]

Akshat Bahety: Okay.

[02:19:09] - [02:19:12]

Akshat Bahety: I'm just going to demo this on Claude.

[02:19:12] - [02:19:19]

Akshat Bahety: We copied this command, we copied the production URL, we went to... we went to Claude.

[02:19:19] - [02:19:32]

Akshat Bahety: And, very simply, I went to my connectors, because in connectors only, you can... in connectors only, you can add an MCP. I'm going to click on add, and I pasted on.

[02:19:32] - [02:19:34]

Akshat Bahety: MCP server URL.

[02:19:35] - [02:19:36]

Akshat Bahety: Okay.

[02:19:38] - [02:19:38]

Akshat Bahety: Okay.

[02:19:39] - [02:19:40]

Akshat Bahety: Simple.

[02:19:45] - [02:19:46]

Akshat Bahety: Okay.

[02:19:48] - [02:19:50]

Akshat Bahety: And once I added this.

[02:19:51] - [02:20:00]

Akshat Bahety: Once I added this, I got a connector connected. So I can see I have my connector connected. I will repeat this step so that you guys can see this, okay? We are going to disconnect this, I'll connect again.

[02:20:01] - [02:20:04]

Akshat Bahety: I'll delete this whole perplexity test from here.

[02:20:08] - [02:20:18]

Akshat Bahety: We're going to come here. Why a connector? Why? Because connectors are called... MCPs are called connectors in cloud now, for some reason, because I'm not part of their marketing team.

[02:20:18] - [02:20:23]

Akshat Bahety: And neither are you. And they will keep confusing us. Remember that, okay?
It's all part of marketing.

[02:20:24] - [02:20:27]

Akshat Bahety: Okay, that's it. That's why we are here. Okay?

[02:20:27] - [02:20:29]

Akshat Bahety: Okay? So yeah.

[02:20:32] - [02:20:39]

Akshat Bahety: Then, we add the URL, alright, and then we can come here and add, like, whatever you want to name it, I'm just going to add it.

[02:20:40] - [02:20:41]

Akshat Bahety: Perplexity test.

[02:20:42] - [02:20:44]

Akshat Bahety: I'm going to click on continue.

[02:20:44] - [02:20:49]

Akshat Bahety: Okay? And then, we don't need to sign in, so we are just going to click on Add.

[02:20:53] - [02:20:54]

Akshat Bahety: And I'm going to click on Connect.

[02:20:58] - [02:21:01]

Akshat Bahety: And we are good to go.

[02:21:04] - [02:21:05]

Akshat Bahety: Okay?

[02:21:05] - [02:21:10]

Akshat Bahety: Can you add it to ChatGPT also? Yes, you can. Right? There, it will be called a plugin.

[02:21:10] - [02:21:15]

Akshat Bahety: Just for the fun of it, right? Why make it simple when they can confuse you, okay? So that's it.

[02:21:16] - [02:21:25]

Akshat Bahety: Okay, so we got the URL, we got everything, I'm going to switch it to always allow, and let's test it, if it works. Let's test if it works. This is the truth, okay?

[02:21:25] - [02:21:27]

Akshat Bahety: So I'm going to come here and say...

[02:21:28] - [02:21:31]

Akshat Bahety: I don't know what to search also for now.

[02:21:31] - [02:21:38]

Akshat Bahety: Can you tell me... about... I don't know, Indian hockey team.

[02:21:39] - [02:21:43]

Akshat Bahety: Using perplexity. I don't have any queries left in me today, okay?

[02:21:44] - [02:21:47]

Akshat Bahety: So, we're going to ask it that, right?

[02:21:51] - [02:21:57]

Akshat Bahety: Okay, and you can see it has automatically started using that NATNMCP, right?

It has started using that NATNMCP.

[02:21:58] - [02:22:01]

Akshat Bahety: And it told me that my perplexity connector is broken.

[02:22:05] - [02:22:06]

Akshat Bahety: Sweet, let's see.

[02:22:11] - [02:22:16]

Akshat Bahety: Okay, wait. Did it really break, or is it... okay, my publisher.

[02:22:19] - [02:22:24]

Akshat Bahety: We added this, we added the path. I'm going to... now I'm testing it right again on this side.

[02:22:26] - [02:22:28]

Akshat Bahety: No, it's working. Seems to be working.

[02:22:33] - [02:22:34]

Akshat Bahety: Okay.

[02:22:34] - [02:22:38]

Akshat Bahety: probably, like, you know, again, there is something that is already configured, which should not have been.

[02:22:41] - [02:22:45]

Akshat Bahety: Yeah, okay, I'll show you guys, okay? So, very simply, there is one thing that was available

[02:22:45] - [02:22:51]

Akshat Bahety: That should have been switched, which, when you copied and pasted, when I copied and pasted the curl command.

[02:22:51] - [02:22:57]

Akshat Bahety: So if you come here, you need to, like, you know, again, in this body parameter, in this body parameter.

[02:22:57] - [02:23:11]

Akshat Bahety: No, nothing is there in the body parameter. You need to click the AI option, so that AI can automatically decide what to do. Okay? That's it. Nothing else. Don't worry about anything else. You just need to decide that everything needs to be decided by AI.

[02:23:11] - [02:23:15]

Akshat Bahety: Okay? See? Things break. You can fix them. Don't worry.

[02:23:15] - [02:23:17]

Akshat Bahety: Okay, so we did that.

[02:23:18] - [02:23:22]

Akshat Bahety: And I'm going to close this, publish it again, and it will work.

[02:23:27] - [02:23:33]

Akshat Bahety: Okay, let's test it again, and hopefully it works this time, right? Let's... hopefully it works this time. I'm going to go ahead...

[02:23:36] - [02:23:41]

Akshat Bahety: And let's see, I'm going to close Claude, open Claude again, and share my screen. Give me one minute.

[02:23:46] - [02:23:48]

Akshat Bahety: Connectors... let me share my screen.

[02:23:49] - [02:23:51]

Akshat Bahety: I'm in Claude.

[02:23:55] - [02:23:56]

Akshat Bahety: Okay, I'm in Florida.

[02:24:00] - [02:24:02]

Akshat Bahety: And we should be able to use it now.

[02:24:03] - [02:24:06]

Akshat Bahety: Can you search perplexity now?

[02:24:24] - [02:24:28]

Akshat Bahety: K... Should be able to use it now.

[02:24:32] - [02:24:36]

Akshat Bahety: You can see, again, there is probably something failing, right, again.

[02:24:39] - [02:24:42]

Akshat Bahety: And I don't know why. There is something, like, I can proudly...

[02:24:47] - [02:24:54]

Akshat Bahety: And there's going to be some problem that is going to be... this is, like, again, this has been always a challenge. Every time I try to configure something, it works.

[02:24:54] - [02:25:05]

Akshat Bahety: My API key is working well. I'm going to take, like, probably one minute to, like, decode this. If not, we are just going to ignore it and move forward. Okay, so I'm going to try one last thing. If it works, great. If not, I'm just going to leave it.

[02:25:08] - [02:25:09]

Akshat Bahety: And that is life.

[02:25:09] - [02:25:13]

Akshat Bahety: Every time, like, again, you are demoing something, there will be something that will work out.

[02:25:13] - [02:25:15]

Akshat Bahety: And something won't.

[02:25:23] - [02:25:33]

Akshat Bahety: So this will be the same as actual per plate. Yeah, technically, it's like, again, it's getting broken down, we'll see why. Okay, we'll try one last time, else not. I have to close Claude and try again, so...

[02:25:33] - [02:25:34]

Akshat Bahety: Let me see if it can.

[02:25:37] - [02:25:43]

Akshat Bahety: Okay, search perplexity... for India team.

[02:25:52] - [02:25:53]

Akshat Bahety: Ew.

[02:25:58] - [02:26:03]

Akshat Bahety: Now, there is some issue, which I will probably, like, again, I will let it be on, like, you know, again.

[02:26:03] - [02:26:10]

Akshat Bahety: It's going to be, like, you know, always going to create issues, and I have no reason why. Like, again, there is literally nothing that seems to be broken here.

[02:26:12] - [02:26:16]

Akshat Bahety: In Ann, it seems to work, guys. Like, if you want to see, like, so in Ann, it is properly working.

[02:26:16] - [02:26:18]

Akshat Bahety: I was able to run.

[02:26:18] - [02:26:33]

Akshat Bahety: Right, again. I was able to run everything in NHL, and it was working properly. Now, could be there is something that is different, right again, but yeah, it's working properly in NHN. The API key seems to... yeah. Okay, wait, I missed this one. I... once I updated the

[02:26:34] - [02:26:37]

Akshat Bahety: Thanks, so yes, API key was missed.

[02:26:38] - [02:26:41]

Akshat Bahety: We'll try one last time. Let's see if it works or not.

[02:26:43] - [02:26:45]

Akshat Bahety: Demog gods are not with us.

[02:26:46] - [02:26:47]

Akshat Bahety: That's so weird.

[02:26:54] - [02:27:02]

Akshat Bahety: It is okay. This is, like, again, this is always, like, again, I'll tell you one thing, right, like, you know, again, every time you're doing something, it will always, like, again, there is something that will obviously cause an issue.

[02:27:04] - [02:27:10]

Akshat Bahety: Let's see, I am, like, again... I'm going to switch... I'm going to refresh the screen also.

[02:27:11] - [02:27:13]

Akshat Bahety: Search for Sanju... Sanghu Samson, it will work.

[02:27:14] - [02:27:20]

Akshat Bahety: I wish it worked like that. I'm going to restart Claude and see if it can work now.

[02:27:25] - [02:27:26]

Akshat Bahety: Give me one minute.

[02:27:33] - [02:27:40]

Akshat Bahety: Let's see... If it doesn't work now, you know that, like, you know, again.

[02:27:40] - [02:27:41]

Akshat Bahety: Ar...

[02:27:41] - [02:27:49]

Akshat Bahety: I'll just, like, you know, I'm going to try this with my own self, and if not, we are going to, like, you know, leave it, and you guys will learn this in, like, you know, in breakout rooms, yeah.

[02:27:50] - [02:27:52]

Akshat Bahety: Search for Sanghu Saman, let's see.

[02:28:00] - [02:28:08]

Akshat Bahety: No, this is... it's going to search normally. No, I want it to... Search for Sanju Samson.

[02:28:08] - [02:28:10]

Akshat Bahety: Using perplexity.

[02:28:20] - [02:28:25]

Akshat Bahety: Yeah. Something seems to be failing, no matter what, okay? So...

[02:28:26] - [02:28:29]

Akshat Bahety: It has the requests, right? Again, it has everything.

[02:28:30] - [02:28:30]

Akshat Bahety: But...

[02:28:31] - [02:28:45]

Akshat Bahety: for some reason, it seems to be failing. Well, it is okay. We will, like, again... I'm going to accept defeat for this instead of, like, you know, again, you'll probably, like, you know, again, yeah, you'll probably spend time on learning this. But it... we still got the details, right, again, from here. Okay.

[02:28:45] - [02:28:50]

Akshat Bahety: Perplexity search... okay, it worked. It worked! It worked, guys. Yes.

[02:28:50] - [02:28:51]

Akshat Bahety: It worked in the second time.

[02:28:53] - [02:28:55]

Akshat Bahety: Yes. Good.

[02:28:55] - [02:29:10]

Akshat Bahety: Sanghu Sam-san, you can see the response, I'm not kidding, like, it really worked, right? So, I'm happy it worked, right? Why did it fail? I missed the API key on the second time, so miss on my end. But good, right? Again, you see, like, things actually go wrong, right? And that's fun, so...

[02:29:11] - [02:29:13]

Akshat Bahety: This is life, okay? But, with that.

[02:29:14] - [02:29:19]

Akshat Bahety: Quick recap of all the things that we learned today, and all the things that you can do.

[02:29:19] - [02:29:23]

Akshat Bahety: I'm, like, you know, again... The reality is that

[02:29:24] - [02:29:27]

Akshat Bahety: Every time, like, you know, this is how APIs... this is how MCP works.

[02:29:28] - [02:29:32]

Akshat Bahety: And it's simply, like, you know, again, every time you are in a restaurant, and you go ahead and give an order.

[02:29:33] - [02:29:45]

Akshat Bahety: like, it automatically works on the backend. You technically don't care, okay? You technically don't care what happens. You just order, and you get the food. Have you ever... until unless you have, like, you know.

[02:29:45] - [02:29:49]

Akshat Bahety: How many of you have ever visited a kitchen? How many of you have ever visited a restaurant kitchen?

[02:29:51] - [02:29:55]

Akshat Bahety: like a massive restaurant, official kitchen. Some people, yes, no.

[02:29:55] - [02:29:59]

Akshat Bahety: Right, once. Do you go every time that you order food? Yes, no?

[02:30:00] - [02:30:02]

Akshat Bahety: No, right? Because you couldn't care less.

[02:30:03] - [02:30:07]

Akshat Bahety: You couldn't care less. You are here to eat food, you're not here to make food, and that's why MCPs work.

[02:30:07] - [02:30:10]

Akshat Bahety: If once it starts working, you just ask it.

[02:30:10] - [02:30:18]

Akshat Bahety: And then you get the results back. For example, we got Sanghu Samson results back, right? He's probably quite lucky, right, that he got all of that.

[02:30:18] - [02:30:30]

Akshat Bahety: And that's how MCP works. You don't need to worry about any kind of, like, you can say. You just ask, and you get. You don't worry about step 2, 3, and 4. That is all for Claude and things to figure out.

[02:30:31] - [02:30:32]

Akshat Bahety: Okay.

[02:30:32] - [02:30:42]

Akshat Bahety: So, it is completely for Claude to figure out. This is just an example, right, that you don't need to worry about how the tools are working on the backend, you just need to use them going forward.

[02:30:42] - [02:30:43]

Akshat Bahety: And...

[02:30:44] - [02:31:01]

Akshat Bahety: I'll tell you one thing I like, again. I use so many MCPs in my daily life. I don't have, like, again, like, you know, again, very specific example that I can just tell, but, like, my whole financial life, all planning, is done by MCPs. Like, I have connected everything that I have on my financial tools with Claude.

[02:31:02] - [02:31:11]

Akshat Bahety: And they tell me what needs to be done every month. That's it. It gets access from my email, it gets access from my portfolio, it gets access to my... every, like, you know, again, statements, and it picks up everything.

[02:31:12] - [02:31:21]

Akshat Bahety: The idea is that you should be reducing the time. I... some kind of financial planning used to take me, like, let's say, like, you know, let's say a couple of days before AI. Now it takes 2 hours.

[02:31:22] - [02:31:24]

Akshat Bahety: That's it, because it's so much better with AI.

[02:31:25] - [02:31:33]

Akshat Bahety: It has access to everything that I do. And I keep adding more and more tools to work. What about security and privacy? I just want to say.

[02:31:33] - [02:31:40]

Akshat Bahety: I have dealt with it. I don't think anything is secure, I don't think anything is private, everything is available in somewhere in the world.

[02:31:40] - [02:31:48]

Akshat Bahety: Okay? So, I don't worry about it so much, right? From a technology perspective, these tools are pretty secure. They have OAuth and everything else built in, so...

[02:31:48] - [02:31:57]

Akshat Bahety: Okay, you should just have some kind of fun with it. My suggestion to everyone is, your job is to make AI work for you, okay?

[02:31:57] - [02:31:59]

Akshat Bahety: My job is to make, like, you know.

[02:32:00] - [02:32:08]

Akshat Bahety: it fun for you, and your job is to make sure that AI works for you. So go ahead and build at least, like, you know, one use case for yourself.

[02:32:08] - [02:32:19]

Akshat Bahety: It could be as simple as, like, you know, letting it read your emails and finding out what are the most important ones. It's super simple, but so many... how many of you have that setup? How many of you use AI to read your emails every day?

[02:32:20] - [02:32:22]

Akshat Bahety: Write in the chat email. In the chat.

[02:32:24] - [02:32:34]

Akshat Bahety: Right? Exactly, like, so many people, yeah, even if you don't, great, be honest, right? Like, out of, like, 100 people, let's say 100% of here, right now, there is, like, around

[02:32:34] - [02:32:35]

Akshat Bahety: What?

[02:32:35] - [02:32:37]

Akshat Bahety: Less than 20% people use it.

[02:32:38] - [02:32:47]

Akshat Bahety: Imagine, you probably use... have a lot of emails, and you probably need to use it, so go ahead, right? And you can let it allow within AI to go from there.

[02:32:47] - [02:32:50]

Akshat Bahety: In addition to that, like, you know, again, remember that

[02:32:50] - [02:33:00]

Akshat Bahety: you need to buy back time with AI. So, if you're spending \$20, \$40, \$50, \$60 on AI, you need to get that much back in whatever time is worth, and you can do that much for yourself.

[02:33:00] - [02:33:13]

Akshat Bahety: And at the same time, right, again, as you can see, things will break, and I'm glad it broke, right? Again, as much as I was, like, again, not super happy that it broke, but I'm glad it broke. Your job is to ensure that when it breaks, you can go ahead and use AI to fix it.

[02:33:13] - [02:33:27]

Akshat Bahety: And at the same time, have fun with it, right? Again, build more use cases, and break your head. Like, if you're not... when you're learning AI, you need to ensure that you are sitting on a table, and you are just like, why doesn't this work?

[02:33:27] - [02:33:34]

Akshat Bahety: at 12am at the night, and be like, why? And just, like, bang your head over the table. Don't literally bang it.

[02:33:34] - [02:33:41]

Akshat Bahety: That's when you know you are learning. You're not learning when you are just having fun, you get everything. You're learning when you break things.

[02:33:41] - [02:33:50]

Akshat Bahety: I learned, like, you know, to never forget an API key next time, right? So, that's it, okay? And have fun with it, and pretty much with that.

[02:33:50] - [02:33:54]

Akshat Bahety: That's all we had for today from MCP, and I give it over back to Uthappa.

[02:33:57] - [02:34:02]

Uthappa Outskill: Alright, thank you. Thank you so much, Akshat. Folks, how was that?

[02:34:04] - [02:34:07]

Uthappa Outskill: Day 5, great lesson, wonderfully.

[02:34:08] - [02:34:14]

Uthappa Outskill: Wonderful. I see, not many of you are sharing your gratitude for the mentors, whatever part you liked.

[02:34:15] - [02:34:34]

Uthappa Outskill: on the LMS, so make sure you also drop your gratitude to all these wonderful mentors who keep sharing their knowledge with you. And one good thing that happened is you also learned how to debug today. Like, when something doesn't work, how do you go about

debugging it? So that's a very crucial part of being an agent list. So, thank you so much, Akshat, for doing this. We'll again see you in the coming week.

[02:34:35] - [02:34:37]

Akshat Bahety: Sure. Thanks, Arun. Thank you guys. Bye-bye.

[02:34:37] - [02:34:38]

Uthappa Outskill: Thank you.

[02:34:45] - [02:34:47]

Uthappa Outskill: Alright, now before we go to break...

[02:34:48] - [02:34:54]

Uthappa Outskill: I'll take some 10-15 minutes. I want to cover a section where

[02:34:54] - [02:35:07]

Uthappa Outskill: how do you go about... now... now you have all of this knowledge that you have gained, and there's a lot more that is coming up as well. And there is also a question around, how do I make sense of a couple of these things? How do I go about implementing it? Because...

[02:35:07] - [02:35:24]

Uthappa Outskill: let me get started on that, on what I feel your state of mind at this point of time is, and then we'll start unlocking it, and then we'll see what is the right approach for you to go ahead in implementing AI, whether it can be at your workplaces, at your own businesses, how do you approach that?

[02:35:24] - [02:35:41]

Uthappa Outskill: Okay? So we'll take around 10-15 minutes around this. You will still learn how to build these MCP servers in the breakout room, that is activity for the day. You'll learn how to create it using an ATIN. There was one question I saw in the chat which is important for me to address. Somebody asked me... asked us in the chat.

[02:35:42] - [02:35:45]

Uthappa Outskill: why do I have to do this? Like, the... the last two...

[02:35:45] - [02:35:56]

Uthappa Outskill: couple of minutes that we took about... took around how to build your own MCP server using, N1N, when a couple of things are already available inside Cloud or Codex, right? Why did we do this? Any guesses? Why did we do this?

[02:35:57] - [02:36:02]

Uthappa Outskill: Why is it, necessary for you to understand how to build these MCP servers?

[02:36:02] - [02:36:12]

Uthappa Outskill: First of all, we are not technical, so this is the most non-technical way of building an MCP server I can think of at this point. But any other... let's see if I get that right.

[02:36:13] - [02:36:15]

Uthappa Outskill: Background knowledge to connect to the system.

[02:36:16] - [02:36:20]

Uthappa Outskill: Yeah, someone mentioned, if it does not exist inside Claude.

[02:36:21] - [02:36:23]

Uthappa Outskill: Now, there are so many tools out there.

[02:36:23] - [02:36:31]

Uthappa Outskill: Some of them, if you see, if you just go through the connectors section, you'll probably see, what, 100, 200, at max 300 MCP servers, I don't know the exact count, but...

[02:36:31] - [02:36:45]

Uthappa Outskill: But you know that's not the exact number of tools that exist out there for your workflows, right, or your day-to-day work. So, any tool out there which has an API endpoint, or if you're yourself creating a tool, and it, for example, let's say it doesn't have

[02:36:45] - [02:36:58]

Uthappa Outskill: any endpoints right now, you create your own AP endpoints, white code it, or with the help of your tech team. You can convert it into an MCP server, and then add it inside Cloud or ChatGPT or Codex in this particular fashion.

[02:36:58] - [02:37:12]

Uthappa Outskill: Right? Example I'm telling you, Whisper Flow doesn't have an inbuilt integration as an MCP server within, let's say Claude... the last I checked, I don't know if they changed anything today. It doesn't have an inbuilt MCP server inside Claud or Chat JP.

[02:37:12] - [02:37:23]

Uthappa Outskill: But they have an MCP server, it is not just available for you to directly integrate it inside ChatGPT or Plot. So then there is a way they have exposed an MCP server URL, which will go back and

[02:37:23] - [02:37:35]

Uthappa Outskill: link it to your Cloud Air or ChatGPT. Similarly, if there's any other tool out there which doesn't have an MCP server at all, but has an API endpoint, you can create it in this fashion, like how Akshat showed you today, and then integrate it into your

[02:37:35] - [02:37:39]

Uthappa Outskill: Claude or ChatGPT. Did that unders... were you able to understand why

[02:37:39] - [02:37:42]

Uthappa Outskill: This part might be helpful for you.

[02:37:45] - [02:37:47]

Uthappa Outskill: Perfect. Wonderful.

[02:37:48] - [02:37:49]

Uthappa Outskill: Okay, enough.

[02:37:50] - [02:37:55]

Uthappa Outskill: Day 5 is done, I want... I want... whatever you learned right now, just park it for the next 10-15 minutes, and then we get to the break.

[02:37:55] - [02:37:58]

Uthappa Outskill: Tell me, at the end of day 5,

[02:37:58] - [02:38:06]

Uthappa Outskill: Do you see how you can use AI at your company or workplaces, or are you still wondering how to make this work at your workplaces?

[02:38:07] - [02:38:10]

Uthappa Outskill: Is it... Option 1 or option 2?

[02:38:11] - [02:38:16]

Uthappa Outskill: Do you already have a vision of, okay, this is how I'm going to use it, or you're still trying to figure out how to make use of it?

[02:38:18] - [02:38:27]

Uthappa Outskill: Okay, I see a split audience here, in between. Okay, honest answer. Got it. So most of them in option 2, and a couple of them are in between. Great.

[02:38:27] - [02:38:45]

Uthappa Outskill: Now, this is something that we also see, right? Because we have been doing this for more than a year right now. People learn AI at... I mean, through these 14 days, you're constantly learning these AI skills, you're building this knowledge on these tools, but where you get stuck is with the adoption, or where learners generally get stuck, or even companies for that matter, not... I'm not even talking about learners.

[02:38:45] - [02:38:49]

Uthappa Outskill: I'm even talking about companies, they get stuck at adoption, they take an initiative, but they're stuck at it.

[02:38:50] - [02:38:54]

Uthappa Outskill: The reason is because they are missing the right direction on an approach.

[02:38:54] - [02:38:58]

Uthappa Outskill: to do an AI implementation within their own organizations or workplaces.

[02:38:58] - [02:39:09]

Uthappa Outskill: So, for the next 10 to 15 minutes, I want to talk to you about something more useful than any tool we have showed you up to this point right now, which is understanding how real AI can actually work.

[02:39:09] - [02:39:13]

Uthappa Outskill: How AI... real AI work actually happens within your own companies.

[02:39:14] - [02:39:15]

Uthappa Outskill: Right?

[02:39:15] - [02:39:25]

Uthappa Outskill: Because we also talk to a lot of companies as part of the training, so just wanted to give you a couple of insights on that as well. The distinction I want to basically spend for the next few minutes on is...

[02:39:25] - [02:39:27]

Uthappa Outskill: Using AI versus using AI well.

[02:39:28] - [02:39:42]

Uthappa Outskill: You have seen what these tools can do all, put together, how they can come up to life and make things easier for you. So let's talk about how do you turn that capability into something useful that you can work with inside your own team and companies.

[02:39:43] - [02:39:54]

Uthappa Outskill: So, by the end of Day 5, the reason I asked the team to put the slide is, tell me one thing. I'm assuming this is how your brain might look at this point of time. When I ask you, okay, you've got so much of AI knowledge right now.

[02:39:55] - [02:40:00]

Uthappa Outskill: Right? So I'm probably assuming this is exactly how all of your

[02:40:00] - [02:40:15]

Uthappa Outskill: thought process right now is when it comes to implementing AI in your workflows or your personal life. And that is normal. The reason I wanted to tell you is this is normal. This is the starting point of view unlocking what an AI implementation can be for you, right? It took me almost a year to figure this out.

[02:40:16] - [02:40:25]

Uthappa Outskill: And honestly, there is no... there's no shortcut, folks. There's no shortcut. You will have to slowly start unthreading all of these knots, and

[02:40:25] - [02:40:29]

Uthappa Outskill: This will be what you feel... you'll feel like, or quite some time...

[02:40:29] - [02:40:49]

Uthappa Outskill: after even your program, you will still maybe in the same zone. It's not a reflection of what you know about AI, but it is going to be, basically, you are trying to figure out how AI can be integrated into your workflows, or what those systems might look like, which will finally start showing results for you. That figuring out is going to take a bit of time.

[02:40:49] - [02:40:56]

Uthappa Outskill: Right? In one line, you will have to figure out how to start replicating the traditional way of how you do things.

[02:40:57] - [02:41:05]

Uthappa Outskill: with much faster and less manual steps with the help of AI. That is a journey all of us take, and that is more of, like, a personalized journey.

[02:41:05] - [02:41:17]

Uthappa Outskill: Right? This generally comes together after your accelerator is done, because now you're all gaining the skill set, you're understanding how things fit into each other, and the clarity is something that will evolve with time.

[02:41:18] - [02:41:19]

Uthappa Outskill: So...

[02:41:20] - [02:41:32]

Uthappa Outskill: You'll also see, throughout the program, we talk more in terms of workflows. We want you to ditch the idea of sticking to a particular tool, like Cloud or ChatGPT, that is best, this is best. That's not the idea. You need to...

[02:41:32] - [02:41:42]

Uthappa Outskill: know how to orchestrate all these tools and work in terms of workflows, right? That's the mindset that we try to bring in through all of these sessions in the form of workflows that we, kind of cover.

[02:41:43] - [02:41:44]

Uthappa Outskill: So, I'm sure...

[02:41:44] - [02:42:01]

Uthappa Outskill: this was something that would have happened when computers came out as well, for the very first time, right? Couple of decades ago, when that first came out. I'm sure this is the same journey that they would have had. There's a big box sitting in your house or your office space, and how do you basically make it work for you?

[02:42:01] - [02:42:11]

Uthappa Outskill: Now, you see, that whole journey that has taken, the size has shrink, it has shrunk so much, now you have a smartphone, or a smartwatch, or a Mehta Air glasses that you can...

[02:42:11] - [02:42:25]

Uthappa Outskill: Basically, it is part of your day-to-day workflows right now, right? It has gotten integrated into your systems right now. It took some time, but now it is not so complex. And I feel all of us are in that phase as well when it comes to AI at this point of time.

[02:42:26] - [02:42:28]

Uthappa Outskill: What do I mean by that?

[02:42:28] - [02:42:31]

Uthappa Outskill: You're learning skill sets. You're learning the skills right now.

[02:42:32] - [02:42:42]

Uthappa Outskill: You will eventually start thinking in terms of workflows, and then your final design systems, the systems that you want to design for your workflows or your company, starts evolving.

[02:42:44] - [02:42:45]

Uthappa Outskill: Am I making sense?

[02:42:47] - [02:42:49]

Uthappa Outskill: Are you able to connect what I'm trying to say?

[02:42:51] - [02:42:52]

Uthappa Outskill: Cool. Got it.

[02:42:53] - [02:43:02]

Uthappa Outskill: to share my own personal experience of dealing with this, unblocking this whole, knotted threads, I initially made a mistake of building too much

[02:43:02] - [02:43:20]

Uthappa Outskill: around workflows, like, imaginary workflows, right? That I feel that I wanted to do, rather than designing for the workflows that I'm already doing, and that's something that we do. We try to create for something that is not part of your workflow right now. You're trying to get to some place, which is... which might not be the right place to start with.

[02:43:20] - [02:43:27]

Uthappa Outskill: Right? And also, sometimes VIP coding also can be a trap, because you put in so much of your imagination without even knowing what are you trying to solve for.

[02:43:28] - [02:43:29]

Uthappa Outskill: So how do you fix that?

[02:43:30] - [02:43:36]

Uthappa Outskill: The way to fix it, the first place to look is the everyday work that you do best.

[02:43:36] - [02:43:52]

Uthappa Outskill: Right? The places where time gets lost, where handoffs get delayed, and the same effort gets repeated every week. So you'll have to observe your own day-to-day workflows and what you're doing right now, and where is the best fit for these AI workflows to come in.

[02:43:53] - [02:44:13]

Uthappa Outskill: If you can relate to this, drop one such workflow or a piece of work that you do on a daily basis, where you see a scope for AI to get involved. I'll show... in the next slide, I'll show something that I was able to evolve after a couple of months on what I was able to build with the help of AI systems. I'll show it in the next slide, but if you have any such thoughts already.

[02:44:13] - [02:44:16]

Uthappa Outskill: Job applications, doable. Project management.

[02:44:16] - [02:44:20]

Uthappa Outskill: Posting on LinkedIn, okay? Email sorting, easy job.

[02:44:20] - [02:44:24]

Uthappa Outskill: CRM update, daily status update, underwriting the files.

[02:44:25] - [02:44:40]

Uthappa Outskill: Reconciliation, yes, Figma designed to create React components. You already have your use cases, folks, right? If you're not able to think through of a use case right now, you'll have to start observing what you do on a daily basis. That's your starting point to building an AI system.

[02:44:41] - [02:44:42]

Uthappa Outskill: So...

[02:44:43] - [02:44:53]

Uthappa Outskill: somewhere in between the last 12 months, I was trying to do a lot of VIP coding and create a product, as I told you, which was not resonating with what I wanted to,

[02:44:54] - [02:45:04]

Uthappa Outskill: what I do on a daily basis, right? For... I created for endless use cases. And then somewhere I stopped it, took the approach of solving for the work that I'm doing right now, rather than

[02:45:05] - [02:45:21]

Uthappa Outskill: what I imagine for me to do in the future, right? So, this is what I could come up with in the last couple of months. It is still work in progress, I just thought I'll give you perspective, so I've added it here. So, if you see, it's the same skill set that you will also be acquiring over the span of these 14 days.

[02:45:21] - [02:45:31]

Uthappa Outskill: plot code, Hermes, anti-gravity, everything that I've put here on the screen is something that you will be able to learn in the next two weeks.

[02:45:31] - [02:45:42]

Uthappa Outskill: And another thing is, it is completely powered by MCPs, right? Now, I wanted you to see the power of MCPs that, once you know how to connect these tools and create the workflows around it, how it can basically flow.

[02:45:43] - [02:45:46]

Uthappa Outskill: To give you... do you want me to explain how this works, or should I move forward?

[02:45:49] - [02:45:51]

Uthappa Outskill: Or is it easily understandable?

[02:45:52] - [02:45:53]

Uthappa Outskill: Okay.

[02:45:53] - [02:46:06]

Uthappa Outskill: Now, this is not for the company, this is for my own self, it is more about creating clarity within my own daily workflows. So basically, you have all these tools like Granola, Whisperflow, there's something called as Obsidian.

[02:46:06] - [02:46:08]

Uthappa Outskill: And all of these have...

[02:46:08] - [02:46:26]

Uthappa Outskill: especially, like, Granola and Whisper Pro have these MCP servers, so the information, for example, everything that you talk with your team, your meetings, any thoughts that you have, all of those information, and even... because we are part of this content

development, so we need to be researching a lot of these informations as well. So all of that, as raw input.

[02:46:26] - [02:46:30]

Uthappa Outskill: Gets fed into a folder on your local,

[02:46:30] - [02:46:47]

Uthappa Outskill: system. And then Cloud Code, which you'll learn next week, is basically going to convert this into, let's say, easily identifiable processable information for your LLMs. It is going to put into the local folders, categorizing it between work, personal, and all those stuff.

[02:46:47] - [02:46:54]

Uthappa Outskill: And this becomes the standard, or this becomes the memory or the knowledge base for all the other tools to interact with.

[02:46:55] - [02:47:00]

Uthappa Outskill: Right? And most of this, like, for example, Superbase connections, all of this is happening through MCP servers.

[02:47:00] - [02:47:12]

Uthappa Outskill: And using this is where your cloud code is interacting with it, your Hermes agent is interacting with it. The anti-gravity through which you can ship the content is going to be interacting with this folder, because it has all the context that is required for it.

[02:47:13] - [02:47:17]

Uthappa Outskill: Same way, any task that has been ingested through these,

[02:47:18] - [02:47:35]

Uthappa Outskill: WhisperFlow nodes is going to be added to a database which has all the tasks that I need to do, or my team has to do, and that is going to be visible for people at the... as an end user. Similarly, the Slack, the email, somebody said you wanted to sort out your emails.

[02:47:35] - [02:47:40]

Uthappa Outskill: You don't have to read... sit and read through your Slack and emails anymore. Just set up an automation which basically

[02:47:41] - [02:47:50]

Uthappa Outskill: absorbs, like, Codex is going to absorb it and push it into this task tracker. So basically, this is the system that is under development, and this is powered with the help of MCPs at this point of time.

[02:47:51] - [02:48:04]

Uthappa Outskill: Right? It becomes a working system that you can work with, and this... an understanding is something that took me around 12 months to build with. It took a lot of building, rebuilding, and endless nights that came out as learnings.

[02:48:04] - [02:48:07]

Uthappa Outskill: Now, the reason I'm pointing this out is this doesn't happen overnight.

[02:48:08] - [02:48:21]

Uthappa Outskill: And it is also not a template that everybody can use. It changes from person to person. It also takes around 6 to 12 months to get to a point where you finally are able to, work with AI like a partner when you're figuring it out on your own.

[02:48:22] - [02:48:25]

Uthappa Outskill: Right? When you're figuring it on your own, this is the path that you would have to take.

[02:48:25] - [02:48:34]

Uthappa Outskill: So while this is more of an individual use case, let's also explore what's happening at the companies, or how should you approach implementation at companies at this point.

[02:48:35] - [02:48:37]

Uthappa Outskill: Cool, with me so far?

[02:48:44] - [02:48:54]

Uthappa Outskill: Where does one start? One has to start from... pick one workflow. Like Akshat mentioned, pick one workflow on a daily basis that you do in a repeated manner. It can be as simple as your email.

[02:48:54] - [02:48:56]

Uthappa Outskill: Start with your email.

[02:48:57] - [02:49:02]

Uthappa Outskill: Right? Figure out a way how you can automate your email sorting. That's all.

[02:49:02] - [02:49:04]

Uthappa Outskill: Okay, enough.

[02:49:05] - [02:49:20]

Uthappa Outskill: Reid Hoffman made a point recently that most enterprise AI strategies actually plan backwards. Companies basically go about appointing a chief AI officer, and then they announce some pilot programs, and then run a showcase of it.

[02:49:20] - [02:49:25]

Uthappa Outskill: But the real value is sitting in the boring work where the organizations are quietly

[02:49:25] - [02:49:35]

Uthappa Outskill: bleeding time with, right? Because you will not find a press release from an organization saying that about where they were able to automate a 40-hour weekly report.

[02:49:35] - [02:49:51]

Uthappa Outskill: and bring it down to around 20, what, 20 minutes, right? That's not going to be the release. But when 50 people in that organization, each of them take back 4 hours, that is what compounds, and the company builds a memory of what AI is actually good for.

[02:49:51] - [02:49:56]

Uthappa Outskill: Now, that memory is an asset. The pilot program that they launched, without looking into this.

[02:49:56] - [02:49:59]

Uthappa Outskill: The other backwards is not

[02:50:00] - [02:50:01]

Uthappa Outskill: The asset that they're looking for.

[02:50:02] - [02:50:04]

Uthappa Outskill: Right? And...

[02:50:05] - [02:50:20]

Uthappa Outskill: Since we do a lot of B2B work, we sit with these companies across aviation, FMCG, taxation, and real estate, and all these companies. One leader told us he wanted everyone using AI in his organization. So we went ahead, asked him what he had done so far for that.

[02:50:21] - [02:50:27]

Uthappa Outskill: He said he brought... his team brought, cloud subscriptions for the whole team in his organization, but nobody's using it right now.

[02:50:28] - [02:50:30]

Uthappa Outskill: So we went deeper to understand what was it.

[02:50:31] - [02:50:40]

Uthappa Outskill: While the company runs on Outlook, and IT had... by the same time, IT was supposed to make this happen, the IT team did not clear Outlook to connect to Cloud.

[02:50:41] - [02:50:57]

Uthappa Outskill: So the tool could not touch a single piece of real work that existed. So everybody had a license, and nobody had a use case. So, now, some of you might be part of a similar structure like this in your companies, right? Your IT might not approve the connector this quarter, but

[02:50:58] - [02:51:00]

Uthappa Outskill: That does not mean you stop learning.

[02:51:00] - [02:51:09]

Uthappa Outskill: Right? Because the approval, at some point, will come. And when that day comes, either you know what to do with it, or you're starting completely from the scratch.

[02:51:10] - [02:51:16]

Uthappa Outskill: So, learn now, irrespective of what status is right now, learn now, build the skills, and connect later.

[02:51:17] - [02:51:20]

Uthappa Outskill: So, every B2B client we meet asks us the same question.

[02:51:21] - [02:51:27]

Uthappa Outskill: How do we find our AI champion within our own organization? How do we create such AI champions? They all want them.

[02:51:27] - [02:51:34]

Uthappa Outskill: But almost none of them actually know how to spot one. So the answer is, honestly, After 5 days.

[02:51:35] - [02:51:42]

Uthappa Outskill: I'm gonna ask you, is what you know right now more than 90% of the people sitting around your... around you at your work? Let me know.

[02:51:43] - [02:51:45]

Uthappa Outskill: Yes or no in the chat?

[02:51:49] - [02:51:53]

Uthappa Outskill: Right? Most of you are agreeing to it, right?

[02:51:53] - [02:51:57]

Uthappa Outskill: That gap is your advantage. That is also

[02:51:57] - [02:51:59]

Uthappa Outskill: And that gap also has a shelf life.

[02:51:59] - [02:52:06]

Uthappa Outskill: Spend it on one workflow at your job, do not look for perfection, just get started with one workflow at your job this week.

[02:52:07] - [02:52:21]

Uthappa Outskill: Right? Watching more content will not help after a point, so you'll have to start executing it. So work on one workflow. In the next 3-4 days, figure out that one workflow you want to get started off with. It can be as simple as, as I said.

[02:52:21] - [02:52:30]

Uthappa Outskill: connect Gmail connectors to your cloud or Codex, and start with that workflow on a daily basis to summarize it, and taking actions on top of it.

[02:52:31] - [02:52:32]

Uthappa Outskill: Okay?

[02:52:32] - [02:52:42]

Uthappa Outskill: Another question people ask, is whether AI takes jobs. So, I used to think it would, so I once was able to ask Vaibav the same question.

[02:52:42] - [02:52:44]

Uthappa Outskill: The same exact question, and he said he doesn't know.

[02:52:45] - [02:52:46]

Uthappa Outskill: He also doesn't know.

[02:52:46] - [02:52:56]

Uthappa Outskill: And that's the reassurance I got, right? Because here, what is actually, here's what actually shown up in one of the research that happened. I'll see if I can give you some references on this later on.

[02:52:56] - [02:53:10]

Uthappa Outskill: So, two Berkeley researchers followed a 40 people at a 200% tech team for... tech team in a tech company for about 8 months, and published it in a Harvard Business Review earlier this year.

[02:53:11] - [02:53:14]

Uthappa Outskill: Now, in this company, nobody mandated to use AI.

[02:53:14] - [02:53:16]

Uthappa Outskill: People adopted it themselves.

[02:53:16] - [02:53:18]

Uthappa Outskill: Right? But what happened?

[02:53:19] - [02:53:30]

Uthappa Outskill: Ideally, when we say... when we talk about AI adoption, we are thinking of more free time that is available for us to execute, or spend somewhere else. But what happened was not free afternoons.

[02:53:30] - [02:53:33]

Uthappa Outskill: When they themselves adopted, but still, there were no free afternoons for them.

[02:53:34] - [02:53:39]

Uthappa Outskill: They worked faster enough, took a wider scope, and pushed more work into those free hours.

[02:53:39] - [02:53:47]

Uthappa Outskill: So, engineers ended up reviewing the junior developer's code, coaching them, and finishing other people's half-term projects at this point. So, the easy...

[02:53:48] - [02:53:57]

Uthappa Outskill: stretches that used to sit between hard tasks kind of disappeared. The result was more of cognitive strain and burnout, not more rest.

[02:53:58] - [02:54:00]

Uthappa Outskill: That's the reality. So here's my advice.

[02:54:01] - [02:54:03]

Uthappa Outskill: 2 or 3 tasks a week.

[02:54:03] - [02:54:04]

Uthappa Outskill: Do them without

[02:54:05] - [02:54:10]

Uthappa Outskill: AI at this point of time, even though AI can do that for you. Example, writing the email yourself.

[02:54:11] - [02:54:23]

Uthappa Outskill: doing the analysis yourself. You're keeping a skill alive by doing this that you will need on the day that the output looks very confident, but at the same time is very rock, right? So despite AI can do a couple of things.

[02:54:23] - [02:54:36]

Uthappa Outskill: Just to make sure that you don't get into that zone of burnout or cognitive strain, try doing it yourself, wherever possible. Very small, tiny workflows of your whole workflow. Maybe of 90%, just keep 10% for yourself.

[02:54:38] - [02:54:50]

Uthappa Outskill: Now, talking about ambition, anyone telling you they are using AI to cut costs right now is going to get beaten up by the company next door, using it to serve customers better and take more business.

[02:54:51] - [02:54:55]

Uthappa Outskill: I'll give you an example for this. Run the arithmetic on your own team.

[02:54:55] - [02:54:57]

Uthappa Outskill: If 10 people used to bring

[02:54:57] - [02:55:07]

Uthappa Outskill: In one crore, so, I'm sorry, my conversion rates are not great, but I would say it is roughly around 100K, if I'm not wrong. 1 crore Indian rupees should be around.

[02:55:07] - [02:55:12]

Uthappa Outskill: 100K US dollars, so apologies if my conversion is bad. Okay?

[02:55:12] - [02:55:19]

Uthappa Outskill: So, the move is not to do the same 1 crore or 100K US dollars with 5 people.

[02:55:19] - [02:55:22]

Uthappa Outskill: The move is not to reduce the number of people and do the same amount.

[02:55:23] - [02:55:28]

Uthappa Outskill: The move to go after is make 5 to 10 crore, or

[02:55:29] - [02:55:33]

Uthappa Outskill: Maybe approximately a million dollars, by hiring more.

[02:55:33] - [02:55:40]

Uthappa Outskill: Because then the ambition is going up, and that is where hiring is happening right now, and we at Outskill are exactly in the same position right now.

[02:55:40] - [02:55:49]

Uthappa Outskill: We are hiring at Outskill for exactly the same reason, because AI has enabled us to think more. So for that, we are adding more people and multiplying

[02:55:49] - [02:56:00]

Uthappa Outskill: the revenue that comes in, or the outcome that we can extract from the help of AI right now, right? So, you will learn more about it over the weekend when Vaibav is here, and he'll give you more perspective around it.

[02:56:01] - [02:56:03]

Uthappa Outskill: So, what does it mean for you?

[02:56:03] - [02:56:06]

Uthappa Outskill: Across this program, you will see people who look far ahead of you.

[02:56:07] - [02:56:18]

Uthappa Outskill: Do not read that as I have... basically, I've started too late. That should not be the indication. Look at the actual distribution. In your office, in your family, in your friend circle, you're already at the front.

[02:56:19] - [02:56:21]

Uthappa Outskill: Right? That is the base you build on.

[02:56:21] - [02:56:34]

Uthappa Outskill: The question for the rest of the week is, how deep you go from where you are already... at this point, where you are positioned, and from here, how deep earth can you go into all of these kills? That should be the question that you target.

[02:56:34] - [02:56:41]

Uthappa Outskill: Right? So while building, make sure focus is on building for the 90%, as I told you earlier.

[02:56:41] - [02:56:45]

Uthappa Outskill: One company asked us for a fully automated invoice workflow, but

[02:56:45] - [02:56:50]

Uthappa Outskill: Basically, according to them, invoice has to be generated, sent, no human involved.

[02:56:50] - [02:57:01]

Uthappa Outskill: We kind of disagreed with it, wherein we wanted to build it right up to the point where a draft is sitting in your outbox, right? After that, a person has to check three things. Is the tone right?

[02:57:01] - [02:57:08]

Uthappa Outskill: is the amount matching for the client? And is the attached invoice the correct one? Then you click send.

[02:57:09] - [02:57:12]

Uthappa Outskill: Right? So you will see posts where people are saying my agent

[02:57:13] - [02:57:19]

Uthappa Outskill: I mean, it was chasing the invoices while I was sleeping and all of those stuff, but that is content, folks. That's not operations.

[02:57:19] - [02:57:27]

Uthappa Outskill: Right? Automate up to 90%. Anything that touches a client, a payment, or a person's record, keep a human on the last tip.

[02:57:27] - [02:57:41]

Uthappa Outskill: basically foolproof your AI implementation. Some of the reason your AI implementations fail is because you kind of automate everything without any room for human intervention, and then once the errors keep piling up.

[02:57:41] - [02:57:47]

Uthappa Outskill: nobody has patience to kind of go back and redo the whole thing. That's where your implementation stops.

[02:57:47] - [02:57:59]

Uthappa Outskill: Right? To give you another context, Fifi, I hope I'm pronouncing that right, was one of... was on the Huberman Lab podcast recently. I'll give you a link in the chat if you can go through it.

[02:58:04] - [02:58:06]

Uthappa Outskill: I'm putting it in the chat, you can go through it.

[02:58:08] - [02:58:08]

Uthappa Outskill: Okay?

[02:58:09] - [02:58:15]

Uthappa Outskill: So, she is the researcher behind ImageNet, one of the people modern AI is actually built on.

[02:58:15] - [02:58:26]

Uthappa Outskill: The point that stayed with us was, start with the problem, not the tool. As we keep saying, start with the workflow, start with figuring out your problem statement, build a workflow around it, tool keeps changing.

[02:58:26] - [02:58:35]

Uthappa Outskill: Stop chasing whether Claude... somebody asked me earlier in the chat as well. The same thing can be done on Claude, same thing can be done on Codex. Yes, it can do.

[02:58:36] - [02:58:39]

Uthappa Outskill: So you need to stop asking whether Claude beats Codex this month.

[02:58:39] - [02:58:40]

Uthappa Outskill: Both will solve your problem.

[02:58:41] - [02:58:54]

Uthappa Outskill: But you can pick one. Whatever resonates best with you, the UX, or whatever the response resonates best with you, pick one, solve it, and then if you're still wanting to compare, you can go ahead and, if you care, to see which one works better, you can compare it later.

[02:58:54] - [02:58:56]

Uthappa Outskill: That should not be the starting point for you.

[02:58:57] - [02:59:01]

Uthappa Outskill: Okay? Then, expand your options with the help of AI.

[02:59:02] - [02:59:17]

Uthappa Outskill: You keep the decision, but expand the options with AI. So use AI to widen what you're choosing between. Ask it, for maybe competing hypothesis. Three strategies you did not consider. Maybe strongest argument against

[02:59:17] - [02:59:24]

Uthappa Outskill: Your plan, the edge cases, your blind spots. Squeeze it dry on the amount of options it can give you, but the decision stays with you.

[02:59:25] - [02:59:29]

Uthappa Outskill: Somebody asked me whether an AI agent could decide which people to retain and which one to let go.

[02:59:30] - [02:59:31]

Uthappa Outskill: Right?

[02:59:31] - [02:59:37]

Uthappa Outskill: But up to a point, yes, you can use it, but... Pull the messages.

[02:59:37] - [02:59:53]

Uthappa Outskill: and the work history, build a picture of the person, get a fair recap of the entire last year. Like, the system I showed you earlier that I was able to build, it has context about the team I'm working with, it is context about our performance, it is context about my own goals, right? It is going to evolve with time.

[02:59:53] - [02:59:57]

Uthappa Outskill: That is fine, but when the decision is made, it has to be your decision.

[02:59:57] - [03:00:01]

Uthappa Outskill: Nobody gets to say the agent decided which person to go.

[03:00:02] - [03:00:07]

Uthappa Outskill: It can give you context, but you take the decision. We should have that decency to own that part, at least.

[03:00:08] - [03:00:19]

Uthappa Outskill: Okay? So, keep experimenting in odd directions. I read about somebody who spent around 10 minutes every morning for 3 months just talking to AI about their day.

[03:00:20] - [03:00:35]

Uthappa Outskill: 3 months in, the answers got sharper, because the thing had 3 months of context to draw on. The same thing goes back to the system I showed you at the beginning, right? Because so much of your own thoughts is going to be, input into these

[03:00:36] - [03:00:47]

Uthappa Outskill: files that you have given it access to, and you keep talking to AI, it has its own inbuilt memory as well at this point of time, right? Three months of context to draw upon. Now.

[03:00:47] - [03:00:54]

Uthappa Outskill: the answers got a little more sharper, because it had that much of a context. So nobody designed that use case, they found it.

[03:00:54] - [03:00:58]

Uthappa Outskill: So you will also have to figure out what is that workflow that you want to work with.

[03:00:58] - [03:01:02]

Uthappa Outskill: But there is a line, folks. Do not use AI

[03:01:02] - [03:01:05]

Uthappa Outskill: The way a drunk uses a streetlight.

[03:01:06] - [03:01:08]

Uthappa Outskill: You should not use it for support.

[03:01:09] - [03:01:11]

Uthappa Outskill: Instead, use it for light.

[03:01:12] - [03:01:16]

Uthappa Outskill: Right? So, point it at the parts you cannot see.

[03:01:17] - [03:01:20]

Uthappa Outskill: I hope that line makes sense.

[03:01:21] - [03:01:23]

Uthappa Outskill: In case it offended anyone, I'm sorry.

[03:01:24] - [03:01:25]

Uthappa Outskill: Okay.

[03:01:26] - [03:01:44]

Uthappa Outskill: So, finally, I also went through a paper, I think you can just research this on Perplexity, a perplexity or Google search, you can just figure this out. So, this is one of the papers that was written, and I told you there's a computer error as well. The similar error is what we are kind of traversing right now.

[03:01:44] - [03:02:01]

Uthappa Outskill: So, this paper by Paul David called The Dynamo and the Computer, just Google search it or publicity search it, you should be able to get a file around it. So, this is around how factories got electrified, the stage where factories got electrified back, in the day. And for roughly 40 years.

[03:02:01] - [03:02:05]

Uthappa Outskill: The productivity numbers did not move at all after electricity was brought in.

[03:02:05] - [03:02:07]

Uthappa Outskill: In these factories, right?

[03:02:08] - [03:02:12]

Uthappa Outskill: So, the electricity cost was more than the steam, and it delivered less.

[03:02:13] - [03:02:26]

Uthappa Outskill: The reason was that the factories had the same layout. It had the same steam layout. One giant central engine had shafts and belts running power to every mission, and they had swapped... just swapped the engine and kept the building as it is.

[03:02:28] - [03:02:42]

Uthappa Outskill: So the gains came only when later somebody redesigned the whole factory. They put a small motor on each of the machines, then you could now lay out the floor around that work instead of around a driveshaft, and that number finally started moving.

[03:02:43] - [03:02:50]

Uthappa Outskill: Currently, when it comes to AI, we are at a similar stage. We are at that shaft and belt stage with AI, so most people ask.

[03:02:50] - [03:02:53]

Uthappa Outskill: Here is my existing process, where do I insert AI?

[03:02:53] - [03:03:00]

Uthappa Outskill: The better question is, now that I have this, what work is worth doing that was not worth doing before?

[03:03:01] - [03:03:04]

Uthappa Outskill: Right? And that is a question

[03:03:04] - [03:03:17]

Uthappa Outskill: We want to solve during these 14 days by giving you more context around these workflows, but at the same days, same time, Vaibhu is also going to take up further on this particular context and this particular threat on Sunday, when it's going to come up for our session.

[03:03:19] - [03:03:26]

Uthappa Outskill: Okay? So Sunday, Vaibh Janssens to connect everything that you've learned till this week, and show you how to go deeper into it.

[03:03:28] - [03:03:32]

Uthappa Outskill: He's moving... he's actually driving to US for MetaConnect next week.

[03:03:32] - [03:03:41]

Uthappa Outskill: Yeah, immediately after your session is done, IST-UST session is done, he will have to move to US for MetaConnect. And, so, we thought.

[03:03:44] - [03:04:05]

Uthappa Outskill: we ask him to make some time before he can ship... I mean, he can move to US, he can also talk to you. And, Sunday's going to be a little intense, folks, because he's going to be here generally, he keeps on sharing a lot of information. So keep your food ready if possible, treat it as a working lunch whenever possible, but it is going to be a jam-packed day on Sunday. The last thing I will stop with is

[03:04:05] - [03:04:08]

Uthappa Outskill: If you like what you've seen. Okay, but before that.

[03:04:09] - [03:04:14]

Uthappa Outskill: Did you get a context of everything that I was able to, communicate so far? Are you able to connect those dots?

[03:04:20] - [03:04:21]

Uthappa Outskill: Perfect.

[03:05:02] - [03:05:10]

Uthappa Outskill: Beyond that, finally, start implementing it. Do not wait for your 14 days to be completed, start with one workflow.

[03:05:11] - [03:05:22]

Uthappa Outskill: one workflow that is going to be a needle mover for you at your workplace in the next 3-4 days plan, it can be with MCPs itself, right? That is the only thing that'll matter by next week.

[03:05:23] - [03:05:39]

Uthappa Outskill: Cool. So, that was a bit of context I wanted to provide on how do you go about implementing it, what are the next steps. Now, before I go for a break, I also wanted to quickly bring in the timings for Sunday's session, because I had promised you

[03:05:41] - [03:05:43]

Uthappa Outskill: To explain a bit on the timing side.

[03:06:08] - [03:06:12]

Uthappa Outskill: Okay? So...

[03:06:12] - [03:06:21]

Uthappa Outskill: The timings is going to be... there are two batches going to run for the weekend. One is as per the ISD time zone, and one is as per the EDT time zone.

[03:06:21] - [03:06:28]

Uthappa Outskill: On your LMS, you should already have been part of something called as C14IST or C14EST.

[03:06:29] - [03:06:31]

Uthappa Outskill: Do you guys know at least this much?

[03:06:32] - [03:06:35]

Uthappa Outskill: Which are you part of? C14 IST or C14EST?

[03:06:43] - [03:06:46]

Uthappa Outskill: Got it. If you know this, then it's simple.

[03:06:46] - [03:06:53]

Uthappa Outskill: If you're part of C14 ISD, your sessions will start at... a team, you can also drop in the timings in the chat once.

[03:06:55] - [03:07:03]

Uthappa Outskill: If you're part of C14 IST, then your session starts at 10 AM Indian Standard Time on Sunday. It'll go up till 7pm Indian Standard Time.

[03:07:04] - [03:07:10]

Uthappa Outskill: If you're part of C14EST, then your session starts on 10 AM EDT.

[03:07:11] - [03:07:15]

Uthappa Outskill: And it goes up to 7pm EDT. This is for Saturday as well as Sunday.

[03:07:16] - [03:07:20]

Uthappa Outskill: Right? I hope this is clear, because the reason I'm bringing this up is in case.

[03:07:22] - [03:07:38]

Uthappa Outskill: you are from, let's say, countries like UK and US, probably even Australia, all these different time zones where, if you're part of C14 IST Space Group, and if the timings as per IST is not suitable for you, then you can opt for a switch into the

[03:07:38] - [03:07:45]

Uthappa Outskill: The second batch that I was talking about is C14EDD, so that the timings is more suitable for you to join.

[03:07:45] - [03:08:03]

Uthappa Outskill: We had already given this option for you before the cohort started to make that switch if required, but I'm going to give you one last... I know it is a very last minute for us also to execute it operationally, but still, just to make sure that nobody is missing out on these weekend sessions, we are going to drop a form in the chat for one last time, so that...

[03:08:03] - [03:08:09]

Uthappa Outskill: You can go fill it, whoever wants to switch. If you do not want a switch, stay where you are right now, don't have to do anything.

[03:08:09] - [03:08:17]

Uthappa Outskill: If you want to switch, go ahead, fill the form. We will take the next couple of hours to make that shift happen, and your timings will get updated.

[03:08:22] - [03:08:26]

Uthappa Outskill: Do you guys sleep enough? We try as much as possible, folks. Thanks, Jens, for asking.

[03:08:29] - [03:08:32]

Uthappa Outskill: how to know which shift we are. You basically have to,

[03:08:33] - [03:08:34]

Uthappa Outskill: Let me just show it blue.

[03:08:35] - [03:08:42]

Uthappa Outskill: I know I'm taking your time, but just give me... allow me one minute, so that tomorrow I don't have to deal with the...

[03:08:42] - [03:08:44]

Uthappa Outskill: session-related issues.

[03:08:56] - [03:08:57]

Uthappa Outskill: Yeah.

[03:08:58] - [03:09:07]

Uthappa Outskill: How do you know? You'll know by the name which shift are you part of? C14IST is the first shift that we, Shasti can drop the link again in the chat.

[03:09:07] - [03:09:09]

Uthappa Outskill: Sorry, the timing's again in the chat.

[03:09:10] - [03:09:24]

Uthappa Outskill: you'll know if you're part of the second shift, if you are in C14EST. You can also check for the live sessions tab, your calendar is already blocked, your live sessions tab already has the timings that you should be joining, as per your respective, it'll show as per your respective time zones.

[03:09:25] - [03:09:26]

Uthappa Outskill: Cool.

[03:09:29] - [03:09:44]

Uthappa Outskill: Alright, so I hope to see all of you in the weekend session that's going to be completing the Phase 1 of a learning. I want you to give, we'll take a 5 minutes break, if you don't mind, because we have a workbook coming in. We'll take a 5 minutes break.

[03:09:45] - [03:09:51]

Uthappa Outskill: Thanks for asking. There is no office hours tomorrow? Yes, there is no office hours over the weekend, because you'll be occupied with the session full day. There's no office hours.

[03:09:55] - [03:09:56]

Uthappa Outskill: Okay?

[03:09:57] - [03:09:59]

Uthappa Outskill: If you have any questions further.

[03:09:59] - [03:10:03]

Uthappa Outskill: You can also write to us at support at the rate, Outskill.com.

[03:10:03] - [03:10:06]

Uthappa Outskill: And our team will be able to help you out.

[03:10:08] - [03:10:18]

Uthappa Outskill: We'll take 5 minutes, I'm sorry, but I took some additional 5 minutes in explaining this stuff, but we'll take 5 minutes, come back, and then I will explain the workbook for you.

[03:10:21] - [03:10:27]

Uthappa Outskill: Okay, let's do it in between. Let's take 7 minutes, folks. Let's take 7 minutes, come back.

[03:10:27] - [03:10:32]

Uthappa Outskill: And then we will, I'll show you... I'll talk about the workbook.

[03:18:01] - [03:18:02]

Uthappa Outskill: Alright.

[03:18:03] - [03:18:07]

Uthappa Outskill: I'll keep this part, short so that you can quickly get to the breakout rooms.

[03:18:08] - [03:18:17]

Uthappa Outskill: Just answering a couple of questions in the chat. One, how was I able to create the infograph of the system that I showed? Claude had the context of,

[03:18:17] - [03:18:25]

Uthappa Outskill: what the system was, added some additional information, so it gave a prompt, because CloudKat cannot generate images without any MCPs.

[03:18:25] - [03:18:34]

Uthappa Outskill: So, it gave a prompt, and then I had put it into ChatGPT to create that visualization. Second thing around Codex, yes, we covered a

[03:18:34] - [03:18:38]

Uthappa Outskill: a bit of around Codex and MCP workflows today. We'll also be covering a lot more around

[03:18:38] - [03:18:54]

Uthappa Outskill: when Dilip comes next week, that is around Tuesday, roughly around Tuesday, so we're gonna have a session around open source models, and where we harness some of those using Codex and build more workflows around it. So you'll learn a little more around Codex in the coming week.

[03:18:55] - [03:19:05]

Uthappa Outskill: Third, also, around... ideally, Dilip was supposed to take today's session and why he was not available, so, unfortunately, for the last 3 days, he has been super sick.

[03:19:05] - [03:19:20]

Uthappa Outskill: So, last minute, we had, I mean, he was not able to take up the session for the day, so hence, Akshat helped us out with the session for the day, but thanks to him for executing it. So, Dilip will be back in the coming week for another session around this.

[03:19:28] - [03:19:33]

Uthappa Outskill: Okay, now quickly talking about, the workbook.

[03:19:34] - [03:19:49]

Uthappa Outskill: I'm not going to go deeper into this workbook, because you're going to solve this anyways, but at the end of the day, this is how your output should look like. So you will build a email MCP server, not that it doesn't exist, but you will know how to build a simple email MCP server.

[03:19:49] - [03:20:00]

Uthappa Outskill: You can also do it later on with the same knowledge with any of the other tools that you want. One of the ways I would probably build this up in the future when I want to redo this whole thing is basically,

[03:20:00] - [03:20:09]

Uthappa Outskill: See, any... whether you go to Cloud or Chat JPT right now, if you're connecting a Gmail connector, you can only connect it or configure it with one email ID.

[03:20:10] - [03:20:13]

Uthappa Outskill: I have 5 active email IDs right now.

[03:20:13] - [03:20:21]

Uthappa Outskill: So for me, to read emails from all of those 5 different email IDs is going to be difficult. So probably I'll configure this MCP server to...

[03:20:21] - [03:20:32]

Uthappa Outskill: I mean, read emails for... from 5 different email IDs, that's how I would probably configure it, which would make my job a little easier. Grokbot allows that today, but if...

[03:20:32] - [03:20:34]

Uthappa Outskill: You do not want to...

[03:20:34] - [03:20:41]

Uthappa Outskill: do the Grokbot way, and you have another way of doing it, this can be one of the use cases that you can explore.

[03:20:43] - [03:20:44]

Uthappa Outskill: Cool,

[03:20:45] - [03:20:49]

Uthappa Outskill: That is a workbook that you learned today on how to build. We will take about, what.

[03:20:50] - [03:20:52]

Uthappa Outskill: 1.5 hours to make this happen.

[03:20:54] - [03:20:54]

Uthappa Outskill: Cool.

[03:20:58] - [03:21:16]

Uthappa Outskill: Alright, so any further questions around the timings? Check your calendar, check your LMS, you will see what time you're supposed to join. You might, if you still have any further questions, drop an email to support at the [rateoutskill.com](mailto:support@rateoutskill.com) right now, and we can get that checked in the next couple of hours, so that

[03:21:16] - [03:21:19]

Uthappa Outskill: You don't have issues tomorrow.

[03:21:19] - [03:21:26]

Uthappa Outskill: Okay? So, team, with that context, I think we can... Start the breakout rooms.

[03:21:29] - [03:21:33]

Uthappa Outskill: Any confirmation email will be received, just refresh your dashboard after, maybe.

[03:21:34] - [03:21:38]

Uthappa Outskill: Two to three hours, and your access should be changed

[03:21:38] - [03:21:48]

Uthappa Outskill: For whatever it is. I'm probably... and this is something that you cannot come back on Monday and ask me to change it back to ISD or EST folks. Whatever we're doing right now will stay for the remainder of the two weeks.

[03:21:50] - [03:21:56]

Uthappa Outskill: Okay, team, we are ready. Whenever you're in, you're good with it, we can start with the breakout rooms.

[04:57:20] - [04:57:37]

Shasti: Hey folks, whoever is back in the main room, I hope you guys were able to solve the workbook and, build your first ever MCP server in the breakout rooms. I'm gonna quickly drop the reflection link and the breakout room feedback form in the chat. Go ahead and

[04:57:38] - [04:57:40]

Shasti: Drop your feedback if you have not yet done.

[04:57:41] - [04:57:43]

Shasti: And then you can drop off.

[04:57:50] - [04:57:51]

Shasti: Yeah.

[04:57:51] - [04:58:08]

Shasti: There you go. You have your DayFi Reflection badge, and also the, feedback form for the breakout rooms. Go ahead, generate your badges, fill the feedback form, and let us know how this activity was on LMS, on the Gratitude channel, as Uthappa also mentioned.

[04:58:08] - [04:58:23]

Shasti: that I do not see... we do not see any of you interacting or sharing your gratitude on the LMS space. So if you do have time, take a minute or so, reflect back upon what you learned today and how was the experience.

[04:58:23] - [04:58:27]

Shasti: And that's when even we'll get to know if you look into the LMS as well.

[04:58:27] - [04:58:39]

Shasti: And if you're done with everything, go ahead and drop off. Again, a quick heads up, tomorrow and day after are going to be our two, intense two days that we are going to have, because sessions are starting from

[04:58:39] - [04:58:51]

Shasti: 10 a.m. and ending at 7pm. For IST time zone, it is in IST, and for non-IST, it is in EDT time zone. So make sure that you are getting good amount of rest.

[04:58:51] - [04:58:52]

Shasti: Today.

[04:58:54] - [04:59:02]

Shasti: Asking doubts, yes, go ahead and post it on your Ask Doubt channel, and the mentor will be able to look into it and get back to you in the next 24 hours.

[04:59:08] - [04:59:27]

Shasti: Tomorrow's timing is, if you are part of C14 IST space on LMS, the timings are 10am IST to 7pm IST. If you are part of C14EST on LMS, timings are 10am EDT to 7pm EDT, and I'll leave it up to you guys to convert it into your time zone.

[04:59:29] - [04:59:32]

Shasti: We have already shared the workbook link.

[04:59:33] - [04:59:38]

Shasti: Team, we can also... The one on the resources is a different one.

[04:59:39] - [04:59:41]

Shasti: That should not be the case.

[04:59:42] - [04:59:48]

Shasti: Click on the workbook section on your, Dayify on your LMS. You will find today's workbook.

[04:59:48] - [04:59:59]

Shasti: And if you're seeing an additional workbook on resources section, that is the additional workbook we would want you to go ahead and explore once the session is done. That is not something that we solved in the breakout rooms.

[05:00:13] - [05:00:16]

Shasti: How do we get to complete the workbook?

[05:00:16] - [05:00:35]

Shasti: With mentor support. If you were not able to complete the workbook in the breakout rooms, then what you can do is try solving on your own, and any doubts you have, put it on the Ask Doubt channel with a screenshot if you can. Then the mentor who's looking into that channel will be replying to you over there in the same thread with the solution.

[05:00:35] - [05:00:39]

Shasti: This is a... you can get support from the mentor if you're solving the workbook later.

[05:00:46] - [05:00:47]

Shasti: Pour...

[05:00:47] - [05:01:07]

Shasti: Those of you who are mentioning that you guys are done with the workbook, yes, folks, please do go ahead and drop off. Tomorrow, we will start at 10am IST if you are part of IST. If not, 10 a.m. EDT if you are part of non-IST time zone. So go ahead and rest up. We'll see you guys tomorrow. I'll wait for other rooms to come back to the main room.

[05:01:11] - [05:01:15]

Shasti: Veinu, yes, feedback noted. We will ask the team to look into it.

[05:01:17] - [05:01:27]

Shasti: Mine is C14EST. Folks, on your LMS, depending on which time zone you're in, your system will be in that particular time zone.

[05:01:27] - [05:01:42]

Shasti: So, the only two slots that we have for tomorrow and day after is one which starts at 10am IST, and the other one which starts at 10am EDT. So, depending on whichever time zone you are in, LMS will show that particular timings in your time zone.

[05:01:42] - [05:01:54]

Shasti: So, if you are comfortable joining that, go ahead and join. If you are not comfortable, we have already dropped a form long back on our day one, and also, before we got into the breakout rooms, we did drop a form for you to fill.

[05:01:55] - [05:01:58]

Shasti: to either swap from 10am IST to 10am EST.

[05:02:07] - [05:02:28]

Shasti: The API keys that were provided in the breakout rooms yesterday or in the workbooks have been revoked, as mentioned yesterday, but if you would want to create, you can go ahead and create your own API key using Gemini, or you can also add a \$5 subscription on your OpenAI account on ChatGPT and get OpenAI API keys as well.

[05:02:32] - [05:02:36]

Shasti: Let me drop the feedback form and reflection for those of you who are asking.

[05:02:43] - [05:03:07]

Shasti: So, Neil, yes, the bonus tools that you have got, we do not want to restrict ourselves or you to just learn those bonus tools that you have gotten access to. That is why we are trying to cover tools beyond the bonus tools that you have got access to, because then you will have much more clarity on what are the tools available out there, and how would you go ahead and choose which tool you would want to use for your workflow.

[05:03:07] - [05:03:28]

Shasti: And to answer your next question, how would you use that bonus tool that you have given access to? The content library that is part of your cohort, that you already have access to on your left-hand side of the screen. If you go ahead, you will see most of the tool deep dives over there, so you can go ahead and watch those recordings to know how you can make use of the bonus tools as well.

[05:03:30] - [05:03:31]

Shasti: I hope that answers your question.

[05:03:33] - [05:03:36]

Shasti: Yes, padmaja, that is fine.

[05:03:38] - [05:03:49]

Shasti: Folks, again, repeating for one last time, that tomorrow's timings, we only have two slots. I'm gonna drop that timings again in the feed, chat, just give me a second.

[05:03:53] - [05:03:58]

Shasti: Yeah, I've dropped it in the chat. These are the only two slots that are available, there for

[05:03:58] - [05:04:16]

Shasti: tomorrow's session. If your system is saying different timings, that's because you are in a different time zone. If you're comfortable attending that particular time zone session, do not do anything. If you're not, you'll have to fill a form. I'll also drop the form in the chat for one last time. Go ahead and fill it.

[05:04:20] - [05:04:26]

Shasti: There is no office hours, folks. The office hours were from day 3 to day 5 of your program, which was today.

[05:04:30] - [05:04:38]

Shasti: Yes, Partha, if you put it on the Asdo channel with whatever doubt you have, the Mehta will be able to get back to you in the next 24 hours in the same thread.

[05:04:40] - [05:04:53]

Shasti: Yes. Folks, Office Hours Recording is already, provided to you starting from day 3. So, go to your LMS, go to Day 3, you will see a space called Office Hours Recording. All you need to do is just click on it, you will...

[05:04:53] - [05:04:57]

Shasti: The officer's recording, and also the transcript.

[05:05:21] - [05:05:27]

Shasti: Rashid, we will talk about it maybe on Day 7 of your program, which is on Sunday.

[05:05:31] - [05:05:32]

Shasti: Yeah.

[05:05:32] - [05:05:40]

Shasti: With that, whoever is done, please do go ahead and drop off, because you're going to have a long day tomorrow, so get some good amount of rest.

[05:05:40] - [05:05:43]

Shasti: Yep, whoever is dropping off, we will see you tomorrow.

[05:05:46] - [05:05:48]

Shasti: Yes, Tracy, thank you so much.

[05:05:51] - [05:05:57]

Shasti: Nutan, could you drop your email ID in the same chat? I would be able to check.

[05:05:58] - [05:05:59]

Shasti: And see what's the issue.

[05:06:22] - [05:06:25]

Shasti: Nutan, give me a second, I'm checking this right now.

[05:06:57] - [05:07:01]

Shasti: Nutan, you do have access to, C14...

[05:07:03] - [05:07:10]

Shasti: EST, so that should not be a problem. Your sessions will start at, 10 a.m. EDT tomorrow.

[05:07:52] - [05:07:56]

Shasti: Yeah, whoever is dropping off, thank you so much, folks. We will see you guys tomorrow.

[05:24:10] - [05:24:17]

Shasti: Hey folks, whoever is done with the workbook, kudos to all of you for building your first ever MCP server.

[05:24:17] - [05:24:36]

Shasti: And you guys can go ahead and drop off, because you have a long day coming tomorrow. And whoever has faced issues, it is very common, and we completely understand it, right? Each system acts differently when we are trying to build our very first MCP server. So any issues that you have faced, go ahead and drop it in the ask.channel with the

[05:24:36] - [05:24:49]

Shasti: screenshot if you can, and the mentor will be replying to it with a solution in the next 24 hours. If not, you can take your time, do not have to do it right now, you can go ahead, watch the recording later, and do it as well.

[05:24:49] - [05:25:03]

Shasti: Even in the workbook, if you guys can see, there is a video attached in the top of the workbook, which is basically the name of the entire workbook. If you're solving it later, you can watch that as well, and do the workbook.

[05:25:03] - [05:25:05]

Shasti: Hope this helps.

[05:25:07] - [05:25:11]

Shasti: You can post a screenshot of your error on Ask Theo channel.

[05:30:36] - [05:30:36]

Ritesh Outskill: It is.

[05:30:40] - [05:30:53]

Shasti: Okay, everyone, we are back in the main room. How was it, folks? How many of you were able to build your first ever MCP server? And how many of you were successfully able to use your Gmail Assistant?

[05:30:53] - [05:30:55]

Shasti: Let me know in the chat.

[05:30:57] - [05:30:58]

Shasti: Done.

[05:31:00] - [05:31:02]

Shasti: Okay, unfortunately not.

[05:31:05] - [05:31:10]

Shasti: Okay, I see a couple of you saying and, couple of you saying couldn't.

[05:31:13] - [05:31:27]

Shasti: Folks, we get it. Creating your first-ever MCP server is not an easy task, so if you did encounter issues, it is completely normal and understandable, right? And, we have also,

[05:31:27] - [05:31:29]

Shasti: created,

[05:31:30] - [05:31:52]

Shasti: guide to help you guys troubleshoot. So, Harshith, one of the mentors in our breakout rooms, went ahead and created this troubleshooting guide for all of you. It will be added on your LMS, and also, I'm gonna drop it here in the chat. So, you can go ahead and use this troubleshooting guide to solve this workbook if you're not able to solve it inside the breakout rooms.

[05:31:53] - [05:31:55]

Shasti: I'm gonna drop it in the chat.

[05:31:55] - [05:31:58]

Shasti: Yes, so you should be seeing the, troubleshooting

[05:31:58] - [05:32:06]

Shasti: workbook or the guide in the chat, go ahead and make use of it. This will also be uploaded on your LMS as well, right?

[05:32:09] - [05:32:33]

Shasti: And again, as I said, it is very common for you to encounter issues when you're setting up your first ever MCP server, so do not worry about it. You have the support channels that you need to reach out to whenever you're facing issues, that is one, take a screenshot of the issue, or... and briefly explain the error that you are getting on the AskDout channel with a screenshot, and the mentor will revert back to you in the same thread in the next 24 hours.

[05:32:33] - [05:32:38]

Shasti: And remember, post on the Ardav channel, not any other channel.

[05:32:38] - [05:32:40]

Shasti: I hope we're clear about it.

[05:32:43] - [05:32:52]

Shasti: Great. Team, we can drop the reflection, batch link and also the feedback form link for one last time in the chat, and then we will be able to wrap up the session.

[05:33:10] - [05:33:21]

Shasti: Yes, there you go. You have the reflection link and also the breakout room feedback form. Go ahead and, give your feedback, and also generate your Day 5 batches. Where to post the questions?

[05:33:21] - [05:33:40]

Shasti: Ask Doubt channel, folks, today is day 5 of our program, so you should be knowing on where to post your questions about content. Ask Doubt channel, which is on your LMS, is where you need to post your content-related questions. Try to add screenshot of the error, which can help the mentor give you a better answer, right? That is what I meant.

[05:33:41] - [05:33:59]

Shasti: Perfect. With that, thank you so much, everybody, for joining in. Thank you so much, all the amazing commenters, for helping our learners in the breakout room. And we will be seeing you guys tomorrow at 10 a.m. IST, if you're joining the IST batch. If not, 10 a.m. EDT, if you're joining the EDT sessions.

[05:33:59] - [05:34:11]

Shasti: And we'll be learning how you can build your very first voice agents, and also get introduced to a topic called vip coding in tomorrow's session, so make sure you're joining live, because it's gonna be fun.

[05:34:11] - [05:34:18]

Shasti: And, yeah, where do we get the batches? The link is already shared by Sumedha in the chat. Go ahead and generate your batches.

[05:34:18] - [05:34:36]

Shasti: And yeah, with that, thank you so much, everyone, for joining in. Have a great night. Rest up, because we are going to have a very two intense, days tomorrow and day after, so you need to rest up as much as you can, and we'll see you guys tomorrow at 10am IST or EDT. Thank you so much.
