

MCP Connectors for Working Professionals

Gmail + Google Calendar + Notion

Connect Claude to three of your real work tools and end this session with a fully formatted Weekly Work Report saved directly to your Notion workspace — in a single conversation.
No code. No installs. 100% free plan.

What You Will Do

In this workbook, you will connect Claude's web interface to Gmail, Google Calendar, and Notion using MCP Connectors. You will practise single-tool prompts for each connector, then chain them together into a multi-step workflow that automatically reads your inbox, analyses your calendar, and saves a structured Weekly Work Report to Notion.

What You Will Achieve by the End

- Connect Gmail, Google Calendar, and Notion to Claude on the free plan.
- Run prompts that pull real data from each connector individually.
- Chain multiple prompts together without losing context between steps.
- Run the full 4-prompt Weekly Work Report pipeline end to end.
- Save a personal Prompt Library of ready-to-use prompts for your daily routine.

Before You Start: What You Need

Please set up the following before beginning Part 1.

1. A Claude.ai Account

1. Go to claude.ai and sign in or create a free account.
2. Click New Chat and keep the tab open.

2. A Google Account

1. Your regular Gmail account is all you need — this also gives you Google Calendar access.
2. Make sure you know your Google login credentials before starting.
3. Confirm you have at least a few emails and calendar events from the past week.

3. A Notion Account

1. Go to notion.so and sign in or create a free account (takes about 2 minutes).
2. Once inside, close the tab - Claude will handle the rest.

⚠ Note: Claude can draft emails but cannot send them. It can create and read Notion pages but cannot delete them. All connectors work on the free plan.

Part 1: Connect Your 3 Connectors

Follow these steps in order. Each connector takes about 2 minutes to set up.

Step 1.1 — Open the Connectors Panel

1. Open claude.ai in your browser and start a new chat.
2. At the bottom of the chat window, click the + icon to the left of the text input box.

3. In the small menu that appears, click Connectors.

4. The Connectors panel will open. Click Browse Connectors.

Step 1.2 — Connect Gmail

1. In the search bar inside the Connectors panel, type Gmail and press Enter.

2. Click on the Gmail connector card, then click Connect.

3. A pop-up will open. Sign in to your Google account and click Allow.

Select what **Claude for Gmail** can access

Cancel

Continue

4. Come back to Claude. Gmail should now appear as Connected.

Run this quick test to confirm the connection is working:

Prompt:

Show me my 3 most recent unread emails.

If Claude shows real emails from your inbox, the connection is working. Move on to Step 1.3.

Step 1.3 — Connect Google Calendar

1. In the Connectors panel, click Browse Connectors again.
2. Type Google Calendar in the search bar and press Enter.

- Click Connect and follow the same Google sign-in and Allow steps.

Select what **Claude for Google Calendar** can access

☒ Select all

	View events on all your calendars. Learn more	☒
	See and download any calendar you can access using your Google Calendar. Learn more	☒
	See, edit, share, and permanently delete all the calendars you can access using Google Calendar. Learn more	☒

Make sure you trust Claude for Google Calendar

Review Claude for Google Calendar's [Privacy Policy](#) and [Terms of Service](#) to understand how Claude for Google Calendar will process and protect your data.

[Cancel](#) [Continue](#)

- Google Calendar should now appear as Connected.

Run this quick test:

Prompt:

What events or meetings do I have today or tomorrow?

If Claude lists your actual calendar events, you are connected. Move on to Step 1.4.

Step 1.4 — Connect Notion

1. In the Connectors panel, click Browse Connectors again.
2. Type Notion in the search bar and press Enter.

3. Click Connect. You will be redirected to Notion's sign-in screen.

4. Select your main workspace and click Allow Access.
5. Come back to Claude. Notion should now appear as Connected.

Run this quick test:

Prompt:

Search my Notion workspace and tell me what pages are there.

If Claude lists pages from your Notion workspace, all 3 connectors are active and you are ready to begin the exercises.

Part 2: The Workflow

Now that all 3 connectors are active, run the following 3 prompts in order — all in the same chat window. Claude will carry the context from each step into the next, so do not start a new conversation between prompts.

⚠ Note: Keep all 3 connectors toggled ON throughout this workflow. If Claude asks for permission to access a tool, click Always Allow.

Step 2.1 — Read Your Inbox

Start by asking Claude to go through your Gmail from the past week and give you a clear, structured picture of what came in.

Prompt:

Search my Gmail for all emails from the last 7 days. Read through them and give me a structured summary organised into three categories:

- 1. Emails I missed or did not open — list the sender, subject, and date for each.*
- 2. Emails that require quick action from me — for each one, state what needs to be done and include any deadline mentioned.*
- 3. Everything else — give me a brief overview of what came in (newsletters, updates, FYIs, etc.).*

Present this clearly so I can immediately act on the most important items.

Read Claude's response. If anything looks incomplete or unclear, ask Claude to refine it before moving to the next step.

Step 2.2 — Check Your Calendar and Connect It to Your Emails

Now ask Claude to pull your meeting data from Google Calendar and cross-reference it with the emails it already read.

Prompt:

Now fetch all my meetings from Google Calendar — both from the past 7 days and the upcoming 7 days.

For the meetings I had last week: check if any relevant emails in my Gmail relate to those meetings. If yes, list those emails alongside the meeting they connect to, and note what was discussed or decided.

For the upcoming week: give me a clear summary of my meeting schedule — what meetings I have, when they are, who is attending if listed, and anything I should be aware of going in.

Read Claude's response. You now have a combined view of your past week's communication and your upcoming week's commitments.

Step 2.3 — Save Your Weekly Report to Notion

Finally, ask Claude to take everything it has gathered and write it into a clean, structured Notion page.

Prompt:

Using everything you have gathered — the email summary and the calendar data — create a new page in my Notion workspace titled 'Weekly Report — [insert today's date]'.

Structure it with two sections:

1. Last Week's Summary — key emails I missed, emails requiring action, and a brief on the meetings I had and any relevant email context from those meetings.

2. Upcoming Week's Plan — my full meeting schedule for the week ahead and any outstanding email actions I still need to complete.

Keep it clean and easy to read.

⚠ Note: After Claude finishes, open your Notion workspace and check that the page is there. It should be fully formatted and ready to use.

You're Done!

Here is what you accomplished in this session:

- You connected Gmail, Google Calendar, and Notion to Claude using MCP Connectors.
- Claude read your inbox and surfaced missed emails and action items — without you manually searching.
- Claude cross-referenced your meetings with your emails so you could see what was discussed and what is coming up.
- Claude wrote a structured Weekly Report directly into your Notion workspace.

All of this happened inside one Claude.ai conversation, using 3 prompts. That is what MCP Connectors make possible.

Quick Tips

- Keep all 3 prompts in the same chat — Claude carries context from each step into the next. Starting a new chat resets everything.
- Always name the connector in your prompt — say 'search my Gmail' or 'check my Google Calendar' so Claude knows which tool to activate.
- If Claude only uses one connector when you want both, name both explicitly: 'Using both Gmail and Google Calendar, tell me...'
- If Claude uses the wrong Google account, disconnect the connector, reconnect, and carefully select the correct account during sign-in.
- If you hit usage limits mid-workflow on the free plan, save Claude's last response somewhere, wait a few hours, then continue from the next prompt.
- If the Notion page looks empty or badly formatted, ask Claude to recreate it and add: 'Use Heading 1 for each section title and bullet points under each heading.'
- Run this workflow every Friday and your Notion workspace will build up a running archive of Weekly Reports over time.
