14-Day AI Accelerator Program

Pre-Read VII

Session Name: Building “Jerry”

Table of Contents

Chapter 1: What You Will Learn

- 1.1 Introduction to Building Jerry
- 1.2 Tools Covered in the Session

Chapter 2: Prerequisites

- 2.1 Tools You Will Use in This Session
- 2.2 Step-by-Step Guide to Set Up Tools
- 2.3 Basic Knowledge and Familiarity

Chapter 3: Key Takeaways Before the Session

- 3.1 What to Expect in the Session
- 3.2 Summary Checklist

Chapter 1: What You Will Learn

1.1 Introduction to Building Jerry

In this session, you will:

- Learn how to create and configure a **Telegram bot** to act as your personal AI assistant, Jerry.
- Use **n8n**, a no-code automation tool, to set up workflows that automate tasks like responding to emails, managing your calendar, and more.
- Integrate Jerry with tools such as **Gmail** and **Google Calendar** to handle and process tasks for you.

1.2 Tools Covered in the Session

You will use the following tools to create Jerry:

- **Telegram Bot API:** For creating the bot (Jerry) that interacts with users and automates tasks.
 - **n8n:** A no-code platform to create workflows that automate tasks like email management, calendar scheduling, and more.
 - **Gmail:** For receiving and sending customer emails, enabling the agent to interact directly with customers.
 - **Google Calendar:** For managing calendar events like scheduling meetings, checking availability, and sending reminders.
-

Chapter 2: Prerequisites

2.1 Tools You Will Use in This Session

Before the session, please ensure you sign up for the following tools:

1. Telegram

- **What to do:** Sign up for **Telegram** and create a **bot** using **BotFather**. **Note:** You must **download** the **Telegram app** on your mobile or desktop, as it does not work in the web version.

- [Download Telegram for Desktop](#)

- **Step-by-Step:**

1. Download and install the **Telegram** app on your mobile device or desktop.
2. Open Telegram and search for **BotFather** (official bot creation tool).
3. Start a conversation with **BotFather** and type `/newbot`.
4. Follow the prompts to create a new bot by providing a name and username (ending with `_bot`).
5. **BotFather** will give you an **API token** - save this for the session.

2. n8n

- **What to do:** Sign up for **n8n** to build and automate workflows.

- [Sign Up for n8n](#)

- **Step-by-Step:**

1. Visit the **n8n** website and click **Sign Up**.
2. Register using your email address or Google account.
3. Once signed in, you'll be able to access the **n8n Dashboard** to start building workflows.

3. Gmail

- **What to do:** Ensure your **Gmail account** is active and ready for integration with **n8n**.

- [Sign Up for Gmail](#)

- **Step-by-Step:**

1. Go to **Gmail** and sign up or log in if you already have an account.
2. Make sure your Gmail account is set up for integration with **n8n** during the session (we will cover the integration details in the session).

4. Google Calendar

- **What to do:** Ensure you have **Google Calendar** set up for event management.

- [Sign Up for Google Calendar](#)

- **Step-by-Step:**

1. Visit **Google Calendar** and sign in with your Google account.
2. Make sure you can create events and manage your calendar, as we'll be automating calendar tasks in the session.

2.2 Basic Knowledge and Familiarity

- **No coding skills required** - this session is designed to be done entirely using **n8n's no-code platform**.
- **Basic understanding of customer support scenarios** (e.g., handling simple queries, email responses) will be helpful in building your assistant's tasks.

Chapter 3: Key Takeaways Before the Session

3.1 What to Expect in the Session

- **Hands-on learning:** You'll create a **personalised AI assistant**, Jerry, that can automate everyday tasks like managing emails, scheduling meetings, and more.

- **Real-world application:** The session will focus on using **Telegram**, **n8n**, **Gmail**, and **Google Calendar** to automate real tasks.

3.2 Summary Checklist

- **Sign up for Telegram, n8n, Gmail, and Google Calendar.**
 - **Think about tasks** you want your AI assistant, Jerry, to handle (e.g., managing emails, scheduling meetings).
 - Be ready for **hands-on learning** as we guide you through building Jerry and automating tasks step-by-step.
-
