

Day 9 Office Hours Session

09:12 - 09:19

Sumedha: Hello, everyone. Welcome back to your AI Accelerator OSRs. How is everyone doing?

09:20 - 09:30

Sumedha: Warm, warm welcome to your officers. Very good evening, good morning, good afternoon from wherever you are joining in. Warm, warm welcome to the session.

09:31 - 09:38

Sumedha: Alright, perfectly fine. Come on, guys, the chat is open. How is everyone doing? How is the energy? Is it that low?

09:41 - 09:45

Sumedha: Amazing. I am also doing well. Thank you so much for asking.

09:46 - 09:50

Sumedha: Amazing. Alright, now I see the energy in the chat.

09:51 - 10:10

Sumedha: Yes, it's already day 9. Can you imagine? I feel like it's just yesterday we just started, and it's already day 9 today. So, yeah, that is amazing, and I am very happy to see that you all are having that high energy that you had from day 1.

10:10 - 10:12

Sumedha: So that is amazing.

10:12 - 10:34

Sumedha: So, with that, without any further ado, as you know the agenda already, we will be starting with our leftover questions from yesterday. We will pick those up, and in the meantime,

I'm also dropping the Slido link in the chat. There you go. So, you just have to put up your questions, upvote the questions that you think, you need the answers to most.

10:34 - 10:44

Sumedha: And we have Samrati with us today. Welcome back, Samrati. So, Samrati will be taking up all those questions, one by one, as per the basis of popularity.

10:44 - 10:51

Sumedha: All right, with that, I will leave the call to you, Samrati, for the next one hour, and over to you.

10:53 - 10:55

Samruddhi Mokal Outskill: Hello, everyone!

10:55 - 10:59

Samruddhi Mokal Outskill: I'll quickly share the screen, and we'll get started without further ado.

11:00 - 11:03

Samruddhi Mokal Outskill: Alright, I hope my screen is visible, guys.

11:05 - 11:06

Samruddhi Mokal Outskill: Okay.

11:08 - 11:10

Samruddhi Mokal Outskill: Okay, getting started with the first one.

11:12 - 11:20

Samruddhi Mokal Outskill: How to do workflow on NHN for WhatsApp. So, N10 has a specific node for WhatsApp, and there are two ways to do this.

11:21 - 11:28

Samruddhi Mokal Outskill: First is, if you're using WhatsApp's official APIs, or Meta's official APIs for WhatsApp.

11:28 - 11:39

Samruddhi Mokal Outskill: You'll be able to integrate only for WhatsApp's business account, but if you want to integrate your personal WhatsApp as well, you will have to use a tool called as UniPipe.

11:40 - 11:45

Samruddhi Mokal Outskill: I showed this yesterday as well, so get Unipiled APIs and create your

11:45 - 11:49

Samruddhi Mokal Outskill: UniPil account, and you can connect your personal WhatsApp to UniPil.

11:55 - 12:12

Samruddhi Mokal Outskill: Okay, you said Aneten creates a webhook. Did I understand correctly? Yes, Aneten creates the webhook. And second part is, if I have a trigger to get data from Google Forms, will Annet create a webhook automatically for getting data from Google Sheet?

12:13 - 12:19

Samruddhi Mokal Outskill: Okay, so Google Forms and Google Sheets are two separate things, and Google Forms has its own link.

12:19 - 12:29

Samruddhi Mokal Outskill: So, by default, you do not connect your Google Forms to a webhook. So, what your trigger is going to be, if you have Google Forms, is your trigger is going to be Google Forms itself. In that case, you do not need a webhook.

12:30 - 12:36

Samruddhi Mokal Outskill: But the concept that you'll be using in the backend is going to be similar, like, once your form is submitted.

12:37 - 12:43

Samruddhi Mokal Outskill: the nin workflow will be triggered, and it will store the data in your Google Sheets, but you do not need a webhook trigger for that.

12:46 - 12:47

Samruddhi Mokal Outskill: And do I set it up?

12:48 - 12:55

Samruddhi Mokal Outskill: set it up trigger as... get data from Google Sheet, and it automatically becomes a webhook. So again, so whatever nodes you are able to see.

12:55 - 13:14

Samruddhi Mokal Outskill: NATN has different trigger nodes, whether it's for Google Sheet, whether it's for Google Forms. So for Google Sheets, if you see that a new data has been added to a specific row, you can trigger the workflow within NHN's node itself. So if those specific nodes are not available, only then switch to WebBooks. If those nodes are already available, stick to the nodes that are already there.

13:18 - 13:20

Samruddhi Mokal Outskill: Patricia, yes, sure, I'll try my best, yeah.

13:22 - 13:38

Samruddhi Mokal Outskill: Okay, why has Google created Google DeepMind, even though Gemini does most things? Okay. So Google DeepMind is an AI research institute that has developed Gemini. So, Gemini is a product of DeepMind.

13:38 - 13:53

Samruddhi Mokal Outskill: And DeepMind was acquired by Google, when... a few years back. So that time, DeepMind was working on AlphaGo, etc. So if you know how AI started getting developed was, they started building bots which could play chess, or which could play,

13:53 - 14:03

Samruddhi Mokal Outskill: AlphaGo type of games, so that's what Google DeepMind did amazing, and from there, they started working on their AI side of things, and Gemini is just a product of DeepMind.

14:06 - 14:14

Samruddhi Mokal Outskill: What is the difference between bot and agent? So, by definition, bot is supposed to be only if-else statements.

14:14 - 14:37

Samruddhi Mokal Outskill: If you guys know how WhatsApps bots were there initially, like, if someone selects a specific option, then it is supposed to reply this, or then it is supposed to send next list of options. So that's what bots were supposed to do, and AI Agent has a capability that if you give it a task, it has its own thinking capacity, it has its own tools, and it is a dynamic thing that the AI Agent can take on behalf of you.

14:37 - 14:44

Samruddhi Mokal Outskill: But at this point of time, the industry is using the bot and agent term very interchangeably, but by... this is a definition.

14:44 - 14:45

Samruddhi Mokal Outskill: Of bot and agent.

14:48 - 15:01

Samruddhi Mokal Outskill: Are the Outskills platforms and websites built and managed without a software development team? I just wanted to know whether managing all of these is possible as an on-coder. So this is a question that Sumedha will have to take up. I'll park it for now.

15:04 - 15:16

Samruddhi Mokal Outskill: How do you connect your website built with one of those tools mentioned to your web server and domain? Also, let's say if you have created, white-coded a website on Lovable or Boldt.

15:16 - 15:24

Samruddhi Mokal Outskill: There, you'll be able to find a button Publish, and when you publish it, it will give you one more option. Do you want to connect your custom domain?

15:25 - 15:33

Samruddhi Mokal Outskill: So you have to buy your domain from a domain provider. At this point of time, Lovable, Boldt, etc, they have also started providing you domains. But how to connect those is...

15:34 - 15:38

Samruddhi Mokal Outskill: How you connect your different tools using API keys.

15:38 - 15:55

Samruddhi Mokal Outskill: Similarly, domain has something called as DNS. So you have to get your DNS record from your domain server provider, and you have to put that similarly, how you put your API key in a specific box when you try to connect your domain, and your domain will get connected to your web server.

15:55 - 16:04

Samruddhi Mokal Outskill: That is first, the server will be provided by your lovable or bold, but let's say if you're using completely custom-coded tool, like, cursor or,

16:05 - 16:06

Samruddhi Mokal Outskill: Cloud Code.

16:06 - 16:12

Samruddhi Mokal Outskill: In that case, You will have to, first put your code on a

16:12 - 16:14

Samruddhi Mokal Outskill: Let's say on Vercel, hosting platform.

16:15 - 16:23

Samruddhi Mokal Outskill: So when you put your code on WordCell, it will go live, and on WordCell, then you can connect your own domain again using similar ways.

16:29 - 16:38

Samruddhi Mokal Outskill: Okay, B2B orders come in messy over email and WhatsApp. A WhatsTack turns them into ERP entries automatically.

16:40 - 16:45

Samruddhi Mokal Outskill: So, first is it depends on what type of ERP system you are using. Some of the ERPs have already

16:45 - 17:03

Samruddhi Mokal Outskill: this verification layer where they clean up the data, that is called as data cleaning. If that is not there, you can add your own step of data cleaning before it goes to this ERP software. So you can create, let's say you can create your own NATN workflow, add a step where you do the data cleaning.

17:03 - 17:14

Samruddhi Mokal Outskill: Data cleaning, as in, you do not even have to add an AI agent. If you think that specific terms are coming, if it is just keyword to keyword specific, then you can just add a code node here.

17:16 - 17:19

Samruddhi Mokal Outskill: So, there is a node called as Code Node.

17:19 - 17:27

Samruddhi Mokal Outskill: So you can just add a code node, develop a simple JavaScript or Python code, which will filter out the required data and format it in the right way.

17:27 - 17:34

Samruddhi Mokal Outskill: If that is not doing the job, only then switch to your AI agent, which needs dynamic thinking. Without

17:36 - 17:42

Samruddhi Mokal Outskill: Without dynamic thinking requirement, do not switch to AI Agent, because you'll just keep on adding cost without requirement.

17:48 - 17:57

Samruddhi Mokal Outskill: Okay, when I upload a large PDF to any LLM, it consumes a lot of tokens. Is there any hack to minimize that?

17:57 - 18:09

Samruddhi Mokal Outskill: So there is no hack to minimize that as such. The only thing you can do is, if the entire PDF is not required, only a specific part of it is required, you can just get that text and paste it.

18:09 - 18:14

Samruddhi Mokal Outskill: And that is one second is, if you want to keep using it again and again.

18:14 - 18:23

Samruddhi Mokal Outskill: Create a RAG out of it. If it is a one-time thing only, then it uploaded completely as a PDF. If it is a recurring thing, create a RAG, and that will save you a lot of cookies.

18:25 - 18:28

Samruddhi Mokal Outskill: Oh, Helen, is it fine now, Helen and Patricia?

18:33 - 18:35

Samruddhi Mokal Outskill: Three questions. First is...

18:36 - 18:50

Samruddhi Mokal Outskill: What is the difference between anti-gravity EXE download versus anti-gravity IDE.exe download? Second, what is the difference between anti-gravity and anti-gravity IDE? And third, is the

18:50 - 18:54

Samruddhi Mokal Outskill: ID.exe is specific to a browser. Okay.

18:54 - 18:58

Samruddhi Mokal Outskill: So, both of those Are products of anti-gravity only.

18:58 - 19:02

Samruddhi Mokal Outskill: Anti-gravity EXC is the coding agent.

19:02 - 19:08

Samruddhi Mokal Outskill: Anti-gravity IDE is more like a platform, if you guys have seen what is VS Code, that

19:08 - 19:27

Samruddhi Mokal Outskill: A lot of coders use, you might be seeing a lot of terminal kind of things, a lot of extensions, or a lot of files open. In this case, you'll be able to see your code appear here, code blocks appear here. So that is what IDE is. It is an interface that lets you do a lot of coding things, but anti-gravity sits on top of, anti-gravity IDE.

19:27 - 19:35

Samruddhi Mokal Outskill: So even if you're downloading anti-gravity IDE, by default, you're going to use anti-gravity's coding agent within anti-gravity.

19:35 - 19:41

Samruddhi Mokal Outskill: And .exe are just the file formats. If you download Anti-gravity EXE, so think of it like a...

19:41 - 19:43

Samruddhi Mokal Outskill: Mobile app that you download.

19:43 - 19:53

Samruddhi Mokal Outskill: If you're downloading this anti-gravity EXE, you're just downloading their coding agent. If you're downloading IDE.exe, you are going to download the file, or download the software, which is the IDE part.

19:54 - 19:58

Samruddhi Mokal Outskill: And is ID specific to a browser? No, ID is not specific to a browser.

20:04 - 20:11

Samruddhi Mokal Outskill: First, when Anetan downloaded locally, unable to connect to Gmail tools, when I mentioned

20:12 - 20:21

Samruddhi Mokal Outskill: Connect to Gmail, the version on the NATN website and local are entirely different. Can let me know what is the step to connect to Gmail if I use local NHN, thanks. Okay.

20:22 - 20:31

Samruddhi Mokal Outskill: Also, when you're using local NHN, you'll be facing certain types of challenges, and this is one of them. So whenever you're trying to connect your APIs, etc.

20:31 - 20:36

Samruddhi Mokal Outskill: You need to follow a few more technical steps, a few more extra steps to get it connected.

20:37 - 20:45

Samruddhi Mokal Outskill: And especially for Google, you will have to go to Google Cloud Console, that is a very lengthy step, so I'll... I'll share one YouTube video with you, that is going to be roughly,

20:45 - 20:58

Samruddhi Mokal Outskill: 30 minutes long video, so you'll have to follow all of those steps and get your nit and connected to all your Gmail tools. But in short, what that does is, you go to your Google Cloud console, you create something called as web app in it.

20:58 - 21:08

Samruddhi Mokal Outskill: You give your NHN's URL to it so that it is connected to your local NHN, and in that, you give it required permissions. For example, in this case.

21:09 - 21:17

Samruddhi Mokal Outskill: you want to connect your Gmail. So even in Gmail, Gmail has multiple APIs. So all of these nodes that you saw for your

21:18 - 21:19

Samruddhi Mokal Outskill: edit in Gmail.

21:23 - 21:38

Samruddhi Mokal Outskill: So these are, let's say, 26 actions. So all of these are separate API calls, or separate API endpoints. So in your Google Cloud Console, you'll have to tick mark all of the checkboxes that you want to give that API permission to, and then you will get your something called a grind secret.

21:38 - 21:43

Samruddhi Mokal Outskill: It is similar to API key, so you have to get that client secret and paste it in your local nit and

21:44 - 21:46

Samruddhi Mokal Outskill: Gmail node, and then it will get connected.

21:52 - 21:58

Samruddhi Mokal Outskill: I'll share a YouTube video that will give you an understanding about it, because that is a very lengthy process. The video itself is half an hour long.

22:01 - 22:09

Samruddhi Mokal Outskill: For personal WhatsApp API with UniPile, is there any risk of account block? I personally haven't seen any personal risk of account block.

22:09 - 22:21

Samruddhi Mokal Outskill: But, make sure, whether you're using WhatsApp Business or WhatsApp's personal account, do not fire away hundreds of different messages in one go, regardless if you're using Unipile or,

22:21 - 22:32

Samruddhi Mokal Outskill: using normally sending out messages, WhatsApp will block you, because this happened to me recently, like, we had a family function, and I just blasted everyone, whoever was there in my

22:32 - 22:45

Samruddhi Mokal Outskill: WhatsApp, I just blasted the invitations to them, and my WhatsApp was blocked for 24 hours. So that is what WhatsApp does without even using AI agents, or without even adding AI. So just make sure you are in the safe limits of it.

22:45 - 22:51

Samruddhi Mokal Outskill: And try to, when you're using AI, that is one added advantage, like, if you're typing out manually.

22:52 - 22:57

Samruddhi Mokal Outskill: just try to forward whatever is there, but if you're using AI, try to do some changes.

22:57 - 23:01

Samruddhi Mokal Outskill: to your messages, for example, adding some personalization or changing the

23:01 - 23:12

Samruddhi Mokal Outskill: language of it a bit. Context remains the same, but just that wording and the linings are different, so that WhatsApp does not recognize that this is the same message that is getting passed on.

23:16 - 23:20

Samruddhi Mokal Outskill: The workbooks of all the sessions we completed in breakout rooms.

23:20 - 23:28

Samruddhi Mokal Outskill: Please, will there be video shared, even if it's previous ones, to show how to complete the steps? Watching the video step by step, thanks.

23:28 - 23:35

Samruddhi Mokal Outskill: Also, especially for your Workbooks, I think there are demo videos attached.

23:35 - 23:39

Samruddhi Mokal Outskill: So you can go and check those demo videos at the starting of your workbooks.

23:45 - 23:53

Samruddhi Mokal Outskill: how to connect Big Bucket with Cursor. So I think you guys will be learning about Cursor further, but there are multiple ways to connect any software with Cursor.

23:53 - 24:09

Samruddhi Mokal Outskill: First is, you can add everything in your code and see what is the API documentation of any softwares that are there. Another is you can install extensions. If the extension is already there, you can just install those extensions and start using it. If not, like, the last go-to is Terminal.

24:12 - 24:18

Samruddhi Mokal Outskill: How to connect email, unstructured data with CRM or ERB, which tool to use?

24:19 - 24:25

Samruddhi Mokal Outskill: I didn't get this question, what do you exactly mean by unstructured data with CRM?

24:28 - 24:34

Samruddhi Mokal Outskill: So I'll keep this question for... aside. Just drop it in the chat, what exactly you mean by this part.

24:40 - 24:56

Samruddhi Mokal Outskill: Why are these days recordings, transcripts, postreads, and resources available so late? We want to review and solve. Again, guys, this is for Sumedha, so if you have anything... queries related to your program, just drop them in the chats. I'm not the right person to answer. Sumedha will take up those questions in the chats for you.

24:59 - 25:02

Samruddhi Mokal Outskill: Okay, that is unstructured data.

25:02 - 25:12

Samruddhi Mokal Outskill: Also, you just have to add a... add one more layer, similar to what I mentioned as data cleaning. So, before it passes on, add a code node.

25:13 - 25:20

Samruddhi Mokal Outskill: Add a simple code that will just get the data structured in the right format, and then pass it on further to your CRMs, etc.

25:22 - 25:35

Samruddhi Mokal Outskill: So personally, I use CodeNode, but if you want to add AI Agent Lair on top of it, you can add that, but usually, just for data's sake, because you're not doing any type of changes to it, you're already using the already existing data, just...

25:35 - 25:54

Samruddhi Mokal Outskill: changing the format of it. So you do not need AI over there or LLMs over there to think, you just need a specific code which does the job for you. So just add a code node, and ask your NHN's AI assistant, this is my data, this is how I want it to be formatted or structured. It will build the entire code node for you, and then later on, pass it on to the CRM or the ERP system.

26:01 - 26:04

Samruddhi Mokal Outskill: When people say connect to your Slack or other Slack.

26:05 - 26:10

Samruddhi Mokal Outskill: What does Slack mean? Can you show and explain this? So Slack is just a...

26:10 - 26:17

Samruddhi Mokal Outskill: Teams communication platform. So, if you guys are aware of what is Microsoft Teams, similar is Slack, it is just a way where people

26:17 - 26:20

Samruddhi Mokal Outskill: In organizations communicate with each other.

26:25 - 26:28

Samruddhi Mokal Outskill: Will ID be contained in the full anti-gravity download?

26:29 - 26:41

Samruddhi Mokal Outskill: Also, anti-gravity has two downloads. If you're downloading specifically the IDE part, only then anti-gravity ID will be there. I think you guys have a session on anti-gravity ID tomorrow, so you'll get a better understanding about it.

26:49 - 26:58

Samruddhi Mokal Outskill: Can you please quickly walk through the setup of LibertChat and Open Router? Your working setup would help, if you can demonstrate. Okay, so usually.

27:00 - 27:03

Samruddhi Mokal Outskill: I think I have my open router logged in here.

27:05 - 27:07

Samruddhi Mokal Outskill: Let me check.

27:09 - 27:12

Samruddhi Mokal Outskill: Yes, so my open router is logged in, I'll show you my open router setup.

27:13 - 27:15

Samruddhi Mokal Outskill: So what usually I do with open router is.

27:16 - 27:19

Samruddhi Mokal Outskill: Open Router is going to provide you models.

27:19 - 27:21

Samruddhi Mokal Outskill: Let's say hundreds of different models.

27:22 - 27:31

Samruddhi Mokal Outskill: So my personal recommendation is use OpenRouter's API keys instead of getting, let's say, Anthropic's API key, OpenAI's API key, Gemini's API key, instead of adding, like.

27:32 - 27:41

Samruddhi Mokal Outskill: tens or \$5 of credits in all of these 100 different accounts, so I prefer adding few credits to OpenRouter, get OpenRouter's API key, and access all of these models.

27:41 - 27:45

Samruddhi Mokal Outskill: That is the first. Second is, you can similarly create your own API keys.

27:46 - 27:50

Samruddhi Mokal Outskill: You can go to credits, you can create your API keys, I'm...

27:50 - 27:54

Samruddhi Mokal Outskill: With one API key, you can access all of the models that are there.

27:55 - 27:58

Samruddhi Mokal Outskill: So, for example, if I go to a different workflow.

28:05 - 28:07

Samruddhi Mokal Outskill: Okay, so in the meanwhile, it's loading.

28:09 - 28:24

Samruddhi Mokal Outskill: why Open Router is recommended is, first, you do not have to add a lot of credits to different accounts, because each of these accounts have minimum requirement, right? So you add \$5 here, you add \$5 there, without even using it, just because you want to test it out. That is one. Second is.

28:25 - 28:31

Samruddhi Mokal Outskill: All of these systems or softwares have their own maintenance times, or downtimes.

28:32 - 28:38

Samruddhi Mokal Outskill: So, let's say I just opened this, Anthropyx Lord Status Page.

28:44 - 28:49

Samruddhi Mokal Outskill: Yeah, so at this point, everything is operational, but if I go here.

28:49 - 28:52

Samruddhi Mokal Outskill: There was a partial outage for 3 hours, 6 minutes.

28:53 - 29:00

Samruddhi Mokal Outskill: This was for Cloud AI, this was for console, this was for API, this was for code, co-work, etc.

29:00 - 29:15

Samruddhi Mokal Outskill: So when something goes down, you cannot explain to your client, okay, this software is wrong, that's why it's not working for ours. So what you can do is, when you have open router, you can quickly switch within the same node, or same setup, just a different model.

29:16 - 29:26

Samruddhi Mokal Outskill: But if you have a... let's say if you have separate API keys for separate accounts, you have to configure everything separately, because the configuration of the APIs are going to be different for each of those accounts.

29:26 - 29:29

Samruddhi Mokal Outskill: So that is another reason why open router is preferred.

29:35 - 29:39

Samruddhi Mokal Outskill: Do I have... okay, we don't have OpenAI Node.

29:41 - 29:42

Samruddhi Mokal Outskill: Alright, I'll open Jerry.

29:44 - 29:46

Samruddhi Mokal Outskill: And I'll delete this one.

29:48 - 29:52

Samruddhi Mokal Outskill: In chat model, what you can do is you can just add open router chat model.

29:54 - 29:56

Samruddhi Mokal Outskill: So there is Open Data Node available.

29:58 - 30:07

Samruddhi Mokal Outskill: So you can see I have added my API key. You'll be able to see hundreds of different models that are there here. So you can just switch to a different model, whatever you want, with the same API key.

30:07 - 30:10

Samruddhi Mokal Outskill: And if you're using it for clients, make sure you use

30:10 - 30:16

Samruddhi Mokal Outskill: you create separate EPA key for each client, or else you won't be able to track what is the usage of everything.

30:25 - 30:32

Samruddhi Mokal Outskill: A few months back, one of the mentors had shown an AI assistant write on his computer throughout.

30:32 - 30:39

Samruddhi Mokal Outskill: That AI assistant could listen to what was being discussed, it could even reply to questions in between.

30:39 - 30:44

Samruddhi Mokal Outskill: As if a real person was sitting with the mentor, When or how will...

30:45 - 30:53

Samruddhi Mokal Outskill: How will we have something like that? So I'm not sure if this is part of your sessions or not, but what this actually is, is

30:53 - 30:55

Samruddhi Mokal Outskill: This is something called as,

30:56 - 31:06

Samruddhi Mokal Outskill: browser use or desktop use. And if you're using Cloud Desktop, Cloud Desktop also has the ability to do all of these things. So, in some cases, it also sees what is happening in your screen.

31:06 - 31:16

Samruddhi Mokal Outskill: analyzes all the pixels, it sees what actions you're taking, and it can take action on your behalf. So that is just desktop use that is already there in Claude or Codex.

31:16 - 31:27

Samruddhi Mokal Outskill: So you... you don't get... you don't have to see... think of it like it is something extraordinary. That is already there in the existing tools that you're learning. You just have to figure out use cases and how to do it.

31:30 - 31:39

Samruddhi Mokal Outskill: Sorry, but no one answers in the normal chat, that is why we have to ask here, okay? I'll pass this feedback on to Sumeda, or Sumedha, if you're listening, maybe you can take it up in the chats.

31:44 - 31:46

Samruddhi Mokal Outskill: With services like Open Router.

31:47 - 32:00

Samruddhi Mokal Outskill: Do we get good LLMs in each agent? Like, different models within ChatGPT, or just that they select? No. You don't have to, like, it is not something they select. All the models are available in the list, and

32:00 - 32:09

Samruddhi Mokal Outskill: They are not making any changes to the models that you're seeing on Open Router. They are already existing models, which Open Router is providing to you.

32:09 - 32:20

Samruddhi Mokal Outskill: So if you're seeing GPT-5 Mini on Open Router, and even if you're using OpenAI's chat node, and you are seeing GPT-5 Mini in that, both of the models are the same, there is no difference in both of the models.

32:21 - 32:30

Samruddhi Mokal Outskill: So you do not have to worry, like, if you're using a model through Open Data, if that is a different Models or not. They are the same models that you will get if you go to the individual services and get those models.

32:36 - 32:43

Samruddhi Mokal Outskill: I have had issues when Outskill's APIs expired, and when trying to use my own OpenAI ones.

32:43 - 32:51

Samruddhi Mokal Outskill: I paid fees and got it set up, but it doesn't, like, comes back with conflicts about which model uses

32:52 - 33:01

Samruddhi Mokal Outskill: example, GBD4, many an authority. Could Anetan and OpenAI have different email addresses registered because... Also, Anetan's...

33:01 - 33:07

Samruddhi Mokal Outskill: email address does not have to do anything with OpenAI's email address. You just have to

33:07 - 33:16

Samruddhi Mokal Outskill: see if there are, so OpenAI, sometimes if there is a huge demand, this is not just with OpenAI, this is with all of these companies.

33:16 - 33:25

Samruddhi Mokal Outskill: So they have specific tiers of users. So some of them who use their APIs a lot, they are in Tier 3. And at this point, if

33:26 - 33:36

Samruddhi Mokal Outskill: they have a huge demand, they prioritize those users. So sometimes that might be the issue. So just try reconnecting, or create a different API key, and try connecting it again.

33:40 - 33:46

Samruddhi Mokal Outskill: Or can you also demo how to connect NHN and ChatGPT? Also, at this point of time, Annet and

33:47 - 33:51

Samruddhi Mokal Outskill: does not have an MCP server on ChatGPT, that is only available on Claude.

33:52 - 33:56

Samruddhi Mokal Outskill: So you cannot directly connect your NN accounts in ChatGPT.

34:02 - 34:10

Samruddhi Mokal Outskill: When connecting NHN to Claude, what will be the server if the NHN is saved locally? Can you demonstrate it?

34:10 - 34:12

Samruddhi Mokal Outskill: So, if you have anything...

34:13 - 34:18

Samruddhi Mokal Outskill: running locally, what is going to happen is, at this point, if you're able to see my URL, it is something like...

34:19 - 34:20

Samruddhi Mokal Outskill: nitn.cloud.

34:20 - 34:27

Samruddhi Mokal Outskill: But if you're running something locally, the URL is going to be localhost something something. But that is available only on your systems.

34:28 - 34:33

Samruddhi Mokal Outskill: So what you have to do is, you have to create a tunnel using ngrok.

34:34 - 34:47

Samruddhi Mokal Outskill: So, when you will watch, I think that is covered in your NHN's local hosting video on your LMS, but you have to make your URL public using your ngro, and once you make that URL public, then you can use that URL in your plot.

34:54 - 34:57

Samruddhi Mokal Outskill: Can we make an assistant like Jerry outside NATN?

34:57 - 35:04

Samruddhi Mokal Outskill: Yes, definitely. So, Jerry is just an AI agent that is taking some actions on behalf of you.

35:04 - 35:10

Samruddhi Mokal Outskill: So, if you just, create a custom code that can also do the job.

35:10 - 35:13

Samruddhi Mokal Outskill: So it is about getting the job done than

35:13 - 35:20

Samruddhi Mokal Outskill: creating a workflow on your NN. Can you custom code it? Yes, definitely, you can custom code it. But if you're custom coding it, what happens is.

35:21 - 35:33

Samruddhi Mokal Outskill: If you're using different softwares, you have to go through the API documentations of all of those softwares, like how you connected your Fireflies, right? N10 has all of these inbuilt nodes, and in the backend.

35:33 - 35:36

Samruddhi Mokal Outskill: These nodes are, by default, calling those APIs.

35:38 - 35:39

Samruddhi Mokal Outskill: So...

35:39 - 35:45

Samruddhi Mokal Outskill: Instead of having these nodes, you will have to configure everything what you saw in this node using code.

35:46 - 35:52

Samruddhi Mokal Outskill: So that... that is going to complicate things for you, but can you do that outside NATM? Yes, definitely you can do that job.

35:57 - 36:07

Samruddhi Mokal Outskill: What is the cost-benefit of using Open Router? Meaning, at what threshold one should stop paying for services individually and use OR instead?

36:08 - 36:24

Samruddhi Mokal Outskill: Okay, I explained this, but I'll once again tell you, two main reasons of using Open Router is, first, Open Router gives you access to all of the models. So if I just add \$5 of credit to my Open Router, I can get access to all of the models. But if I'm using

36:24 - 36:27

Samruddhi Mokal Outskill: OpenAI, Anthropic, or all of these

36:27 - 36:33

Samruddhi Mokal Outskill: services individually. Minimum requirement is \$5, so I'm adding \$5 to all of these 3 accounts.

36:34 - 36:40

Samruddhi Mokal Outskill: So that is one, that is the saving cost, and second is, all of these services have their own down times.

36:40 - 36:56

Samruddhi Mokal Outskill: If you're using OpenAI, sorry, Open Router, you can immediately switch to different models in one go. You do not have to change your setup for it, your setup remains the same, credentials remains the same, only the model changes for that specific amount of time till your service is up and running again.

36:57 - 36:59

Samruddhi Mokal Outskill: So those are the two main reasons.

37:05 - 37:07

Samruddhi Mokal Outskill: If you copy a workflow.

37:08 - 37:15

Samruddhi Mokal Outskill: And, okay, I'm assuming that is paste. Paste it to a different account. Publish is grayed out, how can this be enabled?

37:16 - 37:20

Samruddhi Mokal Outskill: Also, publish will be enabled only if you resolve all of the...

37:21 - 37:26

Samruddhi Mokal Outskill: exclamation marks that are going to be there in it. For example, let's say I copy-pasted this.

37:28 - 37:34

Samruddhi Mokal Outskill: This is having an exclamation mark. And if you, by default, if you're copying someone else's workflow, what happens is.

37:35 - 37:50

Samruddhi Mokal Outskill: you're not copying their credentials. So if you do not have added your credentials to your NATN account first, you will first have to add those credentials, and once this error is resolved, only then you will be able to publish it. For example, right now, I just removed it, my publish is grayed out. If I just connect it.

37:52 - 37:53

Samruddhi Mokal Outskill: It is back again.

37:53 - 38:05

Samruddhi Mokal Outskill: So I don't know what is the error in your workflow, but if... even if you do not know what is the error, take help of this AI assistant and tell... ask it that, tell me why I'm not able to publish it, define the errors for me, and tell me how to resolve those.

38:14 - 38:29

Samruddhi Mokal Outskill: During this course, we have authorized so many apps and associated our Gmail account. Is there any way by which we can know where we have used our Gmail account and what we have authorized them?

38:29 - 38:34

Samruddhi Mokal Outskill: So that we keep only those things associated with the Gmail account for which we work.

38:34 - 38:41

Samruddhi Mokal Outskill: So, if you go to any, there is, if you go to Settings, etc, you will find something called as, credentials.

38:41 - 38:54

Samruddhi Mokal Outskill: In credentials, you'll be able to see what all credentials you have added, which all credentials you have added, and you can just revoke those access from there. Similarly, for other apps also, Credentials tab exists, so just check out those before

38:54 - 38:59

Samruddhi Mokal Outskill: Once your course is completed, or before your course is completed, so that you can revoke the access from there.

39:05 - 39:09

Samruddhi Mokal Outskill: Why did we put the list yesterday to GitHub, or never understood the reason?

39:10 - 39:16

Samruddhi Mokal Outskill: Also, I don't know what was there in yesterday's session, I was not part of yesterday's session. So, usually, why we use GitHub is...

39:17 - 39:21

Samruddhi Mokal Outskill: So think of GitHub like your Google Drive for Code.

39:22 - 39:29

Samruddhi Mokal Outskill: And most of the time, what happens is, if you are... multiple people are working on the same project, what you do is.

39:29 - 39:31

Samruddhi Mokal Outskill: You put your code to GitHub.

39:31 - 39:37

Samruddhi Mokal Outskill: And someone or your teammates can collaborate on that code and add their changes.

39:37 - 39:44

Samruddhi Mokal Outskill: Or let's say if you have multiple people working on different features, so what you're going to do is, you're just going to upload it on the main branch of GitHub.

39:46 - 39:58

Samruddhi Mokal Outskill: Abhiit was stored so that we can use it in the future to solve our project when we work on Hackathon. Okay, so this is the reason. So if you publish your code on GitHub, there is something called as main branch.

39:58 - 40:05

Samruddhi Mokal Outskill: Main branches, Where you... Which is hosted, and there are going to be sub-branches.

40:06 - 40:12

Samruddhi Mokal Outskill: Main branch is something that is live, or what your users are seeing live on your website or web app, etc.

40:12 - 40:29

Samruddhi Mokal Outskill: If you're using multiple different branches, what you can do is, one person can just update a specific branch or add a specific branch for a specific feature. That does not get, by default, added to your main branch. There is one more step added to it that is called as review.

40:29 - 40:45

Samruddhi Mokal Outskill: So only when the admin or the owner of that GitHub repo reviews that code, only then it gets merged with your main branch, and only then it goes live to your main account or your website. So that is what GitHub usually does.

40:46 - 40:51

Samruddhi Mokal Outskill: And another thing is GitHub's... it's very easy to share code using GitHub.

40:52 - 41:01

Samruddhi Mokal Outskill: So let's say if you have uploaded your code on GitHub, and I want to get my... get that code, what I have to do is I just have to use this one command called as gitub pull.

41:02 - 41:07

Samruddhi Mokal Outskill: In one command, I get the entire code, so instead of getting or downloading separate files.

41:08 - 41:11

Samruddhi Mokal Outskill: separately on my system, I just have to use the one command.

41:20 - 41:28

Samruddhi Mokal Outskill: In the return to webhook example from yesterday's workbook, how do you send a customized reply after submitting through Lovable?

41:29 - 41:31

Samruddhi Mokal Outskill: So, let me go to...

41:34 - 41:35

Samruddhi Mokal Outskill: B-Zero?

41:40 - 41:47

Samruddhi Mokal Outskill: Yeah, I think it was in my project. I have a lot of folders created here, so sometimes I get confused which workflow is in which folder.

41:48 - 41:48

Samruddhi Mokal Outskill: Okay.

41:50 - 42:02

Samruddhi Mokal Outskill: So what gets passed on to your respond to webhook is, what is your previous node? In this case, what output my AI agent is going... giving is going to get passed on to my respond to webhook.

42:02 - 42:16

Samruddhi Mokal Outskill: So you have to define what is the output of your previous node, so that Respond to Webhook catches that output, and then passes it on to your lovable. And to configure this Respond2Webhook, just add one prompt in your lovable, that is.

42:17 - 42:23

Samruddhi Mokal Outskill: When you're configuring this webhook, let me try opening my lovable... I have login in this system.

42:25 - 42:30

Samruddhi Mokal Outskill: So, there is just one prompt that you have to add, that is configure the same webhook to

42:31 - 42:34

Samruddhi Mokal Outskill: Receive the output of my previous

42:34 - 42:37

Samruddhi Mokal Outskill: WebBook. Alright, this does not have...

42:52 - 42:55

Samruddhi Mokal Outskill: Yeah, so this is going to be a first prompt.

42:55 - 43:03

Samruddhi Mokal Outskill: Once you have built your interface, this is your first prompt, configure the webhook for my XYZ, and give your webhook URL.

43:03 - 43:04

Samruddhi Mokal Outskill: Next is...

43:04 - 43:16

Samruddhi Mokal Outskill: In the next prompt, you tell it, give me the complete response of the webhook, including what all things I want in that. So you just configure the same webhook in the same chat, and it will give you the output of your workflow.

43:24 - 43:37

Samruddhi Mokal Outskill: How to create a RAG. Also, this is a very broad question about how to create a RAG. You guys had a session on customer support chatbots, so that was completely about RAG. So I'll give you an overview about how to create a RAG.

43:37 - 43:39

Samruddhi Mokal Outskill: So, one phase.

43:39 - 43:47

Samruddhi Mokal Outskill: If you see what are projects in this, you might see projects in your, ChatGPT or Cloud. Those are also RAND.

43:47 - 43:51

Samruddhi Mokal Outskill: So, it depends on what is your use case. So, think of it like,

43:52 - 43:55

Samruddhi Mokal Outskill: Three ways to do it. First is.

43:55 - 43:58

Samruddhi Mokal Outskill: You want to use it just individually.

43:58 - 44:16

Samruddhi Mokal Outskill: If you want to use it just individually, just stick to your projects inside your Cloud or ChatGPT, because that is very simple. You just upload those documents to your projects, and it fetches the required information from those documents and answers to you. That is the easiest way. Second is, if you just want to share it with limited people.

44:17 - 44:18

Samruddhi Mokal Outskill: Create custom GPDs.

44:19 - 44:28

Samruddhi Mokal Outskill: In custom GPTs also, you can add your own knowledge base, but with custom GPTs, what happens is, it gives you a link, and in link, you have multiple,

44:28 - 44:44

Samruddhi Mokal Outskill: formats to share that link. If it is... if your custom GPT is limited only to you, if it is limited to only to the people who you share the link with, if you want to make it completely public. So that is also... the setup is similar to how you create your project. You do not have to go with very technical setup.

44:45 - 44:52

Samruddhi Mokal Outskill: That is second way, and third is, if you want to integrate it in chatbots for multiple users or outside your team.

44:52 - 44:59

Samruddhi Mokal Outskill: on your websites, etc. Then, first is, you have to go to a vector store like Mindcone or Superbase.

45:00 - 45:09

Samruddhi Mokal Outskill: create your vector store over there, and then retrieve that data from your vector store, and connect your vector store with the AI agent, which is retrieving the data.

45:15 - 45:25

Samruddhi Mokal Outskill: During yesterday's class, Where to add an on-screen message in addition to sending an email?

45:26 - 45:32

Samruddhi Mokal Outskill: I could not figure out how to get the on-screen message to show up after submitting the form.

45:34 - 45:46

Samruddhi Mokal Outskill: So this is your... okay, so I think this was the same issue that happened. If you had used your webbook node, you had to configure your respond to web book. That is probably... you have not added this last prompt in your

45:46 - 45:54

Samruddhi Mokal Outskill: lovable, that is, give me the complete response of the webhook, including whatever you are supposed to fetch from the form. So just add this prompt, and it will

45:54 - 45:58

Samruddhi Mokal Outskill: Get the required data, or fetch the required data from your workflow.

46:03 - 46:05

Samruddhi Mokal Outskill: Based on what you said.

46:05 - 46:19

Samruddhi Mokal Outskill: If you're using Open Router, and your LLM has downtime, is your workflow automatically shifted to another LLM, so there is no interruption of service? So there are two ways to do that. First is.

46:20 - 46:22

Samruddhi Mokal Outskill: Similarly, have you mentioned here if?

46:22 - 46:27

Samruddhi Mokal Outskill: You can add an if node. If this node is not working, then it switched to a different route.

46:27 - 46:33

Samruddhi Mokal Outskill: That is one way to do that, if you want your workflows to be running... up and running all the time. Another is...

46:34 - 46:39

Samruddhi Mokal Outskill: So this is some... this is a best practice that you will also start following. Whenever you create a workflow.

46:40 - 46:44

Samruddhi Mokal Outskill: By default, you create an error workflow for it, or error notification workflow.

46:47 - 46:49

Samruddhi Mokal Outskill: Okay.

46:50 - 46:53

Samruddhi Mokal Outskill: Yeah, so this is one of my error workflows.

46:53 - 46:58

Samruddhi Mokal Outskill: So, what you do with this is, this starts with an error trigger. Error trigger is already there in your,

46:59 - 47:00

Samruddhi Mokal Outskill: NN accounts.

47:00 - 47:16

Samruddhi Mokal Outskill: And the workflows that you have configured this workflow for as error workflow, whenever those workflows face any error, it sends you a notification. So if you have a tech team, so this is not just for your open router models or LLM models.

47:16 - 47:33

Samruddhi Mokal Outskill: there might be multiple issues which are not even related to LLMs, which you might face on NITM. So any error that is happening in that workflow, this workflow is triggered, and it sends complete updates to whatever, in this case, this is email notification that I have configured, but if you're using Slack, Teams, whatever.

47:33 - 47:45

Samruddhi Mokal Outskill: You can send those error messages, and your tech team can be on top of it. So this is what usually we do for our client workflows as well. We set up an error workflow, and this error workflow is triggered when those specific workflows face issues.

47:55 - 48:08

Samruddhi Mokal Outskill: Could you demonstrate how Open Router is used to switch between different AI models, okay, that is sorted just now? Additionally, is it possible to utilize this for video production AI tools? Also, one thing with Open Router is.

48:09 - 48:10

Samruddhi Mokal Outskill: It has a lot of LLMs.

48:13 - 48:19

Samruddhi Mokal Outskill: Also, giving you an idea about LLMs or AI models. A lot of people use this term very interchangeably.

48:20 - 48:37

Samruddhi Mokal Outskill: But LLMs are just large language models, which are just text models. And there are different models for image generation or video generation. Open router is good for LLMs. It has all the models, lot of models for LLMs, but text, or sorry, image or video generation models are limited.

48:38 - 48:42

Samruddhi Mokal Outskill: the alternative to OpenAI, or sorry, Open Router for

48:42 - 48:45

Samruddhi Mokal Outskill: Image or video generation is fairly AI.

48:49 - 48:54

Samruddhi Mokal Outskill: So, how Open Router is for LLM? Similarly, FAL AI is for

48:54 - 49:09

Samruddhi Mokal Outskill: creative generation, that is image, video, audio, image to text, audio to different type of models. So all of these models are available in your FAL AI. So you can get FLI as one API key, and you can access all of these models that are there on FAL AI.

49:10 - 49:14

Samruddhi Mokal Outskill: So I'd recommend FAL for, especially for video production.

49:18 - 49:28

Samruddhi Mokal Outskill: You talk about videos on LMS for setting up NHN. When I reviewed AIAP content library, there are lots of sections by apps or tools

49:28 - 49:43

Samruddhi Mokal Outskill: But I do not see one for NN. Please advise in which section the NN videos are embedded. Also, this is, again, a question for Sumedha. I also do not have access to your LMS, but I just know that there is one video in your LMS, so Sumedha will be able to guide you exactly where this is.

49:47 - 49:53

Samruddhi Mokal Outskill: How do you plug AI into old, on-premise software with no API?

49:54 - 50:01

Samruddhi Mokal Outskill: Also, the only workaround for non-API things is... You have your own.

50:02 - 50:12

Samruddhi Mokal Outskill: let's say, a system setup or AI agent setup, which have access to your systems, and they are taking actions on your behalf, like how someone asked a previous question where I mentioned browser use and desktop use.

50:12 - 50:22

Samruddhi Mokal Outskill: So you'll need those two things to take actions, and you'll have to set up those systems on the systems of the people you're trying to create workflows for. But if you want to

50:23 - 50:28

Samruddhi Mokal Outskill: create automations on N10, etc, there is no way to connect without API keys.

50:31 - 50:34

Samruddhi Mokal Outskill: Basically, Automation Export as personal branding.

50:35 - 50:37

Samruddhi Mokal Outskill: I'll need more context about this question.

50:38 - 50:41

Samruddhi Mokal Outskill: Utsa, yes, you can go for Hicksfield as well.

50:46 - 50:52

Samruddhi Mokal Outskill: What are the costs and benefits of installing Anything locally versus using the web version?

50:52 - 50:55

Samruddhi Mokal Outskill: Also, if you're using NATN locally.

50:56 - 50:59

Samruddhi Mokal Outskill: First, going with the cost, it is free of cost.

51:00 - 51:00

Samruddhi Mokal Outskill: But...

51:01 - 51:07

Samruddhi Mokal Outskill: It is going to be... your workflows are going to work, or they are going to be live, only when your system is live.

51:08 - 51:15

Samruddhi Mokal Outskill: If you shut down your laptop, if you close your laptop, your workflows are not going to run in the background. That is one drawback.

51:16 - 51:20

Samruddhi Mokal Outskill: Second is... If you are new.

51:21 - 51:24

Samruddhi Mokal Outskill: In your cloud version, you have the Saintance AI Assistant.

51:25 - 51:27

Samruddhi Mokal Outskill: In local version, that is not there.

51:28 - 51:43

Samruddhi Mokal Outskill: So you'll have to go by yourself, configure the nodes, but if you're using AI Assistant, AI Assistant can also go and build out the nodes, or build out the workflows for you. So that is one thing. And second is, if you're stuck in something, or if you're getting a bug in something.

51:45 - 51:48

Samruddhi Mokal Outskill: Most of your time is going to go in resolving those bugs.

51:48 - 51:52

Samruddhi Mokal Outskill: And there is no way to get help if you're new to it.

51:55 - 51:57

Samruddhi Mokal Outskill: That is second. And, third is...

51:57 - 52:09

Samruddhi Mokal Outskill: The connections are a bit technical in that. Also, someone asked a question about Gmail not being connected to local NN. So that is what, again, technical setup that you will have to do on your local NN, that is

52:09 - 52:14

Samruddhi Mokal Outskill: Go through a lot of technical steps before it gets connected to different softwares.

52:15 - 52:18

Samruddhi Mokal Outskill: But in web version, you have all the...

52:18 - 52:28

Samruddhi Mokal Outskill: nodes configured, or OAuth credentials configured, you just have to click on sign in, and it will show you a pop-up asking for permissions, which is very easy. But with local and attend, that is going to get complicated.

52:28 - 52:32

Samruddhi Mokal Outskill: And another is, with local NHM.

52:32 - 52:48

Samruddhi Mokal Outskill: you might have to host it on a server so that it is up and running. Because most of the cases, what happens is, you create a workflow because you want to automate something. And if you want to automate something, you're going to stay away from your PC, or you expect it to be done when you are not present.

52:48 - 52:53

Samruddhi Mokal Outskill: And that is completely taken away if your NNN is not on a server or not hosted on a cloud.

52:59 - 53:02

Samruddhi Mokal Outskill: If I need to use Adobe for website generation.

53:03 - 53:08

Samruddhi Mokal Outskill: which AI tool will support? So Adobe has its own AI inbuilt on it.

53:08 - 53:22

Samruddhi Mokal Outskill: But personally, I wouldn't suggest Adobe for website generation. If you just want to get some creatives done with Adobe, you can get that done. For website, at this point of time, if it's a simple website, since you mentioned Adobe, I'm assuming you need a very,

53:23 - 53:33

Samruddhi Mokal Outskill: good-looking, amazing UI as compared to back-end. So if you just want a very good front-end or very amazing-looking website, stick to Lovable. Lovable generates amazing websites.

53:38 - 53:45

Samruddhi Mokal Outskill: The automation industry is evolving from traditional workflow builders, such as Aneten, Zapier, and Make.

53:45 - 53:51

Samruddhi Mokal Outskill: Towards AI Agent that can plan, reason, use tools, and execute tasks.

53:52 - 53:59

Samruddhi Mokal Outskill: Our current sessions, we are focusing every day on NN. I'm just confused. Are we investing too much of time on this platform?

53:59 - 54:01

Samruddhi Mokal Outskill: So first.

54:01 - 54:11

Samruddhi Mokal Outskill: You guys are not wasting time on this platform. At this point, whatever you are able to see on the internet, that is about AI agents can plan, reason, use tools, execute tasks.

54:11 - 54:13

Samruddhi Mokal Outskill: Those are possible.

54:13 - 54:15

Samruddhi Mokal Outskill: But there are still limitations to it.

54:16 - 54:21

Samruddhi Mokal Outskill: And, since you mentioned this, I'm sure you might have heard about something called a ZA Forward Engineer.

54:21 - 54:27

Samruddhi Mokal Outskill: And that concept was introduced, I think, two decades back by... I don't remember the name of the scientist, but

54:27 - 54:33

Samruddhi Mokal Outskill: What that AI agent is supposed to do, or what that AI forward engineer is supposed to do is, it is supposed to go

54:33 - 54:34

Samruddhi Mokal Outskill: On your behalf.

54:35 - 54:46

Samruddhi Mokal Outskill: Talk to your clients, get their requirements, define what is right, what is wrong, research about them, generate the entire plan, define the workflow, create the workflows, create the automations for them.

54:47 - 54:51

Samruddhi Mokal Outskill: But at this point, is it possible? It is not possible. First is.

54:52 - 54:55

Samruddhi Mokal Outskill: For AI agents to work, they need data.

54:55 - 54:59

Samruddhi Mokal Outskill: And at this point of time, there are a lot of companies, and

54:59 - 55:12

Samruddhi Mokal Outskill: Most of the companies are facing this issue, that is, their data is not cleaned, or that their data is not in the proper format. Without that, you cannot do anything. And even if you ask your AI agents to do that job, they will hallucinate, or they will do the wrong job for you.

55:13 - 55:15

Samruddhi Mokal Outskill: That is the main part. And second is...

55:16 - 55:18

Samruddhi Mokal Outskill: At this point of time, AI is...

55:19 - 55:23

Samruddhi Mokal Outskill: Going to that part, but it is not there yet.

55:23 - 55:26

Samruddhi Mokal Outskill: Just giving you... One example of it.

55:27 - 55:30

Samruddhi Mokal Outskill: You guys saw what is video generation, how you can create workflows.

55:31 - 55:33

Samruddhi Mokal Outskill: So if you want an AI agent.

55:33 - 55:41

Samruddhi Mokal Outskill: to go and talk on your behalf, or create an AI avatar which is talking live on your behalf, that is not possible, because that is just a...

55:41 - 55:44

Samruddhi Mokal Outskill: Drawback at this point of time, or that is a constraint?

55:45 - 55:50

Samruddhi Mokal Outskill: Because video generation takes a lot of time. That live streaming is not possible.

55:50 - 55:57

Samruddhi Mokal Outskill: So there are going to be a lot of constraints before you start going there, or it is going to take a good amount of time before you reach there.

55:57 - 56:03

Samruddhi Mokal Outskill: But if you have seen this wherever in the marketing format, that is just a way of marketing, and...

56:03 - 56:07

Samruddhi Mokal Outskill: When you go deep into this, you will see what are the challenges of doing this.

56:13 - 56:18

Samruddhi Mokal Outskill: What is the difference between anti-gravity and NATN workflows? Which is better?

56:18 - 56:26

Samruddhi Mokal Outskill: So, anti-gravity is a tool for wipe coding. N10 is a tool For creating automations or workflows.

56:27 - 56:43

Samruddhi Mokal Outskill: I think you guys might have learned what is Lovable yesterday based on one question here. So, lovable is also a white coding tool. So, anti-gravity is going to generate code for you based on your prompt, and it then is going to create a workflow for you based on what you are connected in these nodes.

56:49 - 57:09

Samruddhi Mokal Outskill: Can you suggest any AI tool for developing websites with CMS capabilities? Also, this is just, Nazeer, this is just part of Wipecoding. If you want, you can create a backend, so Lovable and Bolt or Replit, all of these have inbuilt Superbase connection available, so connect it to your Superbase as backend, and,

57:09 - 57:27

Samruddhi Mokal Outskill: In your prompt, just mention, these are the things that I want to do with this website or with this web app. And in the backend, once you give it your Subabase authentication, it will go and create all of those data tables, authentications in the background. You do not have to go and create all the data tables or your entire backend system.

57:27 - 57:33

Samruddhi Mokal Outskill: These white coding tools will do the job for you. So, based on what is the depth of your backend required.

57:34 - 57:36

Samruddhi Mokal Outskill: It will depend which tool you have to use.

57:36 - 57:38

Samruddhi Mokal Outskill: So if your backend is very simple.

57:39 - 57:42

Samruddhi Mokal Outskill: go with Lovable. If your backend needs some type of

57:43 - 57:51

Samruddhi Mokal Outskill: some decent requirement of backend, go with Bolt or Replit. If you want to create a very, very, very heavy backend, then go with

57:51 - 57:54

Samruddhi Mokal Outskill: Anti-gravity, Claude code, or cursor.

57:56 - 58:06

Samruddhi Mokal Outskill: And also, let's say by... by some reason you choose a wrong tool. Let's say you wanted a good backend, or a solid backend, but you went with Lovable. What you can do is.

58:07 - 58:09

Samruddhi Mokal Outskill: just push your lovable code to GitHub.

58:09 - 58:13

Samruddhi Mokal Outskill: pull that code, let's say I want to transfer that code to my,

58:13 - 58:33

Samruddhi Mokal Outskill: Cloud code. So I'm just going to pull that code back from my GitHub, and my entire code is going to get built on top of my pre-existing code. So do not worry, you can

start with any tool that you want, and later on, as your requirement grows, as your users start using your system, you can just change the platform and then switch to a different platform and build on top of it.

58:37 - 58:42

Samruddhi Mokal Outskill: Can you advise on which image-creating AI sites are better to use?

58:43 - 58:46

Samruddhi Mokal Outskill: Canva, or Freepik, or Lovable, or...

58:46 - 58:51

Samruddhi Mokal Outskill: Any other ones that you would suggest, especially for automation using NATM?

58:56 - 58:59

Samruddhi Mokal Outskill: So Canva is completely different. If you want to

59:00 - 59:03

Samruddhi Mokal Outskill: image-creating AI sites, if you want to just generate images.

59:04 - 59:07

Samruddhi Mokal Outskill: Check out Hicksfield, Hicksfield, or FALS AI.

59:07 - 59:10

Samruddhi Mokal Outskill: So these two are my personal go-to.

59:11 - 59:26

Samruddhi Mokal Outskill: And Canva is mostly for, deck generations or PPT generations, and Canva's AI agent, I haven't found, to that level, up to that level where you have... where you can generate images or videos on Hicksville or FAL AI.

59:27 - 59:33

Samruddhi Mokal Outskill: And lovable is not for image generation, it is for website generation.

59:41 - 59:58

Samruddhi Mokal Outskill: My company only allows Copilot Premium. What is the NN equivalent for Copilot? So since you mentioned Copilot, I'm assuming you are by default on Microsoft System. So, Microsoft has its own alternative to NN, which is called as Power Automate.

59:58 - 59:59

Samruddhi Mokal Outskill: Power Automates.

[01:00:00] - [01:00:15]

Samruddhi Mokal Outskill: interface is going to look similar, so it has its own nodes that you have to connect, and it has its own settings, and most of those settings are built for Microsoft's entire suite. So just check out Power Automate, and you'll be able to connect it, connect all of your system, Microsoft system to it.

[01:00:19] - [01:00:24]

Samruddhi Mokal Outskill: What is the difference between normal AI Agent and Autonomous Agent 1?

[01:00:25] - [01:00:41]

Samruddhi Mokal Outskill: So both of those are... the tasks are similar, but how it is triggered is different. Usually, normal AI agent, what happens is, let's take help of this workflow, okay? So imagine there is an AI agent node here. What happens is, you tell it what to do, but it has a dynamic way of

[01:00:42] - [01:01:00]

Samruddhi Mokal Outskill: figuring out things. But autonomous is, by default, everything that AI Agent is on, by default, it knows, okay, if something happens, then it has to do this, if something happens, so the trigger is different. Autonomous is, it's completely autonomous, it is live all the time, it knows when to do what, based on different situations. AI Agent is, you trigger it when required.

[01:01:06] - [01:01:09]

Samruddhi Mokal Outskill: Can you please advise the best tools for...

[01:01:09] - [01:01:14]

Samruddhi Mokal Outskill: First, voice cloning. Second, video cloning. Third, researching.

[01:01:15] - [01:01:16]

Samruddhi Mokal Outskill: Okay.

[01:01:16] - [01:01:19]

Samruddhi Mokal Outskill: First, voice cloning, stick to 11 labs.

[01:01:20] - [01:01:23]

Samruddhi Mokal Outskill: Second, for video cloning, stick to HeyGen.

[01:01:25] - [01:01:28]

Samruddhi Mokal Outskill: And third, researching. At this point of time, I'll suggest perplexity.

[01:01:30] - [01:01:46]

Samruddhi Mokal Outskill: If Perplexity is not doing the job, so Perplexity cannot, by default, go and scrape different websites, Perplexity has the ability to do web research. But let's say if you want to scrape someone's social media, then I'll suggest going for Appify. I'll show Appify's interface.

[01:01:51] - [01:01:59]

Samruddhi Mokal Outskill: Abhi... So, Appify is a marketplace of scrapers. It has, around these many scrapers available.

[01:01:59] - [01:02:04]

Samruddhi Mokal Outskill: And in Appify, scrapers are called as actors, so do not get confused what does actor mean.

[01:02:05] - [01:02:08]

Samruddhi Mokal Outskill: Let's say I just want to search for Instagram.

[01:02:11] - [01:02:19]

Samruddhi Mokal Outskill: So if I search for Instagram, I'll be able to find a lot of different scrapers only for Instagram. How to choose the best scraper in this is...

[01:02:20] - [01:02:21]

Samruddhi Mokal Outskill: Two things.

[01:02:22] - [01:02:25]

Samruddhi Mokal Outskill: You'll be able to find the rating and how many people are using it.

[01:02:25] - [01:02:38]

Samruddhi Mokal Outskill: So just see how many people... the most number of ratings and the most maximum users. So use that scraper so that you know, okay, this is the right scraper for you, because a lot of people are using, and that is just a good way to review which one to choose in the marketplace.

[01:02:38] - [01:02:40]

Samruddhi Mokal Outskill: That is one.

[01:02:40] - [01:02:45]

Samruddhi Mokal Outskill: Second is, if you want to take certain actions on behalf of you.

[01:02:46] - [01:02:48]

Samruddhi Mokal Outskill: For example, let's say you want to download something.

[01:02:49] - [01:02:58]

Samruddhi Mokal Outskill: In that case, this scraper might not be able to do the job. Your appifier might not be able to do the job. What you can do is, you can search for browser app.

[01:03:01] - [01:03:04]

Samruddhi Mokal Outskill: Yeah. So, browser act is,

[01:03:05] - [01:03:15]

Samruddhi Mokal Outskill: NATM for scrapers. So you can create your own mini scraper automations on BrowserAct and start using those automations for different websites or different platforms that you want.

[01:03:20] - [01:03:32]

Samruddhi Mokal Outskill: Yeah, and yeah, one more thing. If you're using any social media automations on Appify, or social media scrapers on Appify, always keep in mind, use those scrapers which do not use cookies.

[01:03:33] - [01:03:36]

Samruddhi Mokal Outskill: Reason being, If you have cookies.

[01:03:36] - [01:03:40]

Samruddhi Mokal Outskill: It is going to... there are chances it might block your accounts.

[01:03:41] - [01:03:47]

Samruddhi Mokal Outskill: So make sure your cookies are not getting stored by the scrapers, so that you are also safe if you are scraping huge amount of data.

[01:03:51] - [01:04:00]

Samruddhi Mokal Outskill: What are the best ways to put these together and automate the process of researching to create a video using clone and then posting them on social media?

[01:04:01] - [01:04:06]

Samruddhi Mokal Outskill: Okay, I'll show a workflow about marketing on my NHN. You can create similar workflow.

[01:04:09] - [01:04:10]

Samruddhi Mokal Outskill: Okay...

[01:04:14] - [01:04:16]

Samruddhi Mokal Outskill: Amia, I lost audio. Guys, am I audible?

[01:04:19] - [01:04:22]

Samruddhi Mokal Outskill: I hope I'm okay, I'm ordering, perfect.

[01:04:26] - [01:04:41]

Samruddhi Mokal Outskill: Also, this is one video generation workflow. First is, this is a research agent which does all of the researching and adds all of the ideas in a Google Sheet. That is content idea generation. Then, this is video generation. In video generation, what you need is three things.

[01:04:43] - [01:04:47]

Samruddhi Mokal Outskill: In case of your clone, you do not have to generate images, but if you're

[01:04:47] - [01:04:50]

Samruddhi Mokal Outskill: Clone is not there, this is going to be your format.

[01:04:50] - [01:04:58]

Samruddhi Mokal Outskill: So, first is... You extract the rows from your Google Sheet, Then you generate the titles.

[01:04:59] - [01:05:03]

Samruddhi Mokal Outskill: Then you generate the prompts, which are going to get passed

[01:05:03] - [01:05:10]

Samruddhi Mokal Outskill: to your image generation, video generation, and audio generation AI agents, or models.

[01:05:10] - [01:05:18]

Samruddhi Mokal Outskill: So, first is, you generate the image, you generate the video, you generate the sound, and then you will merge all of these three.

[01:05:18] - [01:05:34]

Samruddhi Mokal Outskill: and render the video. So the process of merging this is called rendering. So you have to select the right rendering platform. This is called as CreatOMate, the

rendering one that I am using in this one. Once this is rendered, you will get the final video link, and you can then publish it on whatever platform that you want.

[01:05:35] - [01:05:39]

Samruddhi Mokal Outskill: And this is for image generation or social media posting, which is similar, like.

[01:05:40] - [01:05:42]

Samruddhi Mokal Outskill: You first generate the image prompt.

[01:05:42] - [01:05:49]

Samruddhi Mokal Outskill: Generate the image, and in this first main agent only, you generate the text of your post that you're generating.

[01:05:50] - [01:05:56]

Samruddhi Mokal Outskill: This is for your clone one, which is Haigen. This is connected to Hygen, so...

[01:05:56] - [01:06:07]

Samruddhi Mokal Outskill: This is going to get your voice as well as your video, because you're using Heijen, so that is going to get your entire clone, and going to generate the video on this.

[01:06:07] - [01:06:16]

Samruddhi Mokal Outskill: This is SEO, okay, so this is not part of it. Alright, we have a good number of questions left, so we'll take all of those questions tomorrow.

[01:06:17] - [01:06:19]

Samruddhi Mokal Outskill: I'll hand it over to Sumedha from here.

[01:06:19] - [01:06:31]

Sumedha: Thank you so much, Samrati. Thank you so much for this amazing, insightful session. So, with that, I'll let you go have some rest, and we will again see you tomorrow. Thank you so much for taking this up.

[01:06:32] - [01:06:48]

Sumedha: Alright, so thank you so much for everyone, for attending the session. I hope you found this insightful. So, also, I saw a couple of questions around the recordings, which I would quickly answer before we end this session.

[01:06:48] - [01:06:58]

Sumedha: So, as you know, the sessions are running a little longer, so Zoom also takes longer period of time to return the, like, recordings to us.

[01:06:58] - [01:07:16]

Sumedha: with the files, so the team does a QC post that, and then the recordings are uploaded in the LMS. So, I hope you can just bear with it. Yeah. With that, I will also mention this to the team. We will try to upload it as soon as possible.

[01:07:16] - [01:07:18]

Sumedha: Alright.

[01:07:19] - [01:07:30]

Sumedha: See, whatever, workflow she can share, she will definitely share it with all of us, but please understand, she also charges for these workflows.

[01:07:30] - [01:07:47]

Sumedha: So, she cannot share each and every workflow, so I would suggest rather you learn how to do it, and you can do it, and if you come across any queries, you can put it up to us, and we will help you with it, right? And I will check with her in case if it is possible, she will definitely share it.

[01:07:47] - [01:07:48]

Sumedha: Alright.

[01:07:50] - [01:07:58]

Sumedha: So Zoom doesn't allow us to record any of the breakout rooms. That is a restriction from Zoom's,

[01:07:58] - [01:08:17]

Sumedha: application, and it's a policy from them that we can all also use any third-party tool to record the breakout rooms, because of exactly which we try to give you the recordings of how to solve the workbook. So, I hope that will be helpful. We shouldn't trespass anything that is already a policy, right? That's why.

[01:08:23] - [01:08:28]

Sumedha: There is no workbook today. We will have Q&A in the breakout rooms.

[01:08:28] - [01:08:35]

Sumedha: Alright, with that, I will let you go, have some rest, have a quick coffee, or have some... just...

[01:08:35] - [01:08:53]

Sumedha: walk around a bit, and come back for the main session. So, we will have the main session with Dilip today at 7.35pm. We will start sharp at 7.35pm, so please do not be late, and join in on time. Thank you so much for joining in.
