

Day 10 Office Hours Session

03:46 - 08:18

Audio shared by Sumedha: [Pre-session music played; lyrics not transcribed.]

10:43 - 10:57

Sumedha: Hello, everyone. Welcome back to Day 10 of AI Accelerator. Warm, warm welcome to the session. Very good morning, good evening, good afternoon from wherever you are joining in. How are you guys doing?

10:57 - 11:02

Sumedha: I'm doing well, thank you so much for asking. How are you doing?

11:04 - 11:08

Sumedha: Sound and video is clear. Alright, perfect.

11:10 - 11:15

Sumedha: Surviving? Okay, yeah, makes sense. I can understand that.

11:16 - 11:21

Sumedha: Great, good, all good? Yeah, good, okay, alright.

11:22 - 11:29

Sumedha: Perfect! So, are we ready to get started for the session today? Are we ready to get started?

11:33 - 11:43

Sumedha: Yes, all right, perfect. With that, without any further ado, you know the drill. I'll quickly drop the Slido link in the chat. There you go.

11:43 - 11:59

Sumedha: Just a second here. There is the Slido link in the chat. The Q&A is open. We will start with taking the questions on popularity basis, and once again, with us, we have Samrati. So, welcome back, Samrati, and I'll leave the session over to you.

12:00 - 12:02

Samruddhi Mokal Outskill: Hello, everyone.

12:02 - 12:07

Samruddhi Mokal Outskill: I'll quickly share the screen, and we'll get started with the Q&A.

12:09 - 12:11

Samruddhi Mokal Outskill: Alright, I hope my screen is visible.

12:13 - 12:14

Samruddhi Mokal Outskill: Okay, perfect.

12:17 - 12:18

Samruddhi Mokal Outskill: Okay.

12:22 - 12:28

Samruddhi Mokal Outskill: So, how can I add the final lovable design to my live website, or

12:29 - 12:44

Samruddhi Mokal Outskill: If I have created an AI agent in Anaten, how can I integrate it into my live website? So, both of these are two separate questions, and both of these need separate approaches. Starting with the first one, how to add your lovable design to your live website.

12:44 - 12:49

Samruddhi Mokal Outskill: So, only thing that you need to connect is your domain.

12:49 - 13:09

Samruddhi Mokal Outskill: So your live website is going to have a certain domain, that domain you have to connect to your lovable design. How to connect that is, from wherever you purchase that domain, whether it's Hostinger, GoDaddy, NameChip, etc, etc, or whatever platform you're getting that domain from, go to that Manage Settings of your domain, and find DNS records.

13:10 - 13:15

Samruddhi Mokal Outskill: So, DNS records has a value that you have to paste in your Loverbuild when you publish it.

13:15 - 13:24

Samruddhi Mokal Outskill: So when you publish LoverBell, you'll be getting one option called as, do you want to add your custom domain? When you click on that, it is going to ask you your DNS records.

13:24 - 13:28

Samruddhi Mokal Outskill: So think of DNS record like, how you get your API keys, right?

13:28 - 13:37

Samruddhi Mokal Outskill: So, similarly, you can get your DNS records, which is unique to your website, so get that DNS record, add it to your lovable, and it will get connected to your domain.

13:38 - 13:45

Samruddhi Mokal Outskill: So that is first. Second is, if you have created an AI agent in Ann, how to integrate with live website?

13:49 - 13:56

Samruddhi Mokal Outskill: So whenever you're getting any data from live websites, the best approach is create webbooks.

14:02 - 14:02

Samruddhi Mokal Outskill: Yep.

14:03 - 14:07

Samruddhi Mokal Outskill: So, ignore the middle workflow, just look at the first node and the last node.

14:08 - 14:10

Samruddhi Mokal Outskill: So, when you want to connect a front-end.

14:11 - 14:29

Samruddhi Mokal Outskill: your workflow always starts with webhook node. So what you do is you configure this webhook node in your website. In white coding itself, you can tell your lovable itself that I want to configure this webhook through which you are going to send XYZ type of data when users interact on my website, and then respond to webhook is

14:30 - 14:41

Samruddhi Mokal Outskill: If you want to pass on the output of this data back to your website, so you want to show what is the output, so let's say if you're creating a chatbot, someone asks a question, a user asks a question.

14:42 - 14:54

Samruddhi Mokal Outskill: It is received through your webhook. This AI agent processes it, so this is a RAC system. AI agent processes it, and gives the output, and respond to webhook is going to show that output back on my website.

14:56 - 15:06

Samruddhi Mokal Outskill: And if you, let's say, if you do not want to show that data, you just want to store whatever is happening in your website in the backend, then you do not need respond to webhook. It is only required when you want to show back the output again.

15:11 - 15:27

Samruddhi Mokal Outskill: Is there a marketplace for NN models that can be reused or customized, as opposed to building them from scratch? Also, I'm assuming that is nit and workflow, so model is a very different term, but coming to NN workflows, yes, there is a good library of templates.

15:27 - 15:40

Samruddhi Mokal Outskill: So, yes. So, this is NN's official website, which, from where you're going to find these many... around 12.5K templates or automations already built. So you can filter them out based on different,

15:40 - 15:52

Samruddhi Mokal Outskill: roles that you want, different softwares that you are using, so just type it out in the search bar, and you'll be able to find a lot of different workflows that are already there. You can start building on top of these. I'll share the link of it in the chat.

15:54 - 15:57

Samruddhi Mokal Outskill: So, here's the link of Annet and Workflows.

16:04 - 16:17

Samruddhi Mokal Outskill: Yesterday, I sent it in workbook. At the end. I used AI Assistant, but could not resolve the issue, or what to do. Is there any way the mastermind and bootcamp session, is it possible to use voice agent and

16:17 - 16:34

Samruddhi Mokal Outskill: some other easier way to complete the workflow. So, voice agent is a very different thing. I'm not sure if you are looking for adding your voice command to your Jerry, but if you're adding voice command to your Jerry, you need to have a platform which is going to accept your voice commands, whether it's WhatsApp, or Telegram or

16:35 - 16:41

Samruddhi Mokal Outskill: any platform which takes voice commands as inputs, or audio inputs. Once you have that.

16:46 - 16:48

Samruddhi Mokal Outskill: Let me show what... to do.

16:52 - 16:53

Samruddhi Mokal Outskill: Okay.

16:54 - 16:57

Samruddhi Mokal Outskill: Alright, this does not have audio 1.

17:05 - 17:08

Samruddhi Mokal Outskill: Yeah, so it will look something like this.

17:08 - 17:18

Samruddhi Mokal Outskill: As soon as you get a message from the platform, you're going to define what type of message it is, whether it's text, whether it's image, whether it's voice or audio, and then you can

17:18 - 17:26

Samruddhi Mokal Outskill: Once you get that message, you have to download that audio, transcribe that audio, and then pass it on further to your AI agent. Reason being.

17:26 - 17:39

Samruddhi Mokal Outskill: If you directly pass on the audio, AI models are built to analyze the audio as well, but they cost way higher. So what we do is, the best practice is convert this audio into a text, and then pass it on to your AI agent.

17:49 - 17:55

Samruddhi Mokal Outskill: And another is, if you're not... if your NHNZ assistant is not able to do, what I do is, I just...

17:56 - 18:00

Samruddhi Mokal Outskill: get the JSON files, and put it on my cloud, and it does that job for me.

18:02 - 18:16

Samruddhi Mokal Outskill: How does one upload a PDF in Markdown format? Also, there are a lot of free tools. If you just type out in Chrome or a normal Google, PDF to Markdown Converter, you can upload those files and get the files converted. It's a pretty simple process.

18:21 - 18:33

Samruddhi Mokal Outskill: I was trying to integrate cursor to Big Bucket, but was not able to do. Please help steps. So, if I'm not able to connect something, this is what I do. Go to Claude, go to Claude's desktop version.

18:33 - 18:45

Samruddhi Mokal Outskill: ask it to use your desktop. It has the ability to use your desktop. It will analyze the step, it will do the research, what is happening. Like, a lot of people might have said in the communities if they are facing specific type of errors, and it will

18:46 - 18:50

Samruddhi Mokal Outskill: After doing the research, it will take the right actions for you, so that is what I'll suggest.

18:52 - 19:02

Samruddhi Mokal Outskill: Is Anand compatible with design softwares like AutoCAD, Revit, etc? In general, how does processes in design softwares be automated?

19:02 - 19:13

Samruddhi Mokal Outskill: So, coming to NN, I personally haven't created any workflows on AutoCAD, etc, but what I've seen is AutoCAD or Revit, etc, these design softwares.

19:13 - 19:27

Samruddhi Mokal Outskill: have their own AI capabilities that they are introducing. The main challenge, what happens with these is the file sizes are very large, which NATN, or even if you upload those files to Claude or ChatGPT, they're not able to process. So they are going to be .dmj type of files.

19:27 - 19:33

Samruddhi Mokal Outskill: And it gets very tough, to analyze these files, in most cases, what they do is.

19:34 - 19:38

Samruddhi Mokal Outskill: Even if you're creating images in the background, they convert them into, let's say.

19:39 - 19:43

Samruddhi Mokal Outskill: a type of code which is easier for your AI to understand.

19:44 - 19:48

Samruddhi Mokal Outskill: Because what you're going to do is, in design, there are going to be a lot of lines there.

19:49 - 20:11

Samruddhi Mokal Outskill: So it is tough to see what is the differentiation between one line versus the second line, which gets confusing for normal AI models. So they convert that image, or that geometry, into a code, and then they analyze it into using AI models. So that is one step, or one layer that these models are. If you can add that layer on top of it, then you can try it out in as well.

20:14 - 20:32

Samruddhi Mokal Outskill: You spoke about creating custom GPTs to give access of RAC project to a few people with the link. Can you suggest on how we can get started, some guidance so that we can explore at our end? So when you go to ChatGPT, you'll be able to find something called as custom GPTs.

20:32 - 20:49

Samruddhi Mokal Outskill: So there are three sections, custom GPTs, projects, and Normal Chat. So, go to Custom GPTs. Custom GPTs is available, I think, only on the paid plan, so you'll have to check if it is available on the free plan as well or not. But go to Custom GPTs. How you create a project? Similarly, give a name to your Custom GPT,

20:49 - 21:06

Samruddhi Mokal Outskill: Attach the files as resources, and if you want to add a specific type of prompt or instructions that it has to act in a specific way, add that prompt and share that

link. When you publish it, it will ask you, do you want to keep it completely private, do you want to keep it with anyone with the link, or do you want to publish it on

21:07 - 21:09

Samruddhi Mokal Outskill: your entire website of ChatGPT.

21:10 - 21:13

Samruddhi Mokal Outskill: And then you can select the right one and share the link with others.

21:16 - 21:18

Samruddhi Mokal Outskill: Can AI of NHN

21:18 - 21:26

Samruddhi Mokal Outskill: Create a workflow, it's simple language, as it has the ability to edit. Yes, definitely, and it ends AI can create the workflow as well for you.

21:32 - 21:34

Samruddhi Mokal Outskill: I want educational videos.

21:35 - 21:51

Samruddhi Mokal Outskill: For customers, need to find all data online. I have basic pointers and content. The video should have animation, should seem like real, with human beings, audio convertible to 5-6 Indian languages and English with subtitles.

21:51 - 21:56

Samruddhi Mokal Outskill: Which platform to use? Can you help design a prompt? Also, Dhan, this is going to be a very...

21:56 - 22:01

Samruddhi Mokal Outskill: long process. So I showed a marketing workflow yesterday, so you'll have to follow a similar approach.

22:01 - 22:09

Samruddhi Mokal Outskill: So just the models that you're going to use, like, for example, if you're using voice, since you mentioned Indian languages, I'll suggest going with

22:10 - 22:14

Samruddhi Mokal Outskill: 11 labs and getting a voice that is good for Indian languages.

22:16 - 22:17

Samruddhi Mokal Outskill: Marketing...

22:22 - 22:24

Samruddhi Mokal Outskill: Alright.

22:24 - 22:28

Samruddhi Mokal Outskill: I have a lot of workflows which is getting confusing to pull up the right one.

22:32 - 22:36

Samruddhi Mokal Outskill: Yeah, this is also a similar one, let's stick to this.

22:38 - 22:41

Samruddhi Mokal Outskill: So this is what your overall workflow will look like.

22:43 - 22:45

Samruddhi Mokal Outskill: You will first generate the images.

22:47 - 22:55

Samruddhi Mokal Outskill: And for generating the images or videos, you first need to generate the prompts, which further gets passed on to your generate images or generate video module.

22:55 - 23:00

Samruddhi Mokal Outskill: Once you pass it on, You also have to generate a sound.

23:00 - 23:15

Samruddhi Mokal Outskill: If... there are certain models which can generate all of these three for you, including images, videos, and audio, but just the costing of these models is going to be higher, so you have to decide if you want to cut down on the cost, if you just want to simplify this workflow and stick to one model, which will generate all of these three for you.

23:16 - 23:22

Samruddhi Mokal Outskill: Let's say if you're taking this approach, then you have to render this video. Rendering is, you're combining all of these three.

23:22 - 23:26

Samruddhi Mokal Outskill: Once you render the video, you can download the video, and you can publish it.

23:36 - 23:46

Samruddhi Mokal Outskill: Can you download a JSON for work-in-progress N10 flows? That is, the flow is not published. Yes, definitely, you can download any type of JSON, even if it is published or not published.

23:46 - 23:53

Samruddhi Mokal Outskill: So just go through these three dots, click on download, and download or export. It will download the JSON, and you can share it with others.

24:00 - 24:04

Samruddhi Mokal Outskill: What would be the best harness, combination of connectors and plugins?

24:05 - 24:24

Samruddhi Mokal Outskill: for Claude desktop, for Wipe Coding web apps, can you give us a list of best connectors and plugins? So being honest, if you're going with Claude for VIP Coding, you do not need connectors or plugins. Claude has its own code version, right? So you can just switch to Claude code, do not use any connectors or plugins. Just stick to Claude code.

24:24 - 24:39

Samruddhi Mokal Outskill: Cloud Code is available in Terminal as well as in your desktop app. Simply switch to chat and code. In code, you can normally chat with it. It will create a very good code for you. And it also has browser use and desktop use, so

24:39 - 24:53

Samruddhi Mokal Outskill: It does its own testing. In the backend, you can start doing any other work that you want, give it a prompt, it will automatically create a separate tab in your browser, it will take over that tab. It will do all of that debugging that is required, and it will give you the final output.

24:59 - 25:03

Samruddhi Mokal Outskill: Dilip was speaking about MIT license and GPL license.

25:03 - 25:17

Samruddhi Mokal Outskill: when... when we make products, agent or softwares, where should we search for the type of license, or it's only for models? Also, it depends. Most... if you're seeing GitHub repositories, all of these GitHub repositories by default have MIT license.

25:17 - 25:27

Samruddhi Mokal Outskill: or by default, have a license. There can be multiple types of licenses, whether it's GP or MIT, but just search on the product's websites, those are available, all of these licenses, and

25:28 - 25:31

Samruddhi Mokal Outskill: The entire information is available on the website itself.

25:36 - 25:49

Samruddhi Mokal Outskill: What is the accuracy of the analysis done by AI tools like PEC, AI, Right, Sonic, Profound, SEMrush, etc? So honestly, these AI tools are very specific to a specific task that you're mentioning.

25:50 - 25:57

Samruddhi Mokal Outskill: The accuracy of this depends on the type of search that you're doing. For example, if you're going with SEMrush.

25:58 - 26:11

Samruddhi Mokal Outskill: You're going to be doing, let's say, you're doing some keyword analysis, or some other type of analysis. So your strategy matters. These tools are built to do a specific job, but your prompt defines what that job is going to be done.

26:11 - 26:21

Samruddhi Mokal Outskill: So by default, you have to decide what your strategy is going to be, and only then these tools are going to be helpful, whether it's Claude, whether it's any of these tools, whether it's Annet. Without your

26:21 - 26:24

Samruddhi Mokal Outskill: Process, or without you telling them

26:24 - 26:28

Samruddhi Mokal Outskill: What strategy you want or what output you want, these tools won't do the job for you.

26:31 - 26:49

Samruddhi Mokal Outskill: My concern is that by connecting my various tools, like Gmail, Slack, Asana, etc, which contain sensitive company data, or just my pers- my own personal data to Claude or ChatGPT, I worry about data leakage or privacy concerns. Can you address these concerns, or I'm being overly concerned about privacy?

26:49 - 26:51

Samruddhi Mokal Outskill: So, first.

26:51 - 27:06

Samruddhi Mokal Outskill: addressing this concern, by default, connecting these apps does not mean that it can access that information. Just giving you an example about NAT and workflow, let's say I have connected my Gmail node, let's go to Jerry.

27:09 - 27:14

Samruddhi Mokal Outskill: So I connected a lot of different tools to my Jerry, and my Jerry has access to my entire Gmail and calendar.

27:14 - 27:21

Samruddhi Mokal Outskill: But... Just giving authentication or doing the sign-in does not mean it is going to read that information.

27:21 - 27:33

Samruddhi Mokal Outskill: Only when I trigger this workflow, only then it is going to read that specific type of information. For example, if I ask it, can you give my last 5 emails?

27:34 - 27:43

Samruddhi Mokal Outskill: In that case, what this Master Orchestrator is going to do is, it will go specifically to email agent, and in that also, it will just trigger this specific tool that is get many messages.

27:44 - 27:53

Samruddhi Mokal Outskill: In that case, it will read only this, or it... it will only read the messages, it does not do rest of the things. And it will only read the last 5 messages.

27:53 - 28:03

Samruddhi Mokal Outskill: So by default, giving permission does not mean it is going to take actions, or it does that in the background. Only when you execute it, only when you trigger it, only then it does that.

28:03 - 28:19

Samruddhi Mokal Outskill: Similarly for Claude or ChatGPT as well, only when you prompt it to use that tool, and in that tool also, you have a lot of... in that connector also, you have a lot of tools. So which tool it is using, only that type of data it is going to get for that specific prompt.

28:23 - 28:27

Samruddhi Mokal Outskill: And you do not have to worry about data leakage or privacy, etc, don't worry about it.

28:29 - 28:30

Samruddhi Mokal Outskill: Prem...

28:31 - 28:47

Samruddhi Mokal Outskill: Yesterday you mentioned you will share the YouTube link for NHN setup to connect... to connectors in local. Yes, guys, I'll share that with, Sumedha, don't worry about it, I'll share that. And also, I'm creating a complete resource guide, where whatever tools I have mentioned, whatever GitHub repositories, etc, whatever I'm mentioning in these sessions.

28:47 - 28:55

Samruddhi Mokal Outskill: I'll share it, everything on that entire website, where you can go and search whatever I have shared.

28:56 - 28:59

Samruddhi Mokal Outskill: I'll try to do it by the end of this week, so... yeah.

29:01 - 29:11

Samruddhi Mokal Outskill: Can you use desktop version of Claude or ChatGPT to access our device and observe and study our office works for a few days to understand our work on Excel or Gmail?

29:11 - 29:20

Samruddhi Mokal Outskill: Gmail writing, or other official works, and develop a skill to automate and standardize works? What is the best practice? How to action this?

29:21 - 29:25

Samruddhi Mokal Outskill: So yes, you can do. Answering your first question, can you do that?

29:25 - 29:27

Samruddhi Mokal Outskill: Yes, you can do that, you can give it

29:28 - 29:31

Samruddhi Mokal Outskill: Access to your desktop or access to your browser, as I mentioned.

29:32 - 29:41

Samruddhi Mokal Outskill: It will analyze everything that you want, but don't confuse it. Like, how you saw yesterday, how in Grogbot, we created multiple bots for

29:41 - 29:46

Samruddhi Mokal Outskill: specific type of role. Similarly, create separate skills

29:46 - 29:52

Samruddhi Mokal Outskill: For specific type of roles, for example, one to work on Excel, another to do email writing.

29:52 - 29:58

Samruddhi Mokal Outskill: So, whatever jobs you have, Keep separate skills so that it does not get confused.

29:58 - 30:09

Samruddhi Mokal Outskill: And have one master skill, which is going to, like how we created a chief of staff bot, similarly have a master skill that is going to further recheck their task, or delegate their tasks, or activate the right skills.

30:14 - 30:20

Samruddhi Mokal Outskill: Please show a live example to find the license and identify the type. Alright, let up... let's go to,

30:21 - 30:26

Samruddhi Mokal Outskill: GitHub repo, Let's try Annet in GitHub.

30:38 - 30:42

Samruddhi Mokal Outskill: So if you scroll down, you'll be able to find the licensing part somewhere here.

30:42 - 31:00

Samruddhi Mokal Outskill: Yeah, so everywhere the license is mentioned, in this case, this is Enterprise License, you can search for... if you go on this, it will tell what type of license it is. So there are links that they are going to provide. If you go to this, it will give you what type of exact license it is. MIT, GPL, etc, etc. And all of these repositories are going to have

31:01 - 31:03

Samruddhi Mokal Outskill: A documentation where they will mention it.

31:10 - 31:20

Samruddhi Mokal Outskill: how to publish and pull codes from one platform to other through GitHub. Can you please show a demo of it? So today, you guys are going to learn anti-gravity and how to use your,

31:21 - 31:23

Samruddhi Mokal Outskill: GitHub, etc, but...

31:23 - 31:42

Samruddhi Mokal Outskill: what you mentioned here, push and pull, these are the exact commands that you will have to use. So, push, git, and you'll be going to have a repository name, so you'll have to create a repository on your GitHub, add that repository URL. The code will automatically get pushed to your GitHub, so it is just one command. Push, and second is going to be pull.

31:42 - 31:50

Samruddhi Mokal Outskill: Pull this for getting the code that you already have on GitHub, and push is to push the code that you have created on your anti-gravity Claude code, etc.

31:54 - 32:11

Samruddhi Mokal Outskill: I noticed that Annet and Zapier are competitors. Some mentioned that Zapier is good. Can you help us to guide by sharing pros and cons of each? Oh, thanks. Yeah, sure. So, Zapier, at this point of time, is good because it has very specific nodes, and people are using Zapier

32:12 - 32:22

Samruddhi Mokal Outskill: Because those nodes are there, and they do not require anything else. Anytime, at this point of time, is the most customized automation platform out there in the market.

32:23 - 32:25

Samruddhi Mokal Outskill: That is first. Second is...

32:26 - 32:40

Samruddhi Mokal Outskill: At this point of time, there is no other automation platform which you can download locally. So if you have some clients which have security-related issues, you... your only option is NN, because you're going to be hosting NN on their servers.

32:40 - 32:52

Samruddhi Mokal Outskill: So that is the second part. Zapier has limited notes. Zapier does not have as much customization as possible as NN, so that is, that is my take on this. So if you want to

32:52 - 33:05

Samruddhi Mokal Outskill: start with Zapier, and if Zapier is doing the job for you, stick to Zapier. If you think that nitn is required because of these two reasons, if Zapier is not doing the job, then you can switch to NN. So there is no hard and fast rule that

33:05 - 33:19

Samruddhi Mokal Outskill: you have to use this platform only, or that platform only. Just make sure your work gets done by AI, that is the main purpose of learning AI. Just get the job done in the fastest and easiest possible way. Any tool, if... whatever is doing the job, stick to that.

33:23 - 33:27

Samruddhi Mokal Outskill: Can you explain once again your flow of video generation?

33:27 - 33:30

Samruddhi Mokal Outskill: What is permanent approx cost for generating?

33:31 - 33:34

Samruddhi Mokal Outskill: Alright, this is Jerry.

33:35 - 33:36

Samruddhi Mokal Outskill: Going back to...

33:44 - 33:47

Samruddhi Mokal Outskill: Yes, so this is video generation workflow.

33:50 - 33:59

Samruddhi Mokal Outskill: So first is, you have to generate the titles. So before that, I have added one more workflow, which is generating the topics based on which these videos are getting created.

33:59 - 34:07

Samruddhi Mokal Outskill: So it fetches the topics from this Google Sheet, it generates the titles for these videos, and then it generates the prompts.

34:08 - 34:13

Samruddhi Mokal Outskill: It generates the prompts for 3 things, that is generate images, generate videos, and generate sounds.

34:13 - 34:22

Samruddhi Mokal Outskill: Once this is passed, all these three are created, you merge these three, and render the video so all of these three are merged properly.

34:23 - 34:30

Samruddhi Mokal Outskill: And then you get a final video link from the rendering platform, and then you can publish or download that video, and later on publish to whatever platforms you want.

34:30 - 34:33

Samruddhi Mokal Outskill: And coming to the cost of it, that is a very...

34:34 - 34:38

Samruddhi Mokal Outskill: it depends, like, if I give you one cost, if you're using a different model, the...

34:39 - 34:43

Samruddhi Mokal Outskill: Variance is going to be 100x, so what I'll suggest is go to FAL AI,

34:49 - 34:54

Samruddhi Mokal Outskill: In File AI, you'll be able to find all of the models that are there, and for each model.

34:54 - 34:57

Samruddhi Mokal Outskill: What is the costing per minute?

34:59 - 35:02

Samruddhi Mokal Outskill: Once you log in, you'll be able to find different models.

35:14 - 35:15

Samruddhi Mokal Outskill: All right.

35:21 - 35:25

Samruddhi Mokal Outskill: So let's go to Explore. So if I go to Explore, you'll be able to see what are the newest models.

35:26 - 35:32

Samruddhi Mokal Outskill: Generate 3D models, generate music, remove background, upscale.
If you want to train something, try clothing.

35:32 - 35:35

Samruddhi Mokal Outskill: These are the recently added models.

35:35 - 35:41

Samruddhi Mokal Outskill: model labs, So you can go to this Explorer, and when I open this, each of this.

35:42 - 35:44

Samruddhi Mokal Outskill: I can test it out in mine.

35:44 - 35:53

Samruddhi Mokal Outskill: FAL AI's platform itself, so you do not have to directly connect using the API. For each of this model, you have playground API examples, requests, and analytics.

35:54 - 36:02

Samruddhi Mokal Outskill: So, try it out in the playground itself, you can switch through resolution, duration, everything, and you'll be able to find the cost just below this.

36:03 - 36:16

Samruddhi Mokal Outskill: So whatever model you open, this interface is going to be similar. You are going to have a playground at this part of your file, and you're going to have the output here. And just below your output, you can find what is the cost of it per second, per minute, based on the models that are there.

36:22 - 36:31

Samruddhi Mokal Outskill: Good... good day, whoever has said this, and what feedback and tips do you have about workflow planning and architecture? I'm looking to active multiple workflows.

36:32 - 36:40

Samruddhi Mokal Outskill: Do I build 10 independent workflows, or do I combine all actions into one workflow? How do we prioritize what goes first and how to start?

36:41 - 36:46

Samruddhi Mokal Outskill: So, before thinking about workflows, Always think about the process.

36:47 - 36:50

Samruddhi Mokal Outskill: Get your process mapped in a flowchart.

36:51 - 37:03

Samruddhi Mokal Outskill: If you think that mapping your process in one flowchart is very complicated, do not go with one flowchart. Create multiple flowcharts, have an orchestrator workflow that is going to trigger the rest of the workflows.

37:05 - 37:22

Samruddhi Mokal Outskill: If you want 10 independent workflows, or if you want one single workflow, that will depend on the process. But since you mentioned 10, that is a pretty high number, so I'm assuming you are going to need an orchestator workflow, which pulls the rest of the workflows depending on the action that you have to take.

37:22 - 37:28

Samruddhi Mokal Outskill: And map out the architecture accordingly, like, how many workflows are required for what type of action.

37:28 - 37:34

Samruddhi Mokal Outskill: I'll give you an example. For example, Jerry. So, Jerry had one calendar agent, one email agent, one,

37:34 - 37:35

Samruddhi Mokal Outskill: Meetings agent.

37:36 - 37:40

Samruddhi Mokal Outskill: That is one... one way to do that. Another was the Jarvis.

37:44 - 37:45

Samruddhi Mokal Outskill: So this is,

37:46 - 37:56

Samruddhi Mokal Outskill: totally 1, 2, 3, 4, 5, 6. So this is 6 separate workflows working together, and this is the master workflow, which is triggering each of these workflows in the background.

37:58 - 38:03

Samruddhi Mokal Outskill: So right now, this is as part of MCP, but it also has NHN also has

38:04 - 38:08

Samruddhi Mokal Outskill: execute another natin workflow as part of the tool, or as part of the trigger as well.

38:09 - 38:17

Samruddhi Mokal Outskill: So use that node if you do not... if the workflow is not required to have MCPs, use that node and have an architecture similar to this.

38:18 - 38:24

Samruddhi Mokal Outskill: One master workflow, separate workflows for separate tasks or separate processes, which are going to get triggered when required.

38:30 - 38:48

Samruddhi Mokal Outskill: From your vast NN experience, may I know the best practice about monetizing NHN workflow automation service? Let's say, as a managed service model, is that a monthly subscription model? Is Anaten subscription under customer name, or we use our own NATN infrastructure? Okay, so giving you an overall

38:48 - 38:51

Samruddhi Mokal Outskill: perspective about monetizing Annet and workflows.

38:53 - 38:56

Samruddhi Mokal Outskill: There are 3 ways to do that. First is.

38:57 - 39:05

Samruddhi Mokal Outskill: You do it one-time builds, that is, someone tells you, I want this process automated, or I want this specific type of workflow. You create... create it.

39:05 - 39:09

Samruddhi Mokal Outskill: Give the JSONs to your clients, and you charge them just once.

39:09 - 39:11

Samruddhi Mokal Outskill: That is for... that is your build cost.

39:12 - 39:17

Samruddhi Mokal Outskill: Second is, Bear plus maintenance model. So what you do is you build a workflow for them.

39:18 - 39:27

Samruddhi Mokal Outskill: And you further maintain the workflow as well, because what is going to happen in 99% of the cases, your first time rate is going to be dependent on

39:28 - 39:35

Samruddhi Mokal Outskill: what the client has told you. But when they actually start using it, you will have to do a lot of customization, which is required.

39:36 - 39:49

Samruddhi Mokal Outskill: Because without that, it is not going to be useful for their team. It has the basic skeleton based on the normal wordings in the meetings or in the talkings that you might understand, but in practicality, that changes a lot when someone starts using it.

39:49 - 40:00

Samruddhi Mokal Outskill: So what you do is you have a build cost, and every month, you charge them that this is our maintenance cost, this is what is included in the maintenance cost. For example, you can have XYZ type of,

40:00 - 40:04

Samruddhi Mokal Outskill: Customizations required, or you can see that

40:04 - 40:18

Samruddhi Mokal Outskill: Since new models are coming every day in the picture, you can see that you're going to keep their workflow optimized with the new models. And also, as I mentioned, there are certain times where the models and it might not work, or your workflow might not work, due to some dependencies.

40:18 - 40:26

Samruddhi Mokal Outskill: So you have to make sure that... that is what you'll make sure, that their workflow is always up and running using this error handling, or using your

40:28 - 40:35

Samruddhi Mokal Outskill: Error handling workflows are switching to different models whenever required, depending on the type of error. So that is one thing, and the last one is...

40:36 - 40:38

Samruddhi Mokal Outskill: If you want a same workflow.

40:39 - 40:44

Samruddhi Mokal Outskill: to be used again and again. So what I mentioned right now was about custom building.

40:44 - 40:56

Samruddhi Mokal Outskill: So, coming to the monthly subscription, let's say you build one workflow, you build a front-end for it, and you just want people to use the same workflow again and again. In that case, you can stick to the subscription model.

40:59 - 41:10

Samruddhi Mokal Outskill: And coming to the next question, is NATN subscription under customer name, or... so it completely depends on the customer. Some of them want the NATN workflows to be on their server, so you have to...

41:10 - 41:14

Samruddhi Mokal Outskill: Create a server, entertain servers on their servers, and then build out the workflows.

41:15 - 41:24

Samruddhi Mokal Outskill: And some of them are okay with having it in your own accounts and running it for them. So Aniten has Anand's Enterprise version as well, so what happens is.

41:27 - 41:31

Samruddhi Mokal Outskill: Let's say, in this case, I have a personal space and I have my project space.

41:32 - 41:36

Samruddhi Mokal Outskill: So, similarly, when you have multiple clients, what you do is, you create separate projects here.

41:37 - 41:40

Samruddhi Mokal Outskill: And why separate projects are required is.

41:41 - 41:49

Samruddhi Mokal Outskill: If I'm storing the specific credentials in my projects, those credentials are not accessible to my personal workspace.

41:49 - 41:53

Samruddhi Mokal Outskill: So you create multiple projects so that each project remains only

41:54 - 41:58

Samruddhi Mokal Outskill: Dedicated to that specific client, so that you do not mix and match a lot of things.

41:58 - 42:10

Samruddhi Mokal Outskill: That is one thing to do. Another is create API keys separate for separate clients, and even if you're having separate workflows or separate departments where billing is separate for their departments.

42:10 - 42:27

Samruddhi Mokal Outskill: So, see what is the internal behavior of their teams, and create separate APIs, and at the end of the month, you can see this was the build of this API key, and you can take it from them, or if they're okay with giving their API keys, you can get their API keys. But the challenge that happens with getting their API keys is.

42:27 - 42:33

Samruddhi Mokal Outskill: If it is your API key, you have a track of what is happening in your system. If you get their API key.

42:34 - 42:38

Samruddhi Mokal Outskill: it is very tough to understand what is happening in the background of that API key. For example.

42:39 - 42:48

Samruddhi Mokal Outskill: I'm initially creating a workflow or testing out something, I'm using XYZ type of model. But I know that it can be done in a cheaper way if I use this model.

42:48 - 42:52

Samruddhi Mokal Outskill: But without testing, you might not know that, and without

42:52 - 43:01

Samruddhi Mokal Outskill: Getting the cost of what is happening, how many tokens are being sent, what is it charging for this specific type of action. That entire thing is going to be in their platform.

43:02 - 43:16

Samruddhi Mokal Outskill: So it is very tough to see what is happening, that's why it's better to have your own API case. Usually, APIs don't cost very high, unless and until you are creating videos for them, so if you're just using normal text models, LLM models, you can get your own API case, it will be very few

43:17 - 43:20

Samruddhi Mokal Outskill: Very minimal cost, and then you can give that cost later on to them.

43:23 - 43:25

Samruddhi Mokal Outskill: I want educational videos?

43:25 - 43:30

Samruddhi Mokal Outskill: For customers, okay, I think this was answered before, this is the same one.

43:32 - 43:35

Samruddhi Mokal Outskill: Is there a way to connect to Yahoo email?

43:35 - 43:45

Samruddhi Mokal Outskill: for doing activities similar to what we are doing with Gmail or Calendar? Yes, definitely. So you can connect any type of Gmail email that you want. You can just search for whatever nodes that you want.

43:45 - 44:00

Samruddhi Mokal Outskill: That is one. And second is, even if you have a specific dedicated email service that you have created, there is a separate email node itself. So you can get the server URLs, etc, and connect it to that email node, and it can still get the data from you.

44:02 - 44:08

Samruddhi Mokal Outskill: Which workflow to be used for Claude and cursor? Are you suggesting Anaton or any other?

44:09 - 44:22

Samruddhi Mokal Outskill: So this is a bit interchangeable, I did not get this question. So, which workflow to be used for Claude and cursor? So, Claude Cursor is completely different, and NATN is completely different. Cursor is completely for white coding.

44:22 - 44:25

Samruddhi Mokal Outskill: Claude is, as you guys know, it is,

44:25 - 44:34

Samruddhi Mokal Outskill: Anthropic tool where you can connect to different MCP servers, connectors, create your own AI agents, and NN is for workflow building or automations.

44:36 - 44:42

Samruddhi Mokal Outskill: So you'll have to give more context about this, guys, in the chat. This question is a bit unclear.

44:43 - 45:00

Samruddhi Mokal Outskill: Can you summarize MCP versus API key, differences or similarities, pros versus cons, when to use each? Okay. Also, I'll give you three concepts, because that is again going to come into the picture. That is, first is APIs, second is webhooks, and then third is MCPs.

45:01 - 45:07

Samruddhi Mokal Outskill: So let's keep MCPs aside for now. MCPs were recently launched, I think, 1 year or two years back.

45:07 - 45:17

Samruddhi Mokal Outskill: When AI Agents were introduced. So, MCP is the latest protocol that has been launched before MCP did not exist. Earlier, everything used to happen using API keys or webhooks.

45:17 - 45:20

Samruddhi Mokal Outskill: What API keys are? API keys

45:22 - 45:29

Samruddhi Mokal Outskill: So, let's stick to API. API key is your secret key or secret password that you get. So, sticking to API,

45:29 - 45:34

Samruddhi Mokal Outskill: API Endpoint lets you Talk to different softwares.

45:35 - 45:40

Samruddhi Mokal Outskill: So if you talk, right now, you do not have your connections over there, so...

45:40 - 45:44

Samruddhi Mokal Outskill: how to connect to different tools or softwares is using APIs.

45:44 - 45:49

Samruddhi Mokal Outskill: without APIs, you cannot talk to other softwares. So, API lets you

45:49 - 46:06

Samruddhi Mokal Outskill: talk to other softwares, and API endpoints are a specific action that you can take. For example, if I go to Jerry, or let's take Jarvis. So, each of these is a separate API endpoint. Check availability, get all events, delete calendar event, update an event.

46:06 - 46:12

Samruddhi Mokal Outskill: reschedule. So in the background, these are hitting separate API endpoints.

46:15 - 46:21

Samruddhi Mokal Outskill: So API is just a way to talk to a different software to take a specific action for you. But how API works is.

46:22 - 46:23

Samruddhi Mokal Outskill: For API,

46:23 - 46:29

Samruddhi Mokal Outskill: You have to trigger the workflow, or you have to hit that request to get back the answer.

46:31 - 46:40

Samruddhi Mokal Outskill: By default, it does not happen. So you have to configure it in a way that you call that other tool, it fetches what is happening in that, and then it gives back the answer. That is how API works.

46:41 - 46:47

Samruddhi Mokal Outskill: The books are... When a specific action takes place, it triggers by itself.

46:47 - 46:55

Samruddhi Mokal Outskill: For example, let's take, you guys saw what we did in the retail's voice agent. So, when the call was completed, the webhook was triggered.

46:56 - 47:01

Samruddhi Mokal Outskill: And it passed on the, call summary for you to keep it in your Google Sheets.

47:02 - 47:04

Samruddhi Mokal Outskill: So, APIs, you call the tool.

47:04 - 47:13

Samruddhi Mokal Outskill: It answers it back. Webhook is always live. When a specific action takes place, it hits the webhook and webhook gets triggered, coming to MCPs.

47:14 - 47:19

Samruddhi Mokal Outskill: MCPs are a layer between your AI Agents and your API keys.

47:19 - 47:27

Samruddhi Mokal Outskill: Without API keys, MCPs don't exist. Even if you create an MCP server, in the background, they are hitting different API keys only.

47:27 - 47:35

Samruddhi Mokal Outskill: So what MCP does is, First is reduces the hallucinations that AI agents used to have. Second is.

47:36 - 47:39

Samruddhi Mokal Outskill: It limits the context. So...

47:39 - 47:49

Samruddhi Mokal Outskill: In this case, there are these many MCP servers. Let's see if I did not have these MCP servers, I had connected all of these tools directly to Jarvis. It would have, let's say, 10...

47:50 - 47:55

Samruddhi Mokal Outskill: let's take roughly 20 tools attached to Jarvis, to this one agent only, if I had to create this workflow.

47:56 - 47:58

Samruddhi Mokal Outskill: So, how to reduce that is.

47:58 - 48:15

Samruddhi Mokal Outskill: MCP protocol was introduced so that AI agents reduce their context size, and second, reduce their hallucinations so that we get more efficient and to-the-point answers. So we just direct our Jarvis to this MCP, and this MCP further calls the required APIs based on what type of action you want to take.

48:19 - 48:20

Samruddhi Mokal Outskill: Alright.

48:22 - 48:30

Samruddhi Mokal Outskill: Can AI simplify or replace Parts of the meta copy, or offline conversion setup.

48:30 - 48:41

Samruddhi Mokal Outskill: Also, can AI automatically identify campaign problems and alert me before performance drops, drops significantly? So, Meta has lots of APIs. If you can connect your

48:42 - 48:53

Samruddhi Mokal Outskill: APIs to your workflows, or if you want to have a dashboard created, if you want to have an alert set up, you can definitely do that. And coming to the campaigns part, I have seen good amount of templates available on the campaigns as well.

48:54 - 48:55

Samruddhi Mokal Outskill: So, if...

48:55 - 49:06

Samruddhi Mokal Outskill: If you figure out the right ones, if you're using Google Ads, Meta Ads, whatever platform you're using, whenever you are running the campaigns, if it drops to a specific threshold, it will... there are... there is possibility that it will alert you.

49:06 - 49:09

Samruddhi Mokal Outskill: Based on what criteria you have set.

49:09 - 49:21

Samruddhi Mokal Outskill: So this is all depending on what criteria you have set, because you'll have to give it all of the numbers. If this type of KPI is about this, if it is below this, so you'll have to mention all the metrics, or all the,

49:21 - 49:24

Samruddhi Mokal Outskill: KPIs that you want, then it will work perfectly fine.

49:26 - 49:30

Samruddhi Mokal Outskill: So just check out Annet and templates, you'll be able to find the workflows for this.

49:32 - 49:34

Samruddhi Mokal Outskill: The jerry we learned

49:39 - 49:42

Samruddhi Mokal Outskill: About has a starting note as a trigger.

49:43 - 49:57

Samruddhi Mokal Outskill: But what if we want to create an animated character on my laptop that takes inputs and runs the workflow, like Web House E8? Was this EA built in lovable as separate software, or did you use Lizer AI to have a local agent?

50:02 - 50:22

Samruddhi Mokal Outskill: So this workflow is going to get run somewhere, right? It can be either Clawed, it can be on anti-gravity, it can be on cursor, so depending on... you can create animated characters wherever you want, you just have to white code it, telling that, I want an animated character showing on my laptop or system, and it will do that job for you. So it is not a very complex thing to do, you just have to prompt it that way.

50:24 - 50:32

Samruddhi Mokal Outskill: For my e-commerce business, should I use a RAC system for CRM, customer feedback, sales, chat and voice, or other modules?

50:34 - 50:38

Samruddhi Mokal Outskill: So, RAG is only required if you want to extract out that information.

50:39 - 50:43

Samruddhi Mokal Outskill: So if you want to have an e-commerce business, and if you want to create a...

50:43 - 51:03

Samruddhi Mokal Outskill: customer support chatbot, then RAG is required, because it is going to fetch your CRM, see what is happening for each of the orders, and then reply based on that. So this RAG is going to be a combination of... this is called as hybrid RAG. Hybrid RAG does two things. First is keyword search, and second is vector search.

51:03 - 51:11

Samruddhi Mokal Outskill: Why keyword searches required is... For e-commerce business, let's say you have a specific, billing number.

51:11 - 51:19

Samruddhi Mokal Outskill: or if you have a customer saved, you have to search for that customer, let's say, based on their phone number or email ID, whatever your unique identifier is.

51:19 - 51:38

Samruddhi Mokal Outskill: So that is what keyword search does. It matches the exact word-to-word, and then further it passes on to your vector system. Because, let's say someone has asked about your refund policy. So you also need to know the customer name, which is done by the first one, and the second one is going to go to your, let's say, company policies and retrieve the required answer and answer it back.

51:39 - 51:41

Samruddhi Mokal Outskill: So that is called as hybrid drag.

51:47 - 51:54

Samruddhi Mokal Outskill: How can you create the colored blocks in Annet to identify groups of activities in the flow? I see your flows... so that is called as sticky notes.

51:55 - 51:56

Samruddhi Mokal Outskill: So if you go to this...

51:57 - 52:12

Samruddhi Mokal Outskill: symbol over here, that is Add Sticky Notes. You can add as many notes as you want, you can change the... it got added at a random place, but yeah. So you can change the color of this note, you can add whatever text you want, you can change the sizes of this. So that is the sticky note that I have added.

52:16 - 52:32

Samruddhi Mokal Outskill: tried using HeyGen for creating an avatar for Videogen. While it's got a uniqueness to it, it is not production ready. Any other tools to do editing and polishing, these videos are avatars to postable content. Any other better alternatives to HeyGen?

52:32 - 52:37

Samruddhi Mokal Outskill: Also, Hajin, what happens is, if you're creating an avatar.

52:37 - 52:42

Samruddhi Mokal Outskill: What matters most is, first, your expressions, second.

52:42 - 53:03

Samruddhi Mokal Outskill: your lighting, because lighting also affects a lot. And if you want a voice cloning, as that they... the mentor mentioned, that your voice has to be... do not read something... something like a book or something. Talk to it naturally. And it also captures your

body language. If you see, for example, right now, I'm doing a lot of hand gestures. So if you do that, it captures that exactly as it is.

53:03 - 53:10

Samruddhi Mokal Outskill: So you can have multiple poses. If you can sit and do the session, you can, let's say, you're standing and doing, you're walking and doing.

53:10 - 53:24

Samruddhi Mokal Outskill: So whenever you go to already existing avatars of Hygen, look at what they have done. That will give you an understanding about it. So if I just go to one avatar, right now I do not have my Hyeen logged in, but if you go to one avatar, there are going to be multiple

53:25 - 53:27

Samruddhi Mokal Outskill: Videos that they have posted.

53:27 - 53:44

Samruddhi Mokal Outskill: So you can see different styles, different type of toning, different type of body language, different type of gestures. So just one avatar is not going to create the required video for you. You need to have different expressions, multiple avatars created, which are going to be used for multiple types of,

53:44 - 53:58

Samruddhi Mokal Outskill: workflows or multiple types of situations that are going to be done. And also, another is, you guys use Google Flow, right? So Google Flow also has launched their own avatar creation, so check out Google Flows, you'll be able to create an avatar there as well.

54:01 - 54:09

Samruddhi Mokal Outskill: What is your advice on newbies who lack the process mapping in developing products using Grogbot or NN?

54:10 - 54:17

Samruddhi Mokal Outskill: So, going to Grogbot, Grogbot is very simple. As you saw, Grogbot is about prompting and giving it the right connectors.

54:17 - 54:25

Samruddhi Mokal Outskill: So you do not have to think about creating workflows or doing much of the process mapping in Grogbot, because Grogbot is a completely finished tool.

54:26 - 54:33

Samruddhi Mokal Outskill: So you just have to give it a prompt, it will, by default, ask you questions if it is confused about something, and you can... with the prompt itself, you can do that.

54:33 - 54:36

Samruddhi Mokal Outskill: to the NHN for process mapping.

54:37 - 54:39

Samruddhi Mokal Outskill: Map the process in simple terms.

54:40 - 54:44

Samruddhi Mokal Outskill: So let's say if you're doing... If you're doing your marketing.

54:45 - 54:50

Samruddhi Mokal Outskill: So, marketing usually has 3 basic processes. First is content research.

54:51 - 54:59

Samruddhi Mokal Outskill: Second is, Content generation based on your research. And third is the dashboard or the analytics part of it.

54:59 - 55:03

Samruddhi Mokal Outskill: So, these are main processes. Now, each of this is going to have subprocess.

55:03 - 55:14

Samruddhi Mokal Outskill: So, for... let's say for content generation, you're going to have some X type of resources, or you want to research your competitors. So, for the main processes, define the sub-process.

55:14 - 55:22

Samruddhi Mokal Outskill: Do the similar for the rest of the two, and then once you define the sub-process, in that box, try to attach an n10 node, or try to attach a tool.

55:23 - 55:35

Samruddhi Mokal Outskill: So just create the process normally, how you create your normal... in normal flowchart or normal English, and then in each of the blocks, assign it a tool or assign it an niten node. That will give you a way better understanding about the architecture.

55:39 - 55:53

Samruddhi Mokal Outskill: If after a month, we create a multi-agent system for a use case, can we still publish on LMS and ask for feedback and optimization? If yes, what channel would that be? So this is for Sumedha to take up. I'll let Sumedha take it up.

55:55 - 56:03

Samruddhi Mokal Outskill: Only if you're comfortable can we get the JSON for video automation which you made? If not, I totally understand. In that case,

56:03 - 56:06

Samruddhi Mokal Outskill: Will you be able to provide any workflow guidance in form of document?

56:07 - 56:15

Samruddhi Mokal Outskill: which we can refer, kindly suggest. Also, I'll share... I won't be able to share the entire marketing workflow, it has a lot of things, but I'll share specifically the video generation template that will help you.

56:20 - 56:25

Samruddhi Mokal Outskill: Is there any digital approach for getting clients to set automation for them?

56:25 - 56:28

Samruddhi Mokal Outskill: How did you start? Please throw light on your journey.

56:29 - 56:37

Samruddhi Mokal Outskill: There are digital approaches that you can do, but what I'll suggest is, if you guys are experienced, this is what has been my experience as well.

56:37 - 56:56

Samruddhi Mokal Outskill: Cold outreach is something that you can do, but initially, to get started, start with the people you already know. So you are going to have some type of network, right? I started with my network. Initially, I just started posting on my socials, I waited for me to get clients, and then it did not work out. So what I did was I started reaching out to my network. I'm doing something like this, and this...

56:56 - 57:07

Samruddhi Mokal Outskill: What happens is your network already trusts you for a specific type of thing. Even if they do not trust you for AI, they know that you will get the job done in this specific type of field, because you are an expert in that field.

57:07 - 57:09

Samruddhi Mokal Outskill: You're just adding AI layer on top of it.

57:09 - 57:16

Samruddhi Mokal Outskill: If you're experienced. If you're not experienced, then the approach is, like, Try creating different projects.

57:16 - 57:19

Samruddhi Mokal Outskill: Try posting them on your social medias.

57:19 - 57:30

Samruddhi Mokal Outskill: try creating a portfolio, and then start showing that portfolio. One way is you can just go to freelancing websites, etc. You can post your portfolio, you can reach out to the clients, you can bid on the

57:30 - 57:38

Samruddhi Mokal Outskill: projects that they're launching. That is one. Second is, as I mentioned, social media, and third is doing the digital outreach, that is...

57:39 - 57:42

Samruddhi Mokal Outskill: Completely cold outreach to the client, defining what type of

57:43 - 57:50

Samruddhi Mokal Outskill: product that you want to build, what type of automation you want to build, and then figuring out the right ICP for you. Do not just

57:51 - 58:07

Samruddhi Mokal Outskill: start cold reaching out to everyone that is there in your network. Define the type of workflow, define the right ICP. ICP is ideal client profile. Who is going to be the right person to buy this workflow? Do that, and you will get replies. It is going to take a good amount of effort for automation.

58:08 - 58:19

Samruddhi Mokal Outskill: For... especially for cold outreach, but you will get replies from there. Another is, if you're creating some products, launch it on Product Hunt. If you're part of certain communities, just tell that you're doing this.

58:19 - 58:21

Samruddhi Mokal Outskill: And you can get clients from there as well.

58:24 - 58:37

Samruddhi Mokal Outskill: The complex Annet workflow for education videos, which is shown few moments back, can it be done through VIP coding and voice prompts? Yes, it can be done completely through VIP coding and voice prompts as well, just the tool is going to be different. For example.

58:37 - 58:48

Samruddhi Mokal Outskill: I showed the workflows in N10, but if you're going with pipe coding, it is going to be, let's say, your Cloud code or anti-gravity, so the tool is going to be different, but the process remains the same.

58:52 - 58:55

Samruddhi Mokal Outskill: If we make our own software.

58:55 - 59:02

Samruddhi Mokal Outskill: What license should we use? If you're making software for a customer, should we configure the license, or does it not matter?

59:02 - 59:20

Samruddhi Mokal Outskill: So if you're creating your workflow, the best is to stick to MIT license, and for client, usually they do not ask for these licensing and all, because you are integrating on their own systems, they have their own licenses for their products. So, unless and until it is required, do not create a license.

59:20 - 59:22

Samruddhi Mokal Outskill: For the clients.

59:24 - 59:31

Samruddhi Mokal Outskill: Can you please share your LinkedIn? Yeah, sure, I'll share my LinkedIn. Yes, I have it open here, I'll just share the link in the chats.

59:42 - 59:51

Samruddhi Mokal Outskill: So, best models for video generation and for image generation, including paid, Higgsville for image, any others, any others outside Hygian.

59:51 - 59:59

Samruddhi Mokal Outskill: Also, Higgsville for image and video generation, Hazen for avatar generation, another is FAL AI. So, File.ai also has all of these models.

[01:00:08] - [01:00:11]

Samruddhi Mokal Outskill: So you can explore Falley as a dashboard as well.

[01:00:15] - [01:00:19]

Samruddhi Mokal Outskill: If I want to make animated videos with short stories.

[01:00:19] - [01:00:39]

Samruddhi Mokal Outskill: which has many characters with proper background, etc, please suggest tool which will be apt and cost-effective. So whenever you are generating stories, always remember to create a storyboard, and give that storyboard to your image-to-video generation model. So create a storyboard, give it to your image-to-video generation model, and make sure for each of the

[01:00:40] - [01:00:56]

Samruddhi Mokal Outskill: pics that you have created in the storyboard, you attach the, let's say, image number. So this is first, this is second, this is third, so it creates an entire series, and it stitches those images into a video. I think I have created something similar on my flow. Let me try logging into my flow.

[01:01:01] - [01:01:03]

Samruddhi Mokal Outskill: So, yeah, so this is,

[01:01:04] - [01:01:11]

Samruddhi Mokal Outskill: one chocolate advertisement. So this is a storyboard that I've created. So it starts with this, it goes this, this, this, and then it ends with this.

[01:01:12] - [01:01:17]

Samruddhi Mokal Outskill: So similarly, create multiple storyboards if the story is very long, and then give those storyboards to your

[01:01:18] - [01:01:22]

Samruddhi Mokal Outskill: Image-to-video generation models, and it will develop the story on top of it.

[01:01:27] - [01:01:31]

Samruddhi Mokal Outskill: Can you advise on resource library or platforms or tools useful for automations?

[01:01:32] - [01:01:33]

Samruddhi Mokal Outskill: useful for...

[01:01:34] - [01:01:44]

Samruddhi Mokal Outskill: professional accountants and financial controllers. Also, it depends on how you use these tools. So, if you go with Claude's or ChatGPT's Enterprise versions.

[01:01:44] - [01:01:48]

Samruddhi Mokal Outskill: Whatever privacy concerns that you have, that will go away.

[01:01:48] - [01:02:05]

Samruddhi Mokal Outskill: Because all of these are... if you go with the enterprise versions, they're going to give you all of this privacy and whatever concerns that you have, that is going to get resolved. Second is, if you want to stick to local models, you guys saw how OLAMA works yesterday. So you can switch to OLAMA models, download the models locally, nothing goes out of the

[01:02:05] - [01:02:15]

Samruddhi Mokal Outskill: out of your systems, that is another way. And, especially when you're working with finance, what I try to do is, I always keep a log of

[01:02:15] - [01:02:24]

Samruddhi Mokal Outskill: what the AI has changed. So, create a separate sheet whenever you're prompting your AI agent to do some changes on your accounting or on your finances.

[01:02:24] - [01:02:36]

Samruddhi Mokal Outskill: It keeps a log of, okay, in this Excel sheet row, it has done this type of change. So even if you want to go back and understand what happened in your entire system, you will understand what changes, what exactly, where it has done.

[01:02:36] - [01:02:39]

Samruddhi Mokal Outskill: And what formula it has used, because

[01:02:39] - [01:02:46]

Samruddhi Mokal Outskill: If it messes even one thing in your finances, it is very tough to identify what exactly it did. So always create

[01:02:46] - [01:02:48]

Samruddhi Mokal Outskill: the change... Changes Made sheet.

[01:02:49] - [01:02:51]

Samruddhi Mokal Outskill: So that it keeps log of every step it is taking.

[01:02:53] - [01:02:56]

Samruddhi Mokal Outskill: That will save you hours if the... if it messes up at a certain point.

[01:02:57] - [01:03:06]

Samruddhi Mokal Outskill: Can you please share your workstation setup listing the AI platforms that you use the most, and the AI platform that you have a subscription, and which fee

[01:03:06] - [01:03:21]

Samruddhi Mokal Outskill: which free ones you use the most, that will be very helpful. So definitely, yes, I'll share that. So whenever I'm creating my combined toolkit list, I'll add what I use, or I'll add them as favorites. From there, you can get an understanding about what I use as well.

[01:03:23] - [01:03:29]

Samruddhi Mokal Outskill: I cannot see ChatGPT on Olama app options. I tried closing and reopening it a few times.

[01:03:29] - [01:03:33]

Samruddhi Mokal Outskill: Also, there might be a chance that if you have not,

[01:03:33] - [01:03:41]

Samruddhi Mokal Outskill: downloaded ChatGPT locally, it might not be able to capture that in the background, so just check if you're installing ChatGPT's desktop version or not.

[01:03:42] - [01:03:57]

Samruddhi Mokal Outskill: If we take NHN cloud version, can we shift to local version? Yes, definitely, you can. So if you go to your NHN's workflows, if you go to Admin Panel, you will have an option that if you want to export all of your workflows or not. So you can export all of your workflows, put it in your local version, and all of the workflows will be...

[01:03:58] - [01:03:59]

Samruddhi Mokal Outskill: Remaining as it is.

[01:04:05] - [01:04:11]

Samruddhi Mokal Outskill: If someone does jailbreak or prompt injection, and AI Agents have update or send permission in

[01:04:12] - [01:04:19]

Samruddhi Mokal Outskill: any Gmail or calendar, how Guardrail is done. So, first is, this has its own

[01:04:19] - [01:04:27]

Samruddhi Mokal Outskill: guardrail nodes. So search for guardrail nodes. Each of the guardrail that you want to add, you can configure the node accordingly. Second way is...

[01:04:28] - [01:04:34]

Samruddhi Mokal Outskill: you have to see where the source is coming from. So, for example, it depends on the workflow here.

[01:04:34] - [01:04:37]

Samruddhi Mokal Outskill: In the Telegram one, I have added a filter node.

[01:04:37] - [01:04:51]

Samruddhi Mokal Outskill: If the message is coming from this username, only then it gets passed on to the further workflow. So whenever you're making the workflows, try to add layers where these steps are already added or pre-built inside your workflows.

[01:04:56] - [01:04:57]

Samruddhi Mokal Outskill: I'm still confused.

[01:04:57] - [01:05:07]

Samruddhi Mokal Outskill: when should we use NHN, and when do we do direct coding in codecs or Claude? Also, about differentiation between NATN and Claude or codecs is...

[01:05:10] - [01:05:27]

Samruddhi Mokal Outskill: Let's begin with the bigger picture. Can you do what you did in Codex or Claude? Yes. But is the interface going to look similar? No. Are you going to understand everything that is happening in Codex or Claude? No. Reason being, it is completely white-coded. So you'll learn what is anti-gravity today. So, similarly.

[01:05:28] - [01:05:40]

Samruddhi Mokal Outskill: If you're using Codex or Claude, you do not have a very nice-to-go interface that you have in NN. And in NN, you see what nodes are being used, what is the configuration of each node, so it is more like a...

[01:05:40] - [01:05:42]

Samruddhi Mokal Outskill: Very user-friendly tool.

[01:05:42] - [01:05:55]

Samruddhi Mokal Outskill: From where you can select the options and drop-down itself. But if you're using codecs or Claude, it is going to be completely coded in whatever language it has coded. At some points, you won't even understand what language it has coded if you are not from the coding background.

[01:05:55] - [01:06:03]

Samruddhi Mokal Outskill: So if it messes at a certain point, it gets very tough to identify, if you are a non-coder, what went wrong in codecs or cloud code.

[01:06:04] - [01:06:08]

Samruddhi Mokal Outskill: Can you do what you do in N10 codecs or cloud code? Yes, it is just tough to...

[01:06:09] - [01:06:18]

Samruddhi Mokal Outskill: identify when it's in complete code. So that's the only reason that you stick to NHN. If you know how to do Wipe Coding, you can stick to codecs or Claude.

[01:06:20] - [01:06:26]

Samruddhi Mokal Outskill: Alright, we are also up with our time, so I'll hand it over to Sumedha from here.

[01:06:27] - [01:06:44]

Sumedha: Perfect. Thank you so much, Samrati, once again, for taking this up. I hope everybody found this very insightful with all the insights that was packed, and we will, let you go for now, and we will see you again tomorrow for the session. Thank you so much.

[01:06:46] - [01:07:11]

Sumedha: Alright, so I hope everybody found this session insightful, and you still have your energies up, because up next, we have a very interesting session planned for you, which is

Coding Agents for non-coders, okay? Right, you do get your session recording and transcript, just go to the particular day. So, let's say, for

[01:07:11] - [01:07:14]

Sumedha: For example, yesterday was Day 9, right?

[01:07:14] - [01:07:28]

Sumedha: So, day 9, under that, you will be finding officers, resources, and Recording section. So, just click on that, and you will be able to find your resources, as well as the recordings, with transcript, okay?

[01:07:29] - [01:07:38]

Sumedha: To join your WhatsApp group, you will just have to go to Welcome and Next Steps, and you will be able to join the official WhatsApp groups.

[01:07:38] - [01:07:51]

Sumedha: Beside that, if you're talking about the hackathon groups, we will talk about it more into this session. So once our main session is done, before we break for our breakout rooms, we will be discussing about your hackathon groups.

[01:07:52] - [01:08:01]

Sumedha: All right, with that, we have a very interesting sessions planned where you will be diving into anti-gravity, so I hope you are excited.

[01:08:01] - [01:08:14]

Sumedha: And, yeah, that is all. Go ahead, take your break, take your quick 30 minutes break, and come back for the main session at 7.30pm IST. I'll see you soon.
