

AIAP C13 Day 3	
Question	Answer
Do I need to login N8N with our personal email id and can work with free account?	you can use a personal email with n8n cloud
I did not get chance to work on Day 2	
No	
yes, I have already started a youtube channel and will be posting my first AI generated video soon and will share with everyone.	That's great! You'll enjoy this session.
Sorry for this.. Try Carnatic Classical Instrumental for people who love this music.	
Hello - could you make this google sheetz downloadable - its from Day 2 (video prompt sheet) - https://docs.google.com/spreadsheets/u/2/d/e/2PACX-1vQL21aiSbp4ZAqiv5OKWXLEeOaARZ0Z-pMh1BvbmLbVdAtUrAfCKDQpeBFyogayFLBJvN78312Jkp-f/pubhtml	Please raise a support on LMS
do we need have n8n login before this session..do we have breakout today	there will be breakout rooms and we will login together but yes having it already is better
Asked help for assistance with some of the coupon downloads. Did not hear back	Hey Roger, please reach out to support@outskill.com. Our Team will surely assist you.
Beyond the joy of earning a badge/posting on LinkedIn, is there any relation between earning badges and a final certificate for the course?	
Hi, can the recordings be downloaded ?	you can view it on LMS
checking project status reports daily	
reports	
N8N will be free only for 14 days, after that how we will work?	n8n has a 14 day trial. You can either upgrade to the paid version, or self host it for free after that.
Investment workflow	
Summarize my newsletter subscriptions and turn them into a specified format for a particular audience	That's a very interesting use case, and a lot of workflows are oriented toward summarizing.
can u post the link for n8n	https://n8n.io/
Hi, need slow and detailed step by step guidance to sign up for n8n as it is asking about company email or self hosting. Which one is the free version? The pre-recorded video has no audio when the API and n8n setup was shown so it is not clear.	For now we are using the cloud version which has a 14 days free trial and the work email field can be filled with your personal one it is totally fine and don't choose self-hosted for now because we will not use it in the breakout rooms so you can discover it later
London	
USA	
Brighton, England	
M 365 Copilot can do all the things that we are learning here. Why not use one platform instead of multiple	Hey Diwakar, n8n offers the largest selection of connectors to integrate with nearly any application. If your data is mostly in the Microsoft ecosystem, Power Automate is another good option, though it's specific to the Microsoft Suite.
I used n8n before so can I delete and recreate the account as I don't have any other email ?	you would need to create a new email address and sign up with that email. n8n only has a 14 day trial.
never	
never	
never	
never	
never	
star	
star	
better	
i missed the first 15 mins how can I summarize with AI notes	the session just got started, don't worry
advance	
Repetition	
I resent an email, repeating what I sent 3 days ago.	
What difference between LLM and SLM	A Large Language Model (LLM) is trained on massive amounts of data to handle complex, wide-ranging tasks but requires significant computing power. A Small Language Model (SLM) is trained on less data, making it faster, lighter, and able to run directly on smaller devices like phones.
Sachin Tendulkar	
24 minutes past the hour here, and no new interesting new piece of knowledge...	
my house	
HAMBURGUER	
Fruits	
Does LLM have all answers in its memory or does it look up something or somewhere?	LLM or Foundational LLMs respond based on the training data. But if you're using a tool like ChatGPT / Claude, they have a feature called Web Search, which LLM can use to fetch real-time information

customization based on needs	
Support said I need to book a 1 on 1 support...how do I do that?	Hey Rick, please choose one slot from the given options in order to connect with our team.
Thanks Prakarsh, I get the part around training, but then is the answer/response derived from the LLM's running memory based on training or does it function differently?	It's collective from LLM training data. and web search derived info collective.
Just looking to understand the mechanics here	
can you clarify the context as a word predictor in a LLMs answer, reading the question etc.	LLMs read your question and predict the most likely next word, one word at a time, based on patterns they learned from training data. They do not think or read like humans, but instead continuously calculate which word should come next to complete the answer naturally.
i dont have a company email only a gmail email. Am I still able to make an account?	you can use a personal email
The color codes are basically the split of the qurstion asked...correct	
But there are finite words - so words can be converted into clear tokens. How are images converted into tokens?	Images are split into tiny square grids called patches, similar to puzzle pieces. The model turns each patch into a unique numerical representation that acts just like a word token. This allows the AI to process visual patterns in the exact same way it processes written text.
does it predict the next token number or next word?	it predicst next token, often times token is almost equal toword
beautifully answered	
please explain images more ?	
no	
no	
no	
it is clear and visible	
So, in thiscase training data is just working as a database for LLM. Is it?	Yes in a way but it is called Data set and it is fed to the AI model to train it on stuff like image generation or a new language
considers the previous topic	
but coding solutions require "clear, repeatable logic" construction regardless of language, right?	Yes sure It is an effective way to save you time when debugging and building a large codebase
andy burnham	
Got it, Thanks	
how do you clean the data for of the memory to give correct context? because it will still pick up alot of noise.	We will be able to give our agents memory in n8n. We get to choose the context window.
I have 180 days in my free trial, not 14...	Thats interesting. n8n is normally 14 days
Imagine you have given the memory of a Jira User to replicate, repetitive task, wont there continue to be hallucinations?	We can reduce hallucinations by giving our agents good system prompts, this is completely separate from memory. Memory is remembering the last thing you said to it.
it can	
Would it know what "email" means, at this point at all?	Yes, LLMs know what emails are, they just dont have access to our email.
yes	
For tools/connectors for food delivery, is it necessary for that company to have a proper API or connector? or is it okay if I just log into the website on chrome for it to do it?	it can be done both ways, straight api generally costs less tokens and has more predicatable results but browser automation can be used as a fallback
what is difference between mcp and connector	Mcp is the same as connector Connector is the user friendly one of it
Can you please give us access to this excalidraw for future review?	Everything will be on the LMS :)
If we have API then why MCP? Whats the edge to MCP?	MCP is used to reuse multiple API's. They are helpful for keeping things organized.
Any application can be called a tool?	an application that let's LLM doRead or Write
zoom call dropping again and again	
whats the difference between MCP and connector	They are basically the same thing, just different names
So MCPs are used to connect LLM to external integrations, right ?	correct yes
Tools can be optional - right?	Yes
With Gen AI, why have we started rebranding APIs as MCPs? Is there any specific difference between the 2?	APIs act as general connectors between any two applications. MCP is a standard built specifically to connect LLMs like Claude directly to external tools.
What's the difference between automation workflow and AI Agent or both are same?	They are mostly the same. An AI Agent can be used in an automation workflow
How do you get cloud version. Do not see this option	of n8n? the online version is the cloud version you just need to make a normal online n8n account and you're good to go
Robert can you explain me bit more what is meant by reuse multiple APIs in Context of API vs MCP. Maybe a simple mock example. So I can understand better how it helps usage in more organized access?	MCP's are a grouping of API's used together. Think of it as a folder that you put tasks/api's in. You can use goggle api to search email. when you want to do it again, you need to build that api again. an MCP is built once and reused in multipel apps
Will AI agents always has Tools connected to it..	Yes and without tools it will be just a normal ai chatbot
100	
10	

If i clone the code and establish in local so i can use for free.. am i correct	yes, you can use it for free, heres a link on how to self host. It takes around 5 minutes. https://docs.n8n.io/deploy/host-n8n				
n8n so if we can download it and use it on our computer... then we dont actually have to pay to use it?	yes				
what's the significance of being open source?	the significance n8n is being open source as a team of developers developed connector so now its one of the largest platform with any connector you can explore.				
if its code is open source, can i copy the code and use it without paying??	yes. you can use it completely free				
if its code is open source, can i copy the code and use it without paying??	The only cost to you is the machine you run it on. If you use it on your laptop, its free. If you buy a server, that will cost money.				
so if its hosted locally how its updated	you would need to update it whenever there is an update.				
And we have access to all the connectors/plugins if self-hosted?	yes. you have access to everything				
does n8n runs locally on it's own server or needs a server to run on?	yes, it needs a server to run on. It can run your your local pc if you want.				
could you load on local NAS drive ?	yes				
How do I know when they have update?	They actually push notification in app for updates.				
what computer specs do i need to host it locally?	https://docs.n8n.io/deploy/host-n8n/deploy-as-an-oem-integration/prerequisites				
what should be the VPS server configuration? also is n8n based on what coding language? can it be hosted on shared linux hosting server	heres some info on deploying. https://docs.n8n.io/deploy/host-n8n/deploy-as-an-oem-integration/prerequisites				
Will you cover how to self host n8n?	Here's a link. It takes around 5 minutes. For today's session, use the cloud trial. https://docs.n8n.io/deploy/host-n8n				
If you start on the n8n cloud plan, can you move the work to VPS easily?	Kind of. You would need to download all workflows from cloud, then import them all in individually into your self hosted version.				
does it mean that the data are just public for me or my client if i set up an Agent by self hosting 8n8? because one of the most questions are , where are my data or are they easy to hack or just private , etc. ?	if you use n8n cloud, it is stored on n8n's machines. If you self host, it is stored on your machine. n8n cloud is secure, and if you self host, you are in charge of security.				
Are there any business trade shows happening here in Abercrombie?					
can u show how to self host on local computer	heres a link on how to self host. https://docs.n8n.io/deploy/host-n8n				
once we download source for local hosting , can we get product upgrade of n8n?	yes, you'll have to re download it				
how big is the memory required to host n8n in local computer?	i think 4GB of Ram is suffice for most automation, but may require more for more complex workflows				
Does n8n come with an AI assistant if you self-host it on your server?	It does not.				
how to host in local machine can you share some documentation / video if you have	heres how to host it. https://docs.n8n.io/deploy/host-n8n				
Could I not use a ChatGPT project to save memory and have that environment manage the automations and integrations? platform.open.ai based?	you can, but that is very limited. n8n is a much better and more reliable solution to build automations				
Not Related to whats being taught, but during Mastermind I heard we have a technical version of the Accelerator. How can we get that? As I want to learn things more technically as well along with what is being taught in the curriculum.	Hey Tritam, you can get in touch with support@outskill.com. They'll surely help you and assist you in deciding your next steps.				
so the automation we build on n8n will be out of use on free trial once it is past 14 days duration? can we move our automation to github?					
how do we do it can you please explain so in future when i wanted to use the model i can use it from the github or i can download and use it in the paid version cos i dont have the tech expertise to implement option 2, or 3 to have virtual server or local server implementation on my pc.	i'd recommend downloading the workflows before the 14 day trial ends. You can then import it into a self hosted or cloud version later.				
ok - wondering why not more reliable	because ChatGPT is indeterministic workflows n8n is more deterministic workflows				
best session till now	Glad you liked it				
how can we connect tools which are not on n8n??					
How often do we have to download it from github to own local server/machine	If you want to connect it with claude just give the github url to Claude and it will download it				
You're doing fab					
my question is regarding last session about creating AI videos. could you tell how to build a YouTube video upto 5 or 8 min. it would be greatly helpful.	there are many different ways, the simplest is to combine multiple clips generated by higgsfield and using claude to create the higgsfield prompts - it may require some manual editing and touch-ups				
Why is Oracle not mentioned as VPS?	It can be used but it is not cheap hostinger is better				
re there some documents that help to setup n8n on local PC	Here's how to self host. It takes around 5 minutes. Use cloud for todays session. https://docs.n8n.io/deploy/host-n8n				
When we get a resource, post this class, where it shows us how to self-host N8N, like in a PDF version or something like that	Here's how to self host. https://docs.n8n.io/deploy/host-n8n				
Can we get a cheat sheet to host n8n on a private server?	For that, please raise a request on LMS				
Can we get a cheat sheet to host n8n on a private server?	https://docs.n8n.io/deploy/host-n8n				
do you have a workbook on how to setup the VPS for n8n	not in this session, please raise a request for the same in LMS				
Can we get a resource, post this class, where it shows us how to self-host N8N, like in a PDF version or something like that ?	For that, please raise a request on LMS				
How. to host n8n on vps and use	Go to hostinger and you can find it there ready to install				

Is there any automation tool less expensive than n8n	there are, but it'll be cheaper to self host your n8n server and use it
What software is he using?	n8n
i have my hosting account where my website is hosted i can host N8N also over there	yes
no where he is drawing it says excaldraw whiteboard	its excalidraw
Form submitted	
submit	
if my understanding correct that workflow is combination of different agent and each agent is assign a task	thats right. automation will use steps of getting data, using ai, and doign tasks.
Spam	
Vaibhav is doing a session tomorrow on GPT Astra 6 - can we get that recording here	can you email this concern to support@outskill.com
As the time is clashing with our session tomorrow	
But how does LLM classify spam and genuine inquiries? Isn't using keywords and context too?	Depends on your prompt you give it
Any advice on continuing to stay on Whatsapp for internal communications - we are a small very low tech team looking to improve our digital skills. Love the ease of use for video. I feel like I need to make a decision to leave the app or not - was reading yesterday that it's complicated with integrations. A priority automation for me would be to move video and images to a shared image bank.	you can use whatsapp within n8n for automations. You should be able to set up what you described.
But who looks at spam	
what if the validation step fails?	The workflow will immediately halt and throw an error unless you have configured the node to Continue On Fail or set up an Error Trigger workflow to handle it.
its from last session, i want to create a youtube video which will go upto 5 or 10 min like vaibhav use to do. how to create that can we have insight on this as well?	Please raise this on LMS as this is not related to current session
I had done a similar exercise using Rapid miner earlier (couple of years ago)..So is that tool obsolete?	So N8N has a massive range of connector won;t say its obsolete depends on your use case and requirements But I will say give a shot to n8n it builds on you overtime the series of automations you can build here
Once the workflow is created, how and where de we use it? I mean how do we share the workflow with others?	it depends on the workflow eg if the workflow starts with a form trigger you can share the URL of the form - but if you want to share the actual workflow - you can download the workflow file in the top right
can we have n8n workflow on mobile	sure on the new iphone duo ofcourse
can we have n8n workflow on mobile	Yes, you can access and manage already n8n workflows on mobile devices using your phone's web browser, but it would be difficult to create the workflow since the screen would be small and to customize the nodes would be difficult.
Why will he use chatgpt? Why not simple open ai llm models?	we will be using openai llm models in n8n
on gmail triggers, how do we ensure that the automation doesn't click on an attachment which contains some form of virus?	Depends on your Context or the System Prompt you will enter which will ensure that it validates all the links and dosen;t end up clicking on the once which can lead security concerns.
Can i connect to sharepoint instead of google sheet or gmail?	yes sure
What is the difference between using ChatGPT and n(n for my automations?	we will be building a workflow in n8n that will be using chatgpt as the brain
does n8n whatsapp integration can be done with personal whatsapp accounts?	I believe it is only whatsapp business
Please don't skip explaining the webhook call!	A webhook is a digital notification that automatically sends real-time data from one app to another the moment an event happens.
In today's world with AI Automation, Is MLOps still valid?	Yes, MLOps is still critical, but it has expanded into LLMOps to manage prompt engineering
what is the difference between manual trigger and submit form trigger	A manual trigger requires you to physically click a button inside n8n to start the workflow yourself. A submit form trigger starts the workflow automatically whenever a user fills out and sends an online form.
Do we have workflow automation using copilot at some point in these 14 days?	no
we only get to use MS Copilot at work	explore power automate it works great with Microsoft Suite.
Say if I want to create an automation to check when a particular product in a specific size comes back in stock on amazon.com, can i not do it on claude itself? or do i need to create n8n workflow for such tasks as well? and why?	the is proably possible on claude cowork. Which costs tokens. If you build it on n8n, it can do the work on the back end and might be cheaper.
how can we use whisper function on various apps	just install wisper flow it works with everything where you can type
In reality the form would be on the agency website and not on n8n. In that case we would either use a webhook / http PUT or POST call, right?	you can either embed the n8n form in the website or use a webhook with a post. There is a node for it.
Rather than adding each feild.. can we create a google sheet and update it.	No
Any reason why we are using forms within n8n? Is this required for automation or is that just for simplicity? Typically, in real life, it will be a webform or google form or MSFT forms.	This is for simplicity. You can use any type of form or a webhook calling a custom form on any website.
Why does the attribute names require question mark? Is this compulsory?	No. just a convention
follow up question: n8n automation does not cost tokens the way claude costs?	Its a bit different. in n8n, each license level comes with a certain amount of runs per month. starting at around 2k. On self hosted it is unlimited for free.
Is power automate also covered in these 14 days?	

If my form exists on an external website, say my store website, how do we initiate a workflow from our website into n8n?	you just use the n8n form trigger which has already a link and just put this link behind a button in your website				
how to put validations on the form fields. like charaestric length, non usage of special characters	you can use if nodes on that.				
are the Q & A listed in the resources for others who might have had the same type Questions?	Hey Gilbert, The Q&A are not listed in the resources. If you have any questions you can attend the office hours, which are from 6 to 7 pm IST, to resolve any of your doubts.				
Why make the form in n8n? Any advantages or ok to use an existing form?	You can use google forms etc as well. n8n form is not mandatory				
How is n8n related to ai?	n8n has a node called " AI Agent " which lets us use AI inside our workflows				
Where did you create Form in n8n?	click on the plus icon and search for n8n form and select it and then the form trigger and then you have it				
can we also validate email is correct?	we can add that validation				
How to use Google form instead of n8n form?	you can use a trigger node called Webhook and make your google form send the submission to this webhook which is just a url				
Are the Q & A Questions and Answers listed in the resources for others who might have had the same type Questions? I am trying to pay attention to both at the same time	Hey, not the q&a are not included in resources If you have any question you can attend office hours from 6-7pm IST for all your doubts.				
It gives us the option to build an autonomous agent as well. Are we better off doing that in Lyrz and then bringing that into n8n?	those are separate applications. you wouldn't use them together. n8n can be used to create autonomous agent.				
I guess we could've added attribute "required" to the fields to avoid empty check later?	yes that would work				
So, if I am building a form, I build it here and connect to my website, rather than using a form inside WordPress (which is what I use) in order to have this automation done? Or, can we use an existing form we built (e.g. WP Forms) and connect it in n8n and then execute the automation?	Build it in Lyrz if you need enterprise guardrails and deep agent testing, but stick entirely to n8n if you want simpler management and direct API connections in one place.				
n8n now allows to create workflows without doing these steps. We just need to write the prompt once. Is that correct?	yes sure it is				
can you repeat					
If empty what happens	it will fail the if step				
So I have to have an n8n plugin do handle this process in my website?	Yes but you need to embed the n8n form on the website or figure out a way to get your website form data to n8n. Then you can start building the workflow in n8n.				
Can we get step by step instruction for how to do self hosted n8n since its not going to be covered in the session and we are just covering the cloud one?	here's a link on how to self host. its very easy. https://docs.n8n.io/deploy/host-n8n				
Is that the mistake — else the loop will not close	can you clarify your question?				
you should select project field element					
my zoom workplace is not working and i'm only able to see through the browser today	it is okay it won't keep you from tracking with us in the breakout rooms				
100					
can i use 2 test data sets	we can only use one at a time.				
Could you add the check for empty as a pre-condition before you submit the form?	yes, you can make it required, but someone can type " " into it and its still blank				
Got it					
whats the difference between both	Fixed fields hold static, hardcoded text that never changes, while expressions dynamically pull or transform live incoming data using code like {{ \$json.name }}.				
will there be a breakout class today?	yes sure there will be				
It can't never be empty because you have made them compulsory to fill other wise submit button won't work	you are right				
does the breakout class work on the browser?	yes sure we will use all on the n8n cloud on the browser				
So, instead of going and putting a check if the project briefing area is empty, you could have done that in the form itself as an attribute. Add an attribute which says "required field". Currently, the required field cannot be empty. This whole stuff of checking itself could be skipped, isn't it?	yes this is possible. We wanted to show what an if statement does.				
Can we connect claude pro account to n8n?	yes you can use n8n mcp and connect it from claude connectors				
So the n8n is free but we have to pay for an AI or LLM, right?	n8n cloud is not free (only first 14 days) but the local host one yes it is but it is a bit technical				
how did we get to open ai	just search for a node called openai model and connect it with the chat model branch from the ai agent node				
But can you show with a live website and bigger data set please atleast 50-100 data sets ?	n8n can use much bigger data sets. 50-100 is no problem.				
any reason LLMs doesn't offer subscription fees, unlike agents offering?	llm api's all use pay as you go				
If we already have a paid subscription, can we use Chat GPT version?	paid subscriptions are completely separate. they do not come with any api credits.				
But connecting openAI would be paying twice since we already might have subscription. how can we connect our subscription so we are not paying twice? Is it possible only by connecting n8n mcp on chatgpt? and then to build n8n workflow it can only be done on chatgpt?	yes, you will need to pay twice. API fees can be very minimal. There is no way to use the chatgpt subscription in n8n.				
But connecting openAI would be paying twice since we already might have subscription. how can we connect our subscription so we are not paying twice? Is it possible only by connecting n8n mcp on chatgpt? and then to build n8n workflow it can only be done on chatgpt?	the subscription won't let you use open ai models in n8n you need a different pricing which is credits				

where eis the Platform Home Page	do you mean n8n? go to n8n.io
In that case we could connect n8n to the paid claud or GPT subscription and use teh available tokens	subscriptions on claude and openai are completely separate from the API. subscriptions cannot be used in n8n. You need to pay as you go
any open source LLM that can be used?	yes, ollama
is there open source LLM that can be used	sure, you can look into ollama
if you use N8N installed in your desktop, will it consume tokens?	it will consume openai tokens
if you use N8N installed in your desktop, will it consume tokens?	no it is not a model but using openai wherever will consume credits
why we are not using google gemini as a LLM for these sort for purpose as these are mostly free?	we can use gemini for this as well. Costs are similar
My question is rather than showing 1 data set example to be taught it should be showing a live website feedback section linking with n8n to create this example.. Hence i was asking can you show a real / realish example than this one.. This will only be more confusing when we practice !!!	this is our example for today and we will have another example tomorrow.
How do we know a model doesn't work well?	You can look at the answer it gives and choose if you like the answer or not.
What does big brain / high intelligence in model practically mean? Are they better trained so are better predictors?	yes, they are better predictors, and better trained. Higher intelligenc ^t = higher cost
Subscription works as we know we are paying at max \$20 per month and then if we run out of credits we can wait till credit reset and start using again. That way we are capping the spend and also getting a lot of credits. In pay per use like open AI we might be aggressively using the prepaid "20 dollars" and then run out completely and not have any resets. How to navigate such issues and get comfortable with prepaid tokens?	the subscription is completely separate from the api. Your 20 per month does not count towards credits. you pay as you go for the api
Why did you select to Message a model rather than to use the Classify option?	the message a model is more general and easy to use
okay understood but that should be clarified by the instructor that today we are only doing a small one than a live example	
How did you get that prompt? generated by n8n or other LLM?	Another llm
still dont understand when to use fixed when to use expression	fixed will be for typing text and expression will be for passing in a field into the box. We havent done that yet.
then how this classify as no before this before adding dynamic input? what is difference?	It just guessed without any context.
Is "switch" faster than "if" or does it use less/more memory or is it irrelevant?	they are both the same
Does n8n allow checking the routing rule function with another "variable field" on the form?	yes
(I mean - within the switch or if, to evaluate the condition)	you can use either, it doesn't matter
(or maybe, compare it with another metadata attribute from the flow at the global level?)	yes, this is possible
i want to classify my tickets in some organisation app, how woul i link it ot n8n	use zendesk it has a built in connection
In daily life, can we ask Claude co-work to build out those workflows or is this something we have to build ourselves?	cowork can help build these workflows, but has limits. you should also know how to build them yourself.
Could we have done create sheet?	you can have it create a sheet as well.
In this Project LLMs already do the same thing with Yes&No and No, so why are you adding Switch again? before switch we can add Google Sheet	we need switch to make the ai agent output has an effect of saying yes or No to swtich the workflow direction based on the output you will see how in the breakout rooms
can we use excel sheets as well ?	yes sure
But LLMs already do the same thing with Yes and No, so why are you adding swtich again? before switch we can add Google sheet	llms can do some of this, not all. n8n is more versitile. switch is used to determine if it is spam or genuine. We will do this example together in the breakout sessions today.
how to classify it spam or genuine enquiry?	the openai step determines if it is spam or genuine
Not able to follow google sheets please repeat	we will be doing this example again together in the breakout session.
As you map them, does it have allow transforming the data? with some inbuilt functions or otherwise?	yes sure it is dynamic it can accept words, numbers, symbols, etc.. automatically
can we use excel book as well ?	yes sure you can therare nodes for it already
where will the user fill the form - which website and how will that be added to n8n?	you can embed the form on any website
can you do breakpoints so you can follow it trthrough ordo you have to wait for completion?	you need to wait for completion
What happens if the field is empty?	then it will be passed through as blank
if project brief is EMPTY can we add to spam	yes, that should be spam
n8n account & open Ai credential will be the customer's in case i want to monetise in automation?	you can work on the clients account, or create your own account and build workflows for them.
How do you connect the form to the website?	in the form, there is a link. Embed it in html on your website
is the production url not coming from the website?	the url is coming form the form trigger node
What is the output path on AI Spam Classifier box, showing "Tools"?	it is to give the ai tools that it can use when needed based on its own judgement
4.1 works well for this	great!
This on form submission is for test only, right? For the production you need some google form or other form inside website Can I integrate this n8n form in webpage?	You can use n8n form in production
i dont understand	
can you put this link in the chat and we can fill	

In the example we built form on n8n, however in real life the form will be on actual company website from where the data will need to be pulled into n8n, correct?	Yes, you can use a webhook node instead of a form trigger
is there any slowness or delay when there is huge load in complex automations?	
If I already have a form how can I get that into n8n?	you will need to send a webhook request into n8n and the trigger node in n8n will need to be a webhook node
Can Alteryx be used for a similar work?	yes
Do we have breakout session today?	
Is it possible to use an external website form instead of the built-in n8n form trigger? If yes, how can I set this up?	yes, using a webhook node - the external website can send filled in forms to your n8n webhook URL
How to debug in case of troubleshooting?	
on my Website	yes, you can embed it in html on your website.
share an idea with 3 options for switch	
100	
you are using the n8n domain for the form. how to do it on my official website	You can put the url in html and embed it on your website.
if iam so new and cant think of a logic like the workflow chart can i ask claude or chat gpt giving the problem statement can it show me the workflow in chart format and then i can implement to use the automation on n8n	
95 - need practice	
80	
How to use domain name for URL?	
80%	
20	
(the box is showing RED with a triangle by the Tools output path	
What is the little triangle on the AI spam classifier node?	
?????	
Are there templates for workflows? Pre-built workflows that we can leverage so we are not starting from scratch every time?	
Can jitesh show how to use the link he shared ?	
will this stop running when it runs out of API key	
how do we learn about the different automation types like loops, multiple forms in a website where each has its own function eg: booking a lead for the event, enquiry form, meeting booking on calendly, etc	
Is "Build with AI" is something similar to work with "Lyzr"?	
Is n8n still relatable ?	sure it is great for hosting your workflows and forgetting about them
Can we invoke this AI-agent as a sub-agent from another master AI Agent?	sure you can do
I have a form already on my website and my question is how can I automate to get the filled in info from people into an excell cheat?	If you have a form already, you can use a webhook node in n8n.
10	
lets say the form exists on my clients website, it has already been built - how do I then connect an existing already built form to create automations	
Did not get how AI spam classifier automatically classifies lead into spam/ genuine	it is all in the ai agent prompt
Please show the feedback form	
is the workbook session also in the recording	
What about Privacy and Security?Would this be touched?	
Do I need to open the work flow on n8n?	
How to import the json to n8n?	
can i use self hosted n8n to practice it everyday	yes absolutely
my question is not answered.	
if iam so new and cant think of a logic like the workflow chart can i ask claude or chat gpt giving the problem statement can it show me the workflow in chart format and then i can implement to use the automation on n8n.	yes sure thats a good idea
how did you get the production url	click into the form node its at the top
in n8n	
Can you please once again explain difference between OpenAI credits vs paid Chatgpt subscription? Why is one used in the demo vs other?	this can be covered in breakout room
How many hours is it each evening forward since the 2 last days hav in total been more then 4 hours?	
Hey Jitesh, could you please share how to host locally? I remember in one of the sessions you shared a YouTube video. missed that.
