

Day 3 Office Hours Session

01:27 - 01:28

Audio shared by Sumedha: But in the other hand.

07:04 - 07:07

Sumedha: Hello, everyone! How is everyone doing?

07:09 - 07:17

Sumedha: The chat is open for everyone. Warm, warm, welcome to your first Office Hours on Day 3. How is everyone doing?

07:18 - 07:20

Sumedha: All good.

07:20 - 07:23

Sumedha: Great, very good.

07:23 - 07:42

Sumedha: Amazing. I'm also doing well, thank you so much for asking. And how is the energy in the room? So, you have already done two days, and today's the third day, and it's your first office hours. How is the energy? Is it high? Already tired? Very low? How is it?

07:46 - 07:49

Sumedha: Josh is high. Amazing. Sky high.

07:50 - 08:09

Sumedha: Great. I love the responses in the chat. Amazing. So excited to see that, how energetic you guys are. Okay, so... oh, it's already 10.30. Amazing. So nice to see you in the session, even though it's a very odd hour there in your place.

08:10 - 08:11

Sumedha: All right.

08:11 - 08:31

Sumedha: Okay, so just to set the context for today's office hours, so basically, for office hours, we will be taking all your questions in Slido, so the link is already shared in the, like, chat by our teammate, so you will be seeing a link.

08:31 - 08:38

Sumedha: which ones you click, you will get options to drop your questions. So, you will have to type in your questions.

08:38 - 08:41

Sumedha: And we will be taking in your questions.

08:41 - 09:01

Sumedha: As per the upvoting. So, any question you see in the Slido, which you also want to get answered, so just there, you will see on the right-hand side an option to upvote. So make sure you are upvoting those questions, because we will be taking the questions on the popularity terms, okay?

09:01 - 09:19

Sumedha: So, the Slido is open. You will have to go ahead and drop your questions there, and we have our amazing mentor, Harshith Vadipatharti, with us today, who will be taking up all the questions one by one on the basis of popularity. I hope this was clear for everyone.

09:20 - 09:24

Sumedha: A quick yes or no in the chat, if the process of office hours is clear.

09:25 - 09:26

Sumedha: Yes?

09:29 - 09:31

Sumedha: Alright!

09:31 - 09:45

Sumedha: Perfect. So with that, we can get started with our very first office hours. Go ahead, take your time, drop in all the questions. We will keep on turning on and off the Slido to manage the questions.

09:45 - 10:01

Sumedha: So that we can take up all the questions. Any question that is unanswered today, we will be taking it up tomorrow, okay? So with that, without any further delay, we will get started with our session. So, welcome, Harshith, to our office hours again.

10:01 - 10:06

Sumedha: And I will leave the session to you for the next couple of hours.

10:08 - 10:15

Harshith Vaddiparthi | Outskill: All right. Yeah, thank you, Sumedha, for such a lovely introduction, and hey everyone, how are you all doing?

10:15 - 10:39

Harshith Vaddiparthi | Outskill: Super, super excited, you know, to take the office hours today, right? And guys, one thing I do want to mention, this office Hours is not just for the sessions that we had. Anything about AI that you've come across, any questions that you think you might have, just go ahead and ask it. I am all here, you know, to go ahead and answer all those questions as well, right? So let me quickly just go ahead and share my screen. And once again, while we're doing this, I might not be looking at the

10:39 - 10:49

Harshith Vaddiparthi | Outskill: chat in this, you know, in the webinar chat section, guys. I'll only be looking at the, the Slido, so please make sure, whatever questions you have, please go ahead and post them on the Slido.

10:49 - 10:53

Harshith Vaddiparthi | Outskill: Right? So now let me just go ahead and quickly just go ahead and share my...

10:53 - 11:04

Harshith Vaddiparthi | Outskill: And once again, like Sumedha mentioned, these ranking of the questions, I'm not doing it, it's a Slido, so if you want some question to be answered first.

11:04 - 11:17

Harshith Vaddiparthi | Outskill: you see a small thumbs-up icon, right? Just click on that, and it'll just, you know, be upvoted, and that'll just pop up first, all right? So now that we understand everything, let's just go ahead and quickly get started with,

11:17 - 11:25

Harshith Vaddiparthi | Outskill: the very first question right here, and I'm gonna highlight it like this, alright? Now, let's get started, alright?

11:25 - 11:37

Harshith Vaddiparthi | Outskill: I don't know why I am unable to log into Canvas. I tried every method, but that's why I'm based in Indonesia. Okay, so if this is the question about the LMS,

11:37 - 11:58

Harshith Vaddiparthi | Outskill: please write an email to support at Outskill.com, or just reach out... reach out to one of the team members, and they'll be able to, you know, guide you there, right? So please do that. But again, let's keep this question more for AI and content-related questions, because I'm not super sure, you know, how to answer the dashboard and everything, the team will be able to answer that, so please.

11:58 - 12:05

Harshith Vaddiparthi | Outskill: Alright, now, does monetization favor content creation through AI or real human shoots?

12:05 - 12:29

Harshith Vaddiparthi | Outskill: Very, very good question here. I think this is after our very... yesterday's session that we just had, which was about video generation, AI video creation, all of that, right? So there's one question that comes up, is about monetization. Is monetization only for real human content, or for AI-generated content as well? So here's one thing, let me clarify. Monetization has nothing to do with

12:29 - 12:32

Harshith Vaddiparthi | Outskill: If it's either human-created or AI-generated.

12:32 - 12:46

Harshith Vaddiparthi | Outskill: right now, 90% of the content that you're actually seeing on YouTube, or all the different social media platforms is flooded by AI content, and even real humans are using some form of AI, right? So, it's not about

12:46 - 12:59

Harshith Vaddiparthi | Outskill: what tool you're using, and what methodology is it? Is it real human or AI? It's always about the value that you're able to add. I have my own newsletter as well. I write my own newsletter as well, and I do take help of AI.

12:59 - 13:10

Harshith Vaddiparthi | Outskill: AI scrapes everything, it goes ahead, you know, reads all the... reads all the, you know, news, the latest news information, everything. It comes back with a complete draft.

13:10 - 13:19

Harshith Vaddiparthi | Outskill: I change the draft, I add in a little bit about my pointers, and then I post it, but I'm still able to monetize it based on sponsorships that I get, right? So.

13:19 - 13:26

Harshith Vaddiparthi | Outskill: End of the day, it's about value creation. If you are able to create value out of it, it's gonna work out, right? That's it.

13:27 - 13:28

Harshith Vaddiparthi | Outskill: Okay.

13:28 - 13:48

Harshith Vaddiparthi | Outskill: The next one, how to connect plugins to ChatGPT. All right, for this one, let me just go ahead and quickly open my ChatGPT right here. Okay, so that's my ChatGPT, as you can see. This is kind of, you know, following the, I think, our very first, session, right, about plugins and plugins and MCPs and all of that. Once again.

13:48 - 14:11

Harshith Vaddiparthi | Outskill: Plugins are nothing but... the technical terminology for this is Model Context Protocol. It can connect any application into ChatGPT. Let me see if I still have my example open, which I've shown in the... in the session. Yes, it's right here. As you can see, we used Gamma, and we used Asana, right? And we have ChatGPT. How are we connecting them? We're using something called as a plugin, which is nothing but...

14:11 - 14:17

Harshith Vaddiparthi | Outskill: Model context protocol, right? Now, Let me just go back.

14:17 - 14:25

Harshith Vaddiparthi | Outskill: The way you do this is, make sure you open your left sidebar, and then click on the button that says, plugin, and you can see

14:25 - 14:48

Harshith Vaddiparthi | Outskill: plugins, everything right here. Now, if you want to connect to one of the tools, let's say if I want to connect with GitHub, all I have to do is click on the plus icon, and it's going to open up an authentication URL. It's, yeah, it's going to say this, continue to GitHub. So whatever tool you're using, it's going to have its own authentication. Once it's done, just sign in with that account, and you just have to say, connect with it.

14:48 - 14:57

Harshith Vaddiparthi | Outskill: That's it. Guys, that was honestly it. You can do the same thing with Gmail as well, everything. So that's how you connect all of these plugins into your ChatGPT.

14:58 - 14:58

Harshith Vaddiparthi | Outskill: Okay.

15:01 - 15:19

Harshith Vaddiparthi | Outskill: All right, the next one. For the first workbook, I got one picture consisting of about 12 slides or blocks. Is that correct? I was thinking it was to be a PPT. Once again, it doesn't matter what the output is.

15:19 - 15:32

Harshith Vaddiparthi | Outskill: The prompt that we have given inside Gamma was that we need a complete presentation out of that, and if you are getting a presentation out of it, that's about it. If you wanted to become a PPT, just mention that.

15:32 - 15:50

Harshith Vaddiparthi | Outskill: just mention that you want that PPT, it's gonna go ahead and create it. Maybe in that case, it's not going to be using Gamma. Let's say for the example that I'm just gonna take, let me just log into my Gamma and see if I can, you know, go ahead and share with you some of the, you know, the presentation that was created. Let me...

15:50 - 15:52

Harshith Vaddiparthi | Outskill: This, yeah, this, this is,

15:52 - 15:59

Harshith Vaddiparthi | Outskill: the onboarding process, okay? It takes a little bit of time to onboard, guys, but what I'm trying to tell you guys here is that

15:59 - 16:18

Harshith Vaddiparthi | Outskill: it doesn't really matter what the output is. If you want the output to be in a PPT, ask ChatGPT to give it to you in a PowerPoint presentation, that's it. You can ask it not to use the Gamma application and ask it in a PPT, it's gonna give it to you, right? So one thing you have to understand is.

16:18 - 16:21

Harshith Vaddiparthi | Outskill: Whatever output you're seeking.

16:21 - 16:36

Harshith Vaddiparthi | Outskill: mention that to ChatGPT, it's gonna give it to you, right? That's all. And if you specifically need it on Gamma, make sure Gamma is completely installed, and let's say if you create a new chat, one thing you can do is do Shift 2, which is basically add at.

16:37 - 16:37

Harshith Vaddiparthi | Outskill: Ag?

16:38 - 16:39

Harshith Vaddiparthi | Outskill: Gamma.

16:39 - 16:42

Harshith Vaddiparthi | Outskill: That's all. Tag gamma, and now you mention...

16:43 - 16:46

Harshith Vaddiparthi | Outskill: create this in a 12-slide PowerPoint for me.

16:47 - 16:48

Harshith Vaddiparthi | Outskill: That's all.

16:48 - 16:54

Harshith Vaddiparthi | Outskill: is go ahead and give it a prompt, and then it's gonna go ahead and do it, right? So that's the approach I would want... I would suggest.

16:55 - 16:56

Harshith Vaddiparthi | Outskill: Okay.

16:57 - 17:04

Harshith Vaddiparthi | Outskill: Okay, Kumar, again, nice to see you in the office hours as well. I think you were yesterday, you were in my breakout room. Good to see you here. Okay.

17:05 - 17:19

Harshith Vaddiparthi | Outskill: I hear Vivek talking about code being put in GitHub from where people can download and thereby avoid costly subscriptions. He also talks about Mammoth for combined access to

17:19 - 17:38

Harshith Vaddiparthi | Outskill: tools. Any idea if it's worth getting these subscriptions over individual ones? Any recommendations? Okay. So, I think it's a two-part question. Number one is GitHub. So, how are people pushing or, you know, putting code on GitHub? Exactly how we've just done it here. Let's say if I just go to GitHub.

17:39 - 17:45

Harshith Vaddiparthi | Outskill: Now, it's already connected to my GitHub account. If you do not have a GitHub account, I would suggest go ahead.

17:46 - 18:02

Harshith Vaddiparthi | Outskill: Create a GitHub account at github.com, and as you can see, if I just go ahead and show you my GitHub account, I have, like, a ton of, you know, something called as repositories. The codes is something called as repositories, and it's free to upload, it doesn't cost you anything, and once again, guys.

18:02 - 18:10

Harshith Vaddiparthi | Outskill: I used to think, and once again, I'm a complete non-coder myself, right? I used to think, okay, GitHub is, like, for all these, you know, developers and coders.

18:10 - 18:16

Harshith Vaddiparthi | Outskill: Trust me, it's not. It's also for non-coders as well. If you want to push some kind of, code to it.

18:16 - 18:33

Harshith Vaddiparthi | Outskill: you can go ahead and push it. You can go ahead and upload it, right? You can see a new button right here. You can create a new project. Once the new project is created, you can go ahead and upload the code onto that. Once again, you don't need to have any technical knowledge.

18:33 - 18:41

Harshith Vaddiparthi | Outskill: just connect the plugin, it could be on ChatGPT or Cloud, and just go ahead and push the code. So, pushing is the term that we use.

18:41 - 18:46

Harshith Vaddiparthi | Outskill: And the second path is, talks about mammoths for combined access to tools.

18:46 - 19:04

Harshith Vaddiparthi | Outskill: You can look into it, it depends on what you're actually looking for. If it's giving you, like, a nice package or a nice offer, please go proceed with it. Or if you want something like individual, if you just want to test out Claude, or if you just want to test out, you know, ChatGPT first, you can do individual as well, but it honestly depends on your workflow.

19:04 - 19:11

Harshith Vaddiparthi | Outskill: Right? Look into your workflow, see what are all the tools that you're actually using, see if it adds value to you.

19:12 - 19:13

Harshith Vaddiparthi | Outskill: Then go ahead and proceed with it.

19:15 - 19:34

Harshith Vaddiparthi | Outskill: Alright, the next one. Zahir has a question. I've been using ChatGPT very extensively, and it's more than a year it has accumulated so much of information. Can you please help me understand if we have any shared memory options so that I don't get dependent on ChatGPT?

19:34 - 19:44

Harshith Vaddiparthi | Outskill: Later, if I move to Claude, Claude should be able to access the data. So he absolutely made the question, and that's exactly what I used to struggle with as well, because

19:44 - 20:01

Harshith Vaddiparthi | Outskill: I don't want to depend on tools, right? I just want to, you know, have my memory, have my, you know, accumulated information by myself. I don't really want to depend on either Claude or ChatGPT, right? So I'm just gonna, you know, add pointers to what Karma just asked. Karma mentioned about

20:04 - 20:22

Harshith Vaddiparthi | Outskill: GitHub, right? So here's how you do it. So, Zahir, do this, and this is what I genuinely recommend to you, right? So, let's take this as an example, Zahir, okay? This chat has information about me, right? So I'm just gonna ask it, you do have some memory about me, right?

20:23 - 20:27

Harshith Vaddiparthi | Outskill: in... You just give me some...

20:28 - 20:44

Harshith Vaddiparthi | Outskill: professional info. I hope it doesn't even reveal all my chat history, but I'm just trying to ask it to keep it, you know, professional. Okay, I think it does have my information, right? Now, as you can see, it has all of my information, you know, what I do, blah blah blah, right?

20:44 - 20:48

Harshith Vaddiparthi | Outskill: here's what you proceed with, Zaheer. Now, you say.

20:48 - 21:00

Harshith Vaddiparthi | Outskill: you tag the GitHub plugin, and then you say, This info is great, Can you create a... older.

21:00 - 21:06

Harshith Vaddiparthi | Outskill: on my GitHub called, Knowledge Base. Knowledge Base.

21:07 - 21:10

Harshith Vaddiparthi | Outskill: Knowledge base, and push this

21:11 - 21:18

Harshith Vaddiparthi | Outskill: to that, that's it. You just have to do that. Zahir, is that making sense? All I'm trying to do is

21:18 - 21:36

Harshith Vaddiparthi | Outskill: See, GitHub is something that I own. Doesn't matter if I'm on ChatGPT, doesn't matter if I am on Claude, I can be on GitHub. If my information stays on GitHub, tomorrow, if it's DeepSeek or Claude, I can go there, and I can simply tag that plugin and say, hey.

21:36 - 21:48

Harshith Vaddiparthi | Outskill: look into my... Guys, I've been working on, like, a trading bot for Kowshik, so I can just say, look into my trading bot, and get the information, and let's work on it.

21:48 - 21:58

Harshith Vaddiparthi | Outskill: Right? So that's it. Your information stays on GitHub, and your tools can be anywhere. So that's... that's what I would say, Zaheer, right? Yeah.

21:59 - 22:00

Harshith Vaddiparthi | Outskill: Okay.

22:00 - 22:02

Harshith Vaddiparthi | Outskill: Next one. Okay.

22:03 - 22:09

Harshith Vaddiparthi | Outskill: Subhankar, okay. Subhankar has a question. In yesterday's session.

22:09 - 22:14

Harshith Vaddiparthi | Outskill: we are showing only paid tools. If we need to take paid subscriptions.

22:14 - 22:38

Harshith Vaddiparthi | Outskill: clearly, clearly call that out, and also give us, good deals so that it becomes affordable. This is my honest feedback, and I'm looking for guidance here. Okay, Subhankar, I think we do mention that if it's a paid tool, we are very upfront about it, that it's a paid tool, right? And one thing that you have to understand is, Subhankar, initially, when I started off, I used to think, okay, it's a paid tool, how do I get started, and so-and-so.

22:38 - 22:41

Harshith Vaddiparthi | Outskill: Right? Ja Banker, what I would recommend is

22:41 - 22:52

Harshith Vaddiparthi | Outskill: Understand the skill. If you get the skill, because you already have the skill of video generation, I think I've seen some really good Aura Beans videos on LinkedIn as well. Prabhu, now if you have the skill.

22:53 - 23:03

Harshith Vaddiparthi | Outskill: It doesn't matter what tool it is, you can use your skill on XField, on Priya AI, on Vanvideo, on whatever the tool it is.

23:03 - 23:18

Harshith Vaddiparthi | Outskill: Right? And, Subhankar, let me be very honest about how I do things, because I, you know, also create a lot of AI video generation as well for my clients. So what usually happens is... I mean, I'm giving you an idea, right? So what usually happens is, let's say if I'm, you know, creating

23:18 - 23:27

Harshith Vaddiparthi | Outskill: AI video generation, or let's say the Aura Beans example itself for my client. What usually happens is the client actually pays for the credits.

23:27 - 23:30

Harshith Vaddiparthi | Outskill: Right? And they want your skill.

23:30 - 23:34

Harshith Vaddiparthi | Outskill: They are paying you for your skill of video creation and your taste.

23:34 - 23:52

Harshith Vaddiparthi | Outskill: but the tools, maybe they can provide. So this is one example I'm giving you on how I deal with, you know, clients, and just maybe a roadmap for you. But yes, if any feedback, please do drop it in the, you know, please do type into, you know, support at Outskill.com, but these are just pointers that I just wanted to share with you.

23:52 - 24:11

Harshith Vaddiparthi | Outskill: Okay, my question is, yesterday, Udem told he will share the skill which he created from Vivek Top 10 Viral Deals. Please share the same so that, we can map the clock. Second question is, yesterday, in Pagan, we can train our own voice, upload 5-minute, then why...

24:11 - 24:21

Harshith Vaddiparthi | Outskill: do we need to do again on 11 Labs? Okay, two questions. The first one, Subhankar, I would say this one, all the tools, everything would be

24:21 - 24:38

Harshith Vaddiparthi | Outskill: shared in your LMS for sure. Please do give the team a little bit of time. I think they will be uploading it within 12 hours, so don't worry about that. Everything will be in the LMS, right? Now, the second part of the question, if Hygen already has voice cloning, why are we using 11 Labs?

24:38 - 24:49

Harshith Vaddiparthi | Outskill: It just depends on which tool is really good for what, right? Number one is Ajen is a very, very, very good voice. Sorry, it's a very good, video cloning tool.

24:50 - 25:02

Harshith Vaddiparthi | Outskill: a lip-sync tool and a video generation tool, right? That's what Hygen is really good for. Of course, it can do voice cloning as well. You can just put a 5-minute audio and it can do it. It's good.

25:03 - 25:07

Harshith Vaddiparthi | Outskill: But the reason, again, the reason we are showing you 11 Labs is also

25:07 - 25:21

Harshith Vaddiparthi | Outskill: what more can you do with it, right? Let's say you only want to generate voice. In that case, you proceed with 11Labs, because right now, 11 Labs is the best audio creation platform out there.

25:21 - 25:28

Harshith Vaddiparthi | Outskill: Second is, of course, Phish. Fish Audio, I don't know where it came from, boom, it picked up. I think it's because of the cost and everything.

25:28 - 25:38

Harshith Vaddiparthi | Outskill: I use my own open source tool, which is called, VAN Audio 2, I guess. I forgot what it's called. Quen, Quen, Quen, sorry. Quen...

25:39 - 25:41

Harshith Vaddiparthi | Outskill: When audio 3. Quen Audio 3.

25:41 - 26:05

Harshith Vaddiparthi | Outskill: I use Quen Audio 3. It's an open source tool which I just run on my GPU to clone my voice. Again, see, Subhankar, take this as, you know, different tools that you can experiment with. If you don't want to do voice cloning on 11 Labs, you can just stick

with AGen, but of course, it's an extra tool you're learning, which you can apply to different use cases, because some use cases might not need

26:05 - 26:08

Harshith Vaddiparthi | Outskill: video. There, you use 11 laps.

26:09 - 26:15

Harshith Vaddiparthi | Outskill: And of course, you can tone your voice on in Devon Labs and import it on Hagen as well, so multiple things you can do right now.

26:16 - 26:22

Harshith Vaddiparthi | Outskill: Okay. I've been able to capture the Q&A from the breakout room. It allows me to highlight

26:22 - 26:34

Harshith Vaddiparthi | Outskill: But then I cannot copy, and then, when the session is closed, it's gone. Could you kindly compile at least the Q&A? You're 99% perfect, PS, I asked this on day one and day two, never had an answer.

26:34 - 26:57

Harshith Vaddiparthi | Outskill: Okay, so again, these questions, the operational questions, guys, I would please, please recommend not put in this chat, because I would not be able to answer it. I would still ask you to just go to support at Outskill.com, because I'm not fully sure about that. So please, please do that, and also some things that Zoom might not, you know, allow or something. I would recommend, you know, just as a recommendation, I would say maybe try out the

26:57 - 26:58

Harshith Vaddiparthi | Outskill: the Zoom...

26:58 - 27:17

Harshith Vaddiparthi | Outskill: companion application, you know, it's on the Zoom app itself, it's an AI thing, you can just, you know, ask it for questions, you can do that, or maybe you can have your own meeting notes taker as well, so that's something I try to use. I use Notion meeting note taker, and I use Granolo as well. Again, I'm just giving you options.

27:17 - 27:21

Harshith Vaddiparthi | Outskill: But if you have anything specific, please reach out to support at Outskill.

27:22 - 27:23

Harshith Vaddiparthi | Outskill: Support at Outskill.com.

27:25 - 27:27

Harshith Vaddiparthi | Outskill: Okay, for today's NA10 session.

27:27 - 27:47

Harshith Vaddiparthi | Outskill: what setup is required? Honestly, right now, all you really need is just go get yourself an NA10 account. Very simple. Just go ahead, sign up to NA10.io, create an account, you'll get a 14-day free trial. That should be enough for this entire, you know, sessions, or, you know, all the next 14 days, so that's about it.

27:47 - 27:49

Harshith Vaddiparthi | Outskill: Nothing else required for now. Okay.

27:49 - 28:09

Harshith Vaddiparthi | Outskill: Can AI be used for digital marketing? Are there any tools in your workflow? Yes, in my workflow, there are actually a ton. So, one very important use case that I actually use is basically, something called as post-its. I don't know how to pronounce it, but it's Post-Its, Post-Its.

28:09 - 28:18

Harshith Vaddiparthi | Outskill: Okay, so this is basically the thing, right? So the way I use it for my marketing is, number one, I connect it with all my, you know, all of my social media platforms.

28:18 - 28:38

Harshith Vaddiparthi | Outskill: The next thing is, the way I operate is, I, you know, I said my AI creates my own newsletters, it writes these own newsletters, and for that, I use something called as Resend.com. It programmatically... okay, I'm just gonna mask out the emails. Sorry, I think they're all my subscribers' emails. So...

28:38 - 28:54

Harshith Vaddiparthi | Outskill: use something called as Resend.com. It can programmatically send out emails, that's one thing. Another thing what I would suggest is, let me just open my, quickly, my website. What I usually do is, if you just go to the blog section.

28:54 - 29:03

Harshith Vaddiparthi | Outskill: So, if I just open the latest blog, this is just not the blog. This is basically the newsletter, which has also been pushed

29:03 - 29:08

Harshith Vaddiparthi | Outskill: Using the GitHub integration, Onto the website as well.

29:08 - 29:09

Harshith Vaddiparthi | Outskill: Right?

29:09 - 29:31

Harshith Vaddiparthi | Outskill: So that's something that I would recommend. Make it in such a way that you are combining all your tools, and, you know, you're creating it a much... very clear manner, where you're pushing all your code, all your, you know, workflow, all your marketing pointers on different platforms. So right now, don't have to stress about all of these.

29:31 - 29:46

Harshith Vaddiparthi | Outskill: just look into a tool which can, you know, integrate with, you know, which can integrate with your agent. Right now, it can just be Postis. It can just, you know, schedule automatically up to 30 social media platforms. That's one thing that you can do, so...

29:46 - 29:49

Harshith Vaddiparthi | Outskill: That would be my one recommendation, just to get started.

29:51 - 30:03

Harshith Vaddiparthi | Outskill: Okay, the next one. How should someone decide what's the right AI tool for prompting and automations, and essentially getting things done that add value

30:03 - 30:20

Harshith Vaddiparthi | Outskill: How should someone decide what's the right AI tool for prompting and automation, and essentially getting things done that add value? ChatGPT, Claude, Gemini, and now Muse by Meta. The tools and capabilities change so fast. How do you pick or juggle between multiple tools?

30:20 - 30:31

Harshith Vaddiparthi | Outskill: For various use cases. Okay, so let me be clear, right? Doesn't matter. It doesn't matter if you're using ChatGPT, Claude, Gemini, or Muse. ChatGPT has its best model, which is GPT-6.

30:31 - 30:42

Harshith Vaddiparthi | Outskill: Claude has its best model, which is Fable 5.1. News... I don't know what Muse is doing, honestly, it just came out, right? There are so many tools right now. See.

30:42 - 30:47

Harshith Vaddiparthi | Outskill: Guys, once again, don't hyper-focus, hyperfixate on these tools.

30:47 - 31:00

Harshith Vaddiparthi | Outskill: Understand the methodologies. Now that you understand meta-prompting, now that you understand MCP servers, now that you understand plugins, if you understand these concepts, if you have this skill within yourself.

31:00 - 31:19

Harshith Vaddiparthi | Outskill: no matter what tool comes in next, no matter what AI, you know, LLM comes in next, it could be GPT-6 now, or GPT-7 later, whatever might come out, you still have the skill of meta-prompting with which you can just go ahead and extract the best value out of these models.

31:19 - 31:21

Harshith Vaddiparthi | Outskill: Right? So please focus on that.

31:21 - 31:33

Harshith Vaddiparthi | Outskill: And again, I would try to backtrack and tell you one very important thing. Look into your existing workflow. Look into your existing workflow, see where you're putting in the most amount of manual work.

31:33 - 31:39

Harshith Vaddiparthi | Outskill: run that through ChatGPT, and just say, help me build a clear-cut automation for this.

31:39 - 31:44

Harshith Vaddiparthi | Outskill: And that's it. That's how you proceed with this. That's how you would approach this.

31:45 - 32:00

Harshith Vaddiparthi | Outskill: Okay, the next one. In NA10, is NA10 an enterprise product? Can I sell it to customers like banks and government entities? How secure is it when connecting to back-end database or applications? I'm mostly concerned about security. Again.

32:00 - 32:05

Harshith Vaddiparthi | Outskill: good to be concerned. Let me be straight up honest with you. Yes, NA10 is a...

32:05 - 32:21

Harshith Vaddiparthi | Outskill: enterprise-grade product. I think they're valued at about \$14 billion at this point, and one very important thing, why... how does it... how does it, you know, how... how can I just, you know, call it out as an enterprise-grade product? It's because of its security itself. What do I mean by that?

32:21 - 32:26

Harshith Vaddiparthi | Outskill: If I just go to NATN.io right now, NA10 website.

32:26 - 32:40

Harshith Vaddiparthi | Outskill: If you see the button here, guys, does this logo sound... look familiar? Right, that's the GitHub icon. If I go ahead and click on that, you can see the entire codebase of NA10

32:40 - 32:45

Harshith Vaddiparthi | Outskill: Fully open source, that anyone can go ahead and run on their own servers.

32:46 - 32:58

Harshith Vaddiparthi | Outskill: Do you see that? About 200,000 people have already starred this. They're already using this. Again, this is only the number of stars. Imagine the number of users, number of people who are running this on their

32:58 - 33:00

Harshith Vaddiparthi | Outskill: local servers.

33:00 - 33:23

Harshith Vaddiparthi | Outskill: So you do not have to depend on the website version. You can just download the codebase, run it on your server, and use that as an enterprise level. And yes, the reason I'm so, you know, confident about this is because I do serve enterprise clients as well. I do work with a ton of enterprise clients based in the US. I just recently closed a signage company, which

33:23 - 33:27

Harshith Vaddiparthi | Outskill: completely runs on Microsoft Enterprise, right?

33:27 - 33:34

Harshith Vaddiparthi | Outskill: And it can just integrate with them as well. Let me just show you an example of what I do have. I think I have my own,

33:35 - 33:49

Harshith Vaddiparthi | Outskill: Na10. Yeah, that's my very own, I just have to connect it. The container is dropped. But yes, I have my very own website where I host my own NA10. That's an example.

33:50 - 34:04

Harshith Vaddiparthi | Outskill: Okay, the next one. Can, can you suggest value-added tools? Like, I see Claude is used more often, Chad JPT, like this, can at least top 5 tools could help us?

34:04 - 34:15

Harshith Vaddiparthi | Outskill: Maybe you can create a page or link for different personas and drop, right? Okay. So, guys, once again, see, the question is correct, but I would say it's slightly in a different direction.

34:16 - 34:18

Harshith Vaddiparthi | Outskill: I do understand you're seeking tools.

34:18 - 34:26

Harshith Vaddiparthi | Outskill: But it's not about ChatGPT or Cloud, guys. Guys, these are just LLMs, these are just models, these are just apps.

34:26 - 34:41

Harshith Vaddiparthi | Outskill: But, I'm not gonna leave you hanging. How do you find the best AI tools that are coming every single day? What are the top tools? I'm gonna give you two

resources right now. Please, please make a note of them right now, okay? Number one, it's gonna be...

34:43 - 34:44

Harshith Vaddiparthi | Outskill: product hunt.

34:45 - 34:48

Harshith Vaddiparthi | Outskill: Guys, I repeat that, product hunt.

34:48 - 34:51

Harshith Vaddiparthi | Outskill: ProductHunt.com is a website

34:51 - 35:08

Harshith Vaddiparthi | Outskill: Where every single person, you know, every single, you know, indie hacker, or, like, a, you know, website builder, or, like, an app builder, or even billion-dollar companies, they upload or publish their latest tools on this platform.

35:08 - 35:09

Harshith Vaddiparthi | Outskill: For example.

35:09 - 35:22

Harshith Vaddiparthi | Outskill: Guys, look at that. Gemini has just launched a Gemini... Google has just launched GPT 3. Gemini 3.8, and they have just published that on Product Hunt as well. You can just check out, hey.

35:22 - 35:36

Harshith Vaddiparthi | Outskill: top, top products that are trending today, you can look at that. ZV router, AppRite, Toki Coordination, so and so, right? Again, you have your answer right here, right? You can look into whatever the tool that you want, and of course.

35:36 - 35:56

Harshith Vaddiparthi | Outskill: you would also become capable of, you know, uploading and publishing and creating your own tools itself, right? So this is one tool I would recommend, it's called Product Hunt. I think the name says it all, right? You're hunting for the latest products, that's one. The next one is super cool, I love this tool. It's called... there's an AI for that.

35:57 - 36:02

Harshith Vaddiparthi | Outskill: That's it. It's called... there's an AI for that. Let me... let me type that in.

36:02 - 36:11

Harshith Vaddiparthi | Outskill: There's... there's an AI for that, okay? Look at that. So, guys, this is... this is so crazy. So, whatever you can think of, there's an AI for it.

36:11 - 36:17

Harshith Vaddiparthi | Outskill: So, they have to log in and everything, I mean... Okay, look at that. Auto-captioner.

36:17 - 36:32

Harshith Vaddiparthi | Outskill: Compete scan, right? There's so... okay, Naz.com, there are so many tools that are coming up, guys. That's just asked me to log in so many times, yeah. Yeah, look at that, right? There's so many of these tools which you can scout through, and you can look into, and use whatever you want.

36:33 - 36:41

Harshith Vaddiparthi | Outskill: So that's what I would suggest. Okay, way too many pop-ups today. Cancel, cancel. Yeah, product hunt is cleaner, but there's an AI for that is also really cool.

36:41 - 36:42

Harshith Vaddiparthi | Outskill: Okay.

36:43 - 36:51

Harshith Vaddiparthi | Outskill: Next one. Giraj, I think you were also in my yesterday's session. I do remember your white headphones which you had, which were really cool.

36:51 - 37:09

Harshith Vaddiparthi | Outskill: Okay, while working on projects, whether content creation or VIP footing with AI, are there any standard techniques to optimize token usage, or tips to better utilize our credits, rather than trying to tweak prompts again and again?

37:11 - 37:13

Harshith Vaddiparthi | Outskill: Let me think. That is, that is, that is, that is.

37:14 - 37:26

Harshith Vaddiparthi | Outskill: Token... One second, guys.

37:28 - 37:29

Harshith Vaddiparthi | Outskill: Yeah, here it is.

37:31 - 37:32

Harshith Vaddiparthi | Outskill: Let me check.

37:33 - 37:50

Harshith Vaddiparthi | Outskill: There are two things, there are two of them. Again, yes, exactly, Patricia. Oh, also Patricia, I do remember you as well. I hope you were able to figure out your, you know, your worksheet. I hope that went well. Okay, there are two things here, okay? I'm gonna drop in this link right here. I think this is something that I use a lot.

37:51 - 37:54

Harshith Vaddiparthi | Outskill: It's called Token Optimizer.

37:54 - 38:08

Harshith Vaddiparthi | Outskill: That's basically what it does. It's called Token Optimizer. It's the entire GitHub you can see here. It has a ton of code, but I would really recommend you, is don't just, you know, run it on ChatGPT.

38:08 - 38:14

Harshith Vaddiparthi | Outskill: Install the ChatGPT desktop app, and then install this. Once again.

38:14 - 38:29

Harshith Vaddiparthi | Outskill: don't just do it on ChatGPT chat. Guys, I would say, you know, just move ahead from the ChatGPT web app, just try using the desktop application, because I think, like Dilip also mentioned, it has a lot more of, you know, access to your computer.

38:29 - 38:34

Harshith Vaddiparthi | Outskill: Right? That's, that's, that's, that's what it is. Yeah, Benjamin, yes, I'm gonna drop in the...

38:35 - 38:53

Harshith Vaddiparthi | Outskill: a website for that. There's an AI website, yeah, Benjamin, I like it the way you said it. I'm gonna drop that. But let me quickly, quickly try to show you how I can just do it. Okay, I've got a ton of things running on my desktop. I don't wanna, you know, mess up my memory, because it's just gonna stop and everything cancels out.

38:53 - 38:56

Harshith Vaddiparthi | Outskill: Just allow me a second, guys, just a second, just a second.

38:57 - 39:04

Harshith Vaddiparthi | Outskill: Let it load, let it load. Yes, let me share my entire screen right now. Okay, so now here's how I would go about it.

39:05 - 39:12

Harshith Vaddiparthi | Outskill: Simply copy this link, Open a new chat, Paste it and simply say.

39:13 - 39:30

Harshith Vaddiparthi | Outskill: Install this. That's it. Install this. Now, what it's gonna do is, it's gonna install this, GitHub or, like, an architecture or the methodology that will basically save you a ton of tokens. And who has this question? I think GIRaj asked this question, right?

39:31 - 39:41

Harshith Vaddiparthi | Outskill: Again, amazing, amazing questions, so this will definitely help out all the learners as well. So, amazing question right here, right? So, yeah, so please go ahead and do that. And,

39:41 - 39:51

Harshith Vaddiparthi | Outskill: Benjamin? Yeah, Benjamin, let me drop in the website, or there's an AI for that. Benjamin, it's good, but as you can see, it just gives you a lot of pop-ups, so yeah, just try to do that.

39:51 - 40:00

Harshith Vaddiparthi | Outskill: Yeah, let me, let me share the links again. Let me switch to everyone, share it again. Let me share Product Hunt as well.

40:00 - 40:02

Harshith Vaddiparthi | Outskill: And what else did I show you guys?

40:02 - 40:05

Harshith Vaddiparthi | Outskill: this, right? What else, what else did I show you guys?

40:06 - 40:09

Harshith Vaddiparthi | Outskill: Resend... One sec, one sec, yeah, resend.

40:09 - 40:17

Harshith Vaddiparthi | Outskill: Resend as well. Yeah, I've shared all the links, guys. Just please open the links and just go ahead and use it. Yeah, post it as well.

40:17 - 40:20

Harshith Vaddiparthi | Outskill: post is... yeah, Theo... yeah, that's where it is.

40:21 - 40:24

Harshith Vaddiparthi | Outskill: Post-its? Post is... I don't know how to pronounce it, but yeah.

40:24 - 40:25

Harshith Vaddiparthi | Outskill: Alright.

40:25 - 40:28

Harshith Vaddiparthi | Outskill: How much of the course will be talking about,

40:28 - 40:48

Harshith Vaddiparthi | Outskill: dealing with local LLM deployment. I think for this one, I would recommend, please ask this in the Q&A on the core structure and everything, but if you have any questions about LLM deployment, I can quickly answer that. So, if you want to do LLM deployment, all you really have to do is just go to something... a website called OLAMA.

40:48 - 40:51

Harshith Vaddiparthi | Outskill: Let me drop that in the chat as well. It's called Ol Lama.

40:51 - 40:55

Harshith Vaddiparthi | Outskill: And all you really have to do is click on Models.

40:56 - 41:02

Harshith Vaddiparthi | Outskill: Let's say you find a really cool model, and I would recommend you start with something like Gemma.

41:03 - 41:14

Harshith Vaddiparthi | Outskill: Where is Gemma? Okay, guys, it was just there, here, on the top last week. There are so many... Gamma, Gamma, sorry. There are so many, you know, tools coming up. Yeah, this is the one. What, 2 years ago?

41:14 - 41:17

Harshith Vaddiparthi | Outskill: That's crazy. No, that's not the one.

41:17 - 41:18

Harshith Vaddiparthi | Outskill: Comma?

41:19 - 41:21

Harshith Vaddiparthi | Outskill: Two weeks ago, yeah, this one.

41:21 - 41:27

Harshith Vaddiparthi | Outskill: this one, gamma4. I'm gonna paste it in the chat right here. All you really have to do is...

41:27 - 41:37

Harshith Vaddiparthi | Outskill: Let's... yeah, this is slightly a bit of a technical thing, but no, I wouldn't say technical. Guys, I don't want to scare you with something technical. I'm gonna take that back, okay?

41:37 - 41:51

Harshith Vaddiparthi | Outskill: See, now that I'm sharing my entire screen, you can see my actual MacBook configuration, which is memory 18GB RAM, right? So if I have an 18GB Ram memory, so I can run anything under 12 billion parameters.

41:51 - 42:02

Harshith Vaddiparthi | Outskill: of local models. So just copy this button, like, just, you know, click on copy and run this on your terminal, right? Once again, if you're finding all of this a little kind of, you know,

42:02 - 42:06

Harshith Vaddiparthi | Outskill: difficult to understand. It's okay if it happens if it's the first time.

42:06 - 42:09

Harshith Vaddiparthi | Outskill: Simply copy the link that I'm giving it to you right now.

42:09 - 42:17

Harshith Vaddiparthi | Outskill: open a new ChatGPT tab, paste it, and say, how do I download this on my Mac?

42:18 - 42:23

Harshith Vaddiparthi | Outskill: That's all. And just, you know, and give your NAG configuration as well. You can just, you know.

42:24 - 42:25

Harshith Vaddiparthi | Outskill: Paste that there.

42:25 - 42:27

Harshith Vaddiparthi | Outskill: And then, just ask it.

42:28 - 42:35

Harshith Vaddiparthi | Outskill: Again, guys, please just use ChatGPT for everything. Just make it your companion, right? It can help you out with a lot of things.

42:35 - 42:48

Harshith Vaddiparthi | Outskill: Okay, nice. Another question from Kama we have here. Another question, absolutely. When we were in the breakout room yesterday using Google Flow for videos, why did we update image aspect ratio

42:48 - 43:07

Harshith Vaddiparthi | Outskill: Why did we update image aspect ratio? Image, was created earlier. Can we have a different image aspect ratio and different one for generation? Yes, it's possible, Kumar. I think you also asked this in the chat, I'm sorry if I missed it yesterday, but let me, you know, kind of go over this one more time.

43:08 - 43:26

Harshith Vaddiparthi | Outskill: So while we were creating the image generation, right, let me go to yesterday's generation, guys, okay? So this is yesterday's generation, right? And I think what Kumar is talking about is the agent settings, the aspect ratio. For image generation, because we are not generating an image.

43:26 - 43:42

Harshith Vaddiparthi | Outskill: this doesn't really matter at this point, because we've already generated the images on Gemini, and we're bringing the images inside Google Flow. So here, all that matters is the video generation default. If you want to do 9S to 16, click on that, and then give it the prompt.

43:42 - 43:44

Harshith Vaddiparthi | Outskill: That's... that's what I would say.

43:44 - 43:51

Harshith Vaddiparthi | Outskill: Also, guys, really quick, funny thing I want to show you guys. In yesterday's session, which I generated, there are two hands for some reason.

43:54 - 43:59

Harshith Vaddiparthi | Outskill: Isn't that funny that, like, two hands... I hope you guys got better outputs than me. Okay.

44:00 - 44:09

Harshith Vaddiparthi | Outskill: Okay, the next one. I have generic questions about the course. Guys, again, post-related questions, please, please drop it at support at Outskill.com.

44:09 - 44:24

Harshith Vaddiparthi | Outskill: I'm understanding how to approach things and workbooks are fun too, but the question is the best approach with course materials so we can make the most out of it and learn each skill that the session has covered, or will cover, and master them? Okay.

44:24 - 44:30

Harshith Vaddiparthi | Outskill: Okay, I wouldn't say this is generic. I would say it's definitely a good question, in terms of,

44:30 - 44:35

Harshith Vaddiparthi | Outskill: You know, in terms of, you know, going ahead and learning anything. Learning anything, for that matter.

44:36 - 44:41

Harshith Vaddiparthi | Outskill: Guys, a tool that Google has built out, something called as Notebook LM.

44:41 - 44:46

Harshith Vaddiparthi | Outskill: Notebook LM. Guys, please, please use this tool. I use this tool a lot.

44:47 - 44:56

Harshith Vaddiparthi | Outskill: just go to notebook.google.com. I'm gonna go ahead and drop the link in the chat. How do you use this? The way you go ahead and use this is...

44:56 - 44:58

Harshith Vaddiparthi | Outskill: Create a new notebook.

44:58 - 45:04

Harshith Vaddiparthi | Outskill: Create a new notebook, and just call this notebook, let's say.

45:05 - 45:18

Harshith Vaddiparthi | Outskill: Outskill course, right? Just go ahead and call it that. And in the sources, go ahead and upload all the resources, all the worksheets, everything that you're getting

45:18 - 45:30

Harshith Vaddiparthi | Outskill: Right here. Once you upload that, you are building your very own, you know, your very own companion. Now, all you really have to do is just, you know, maybe create some slide decks.

45:30 - 45:47

Harshith Vaddiparthi | Outskill: create some audio overviews, and you can, you know, you listen to this entire thing in an audio conversation as well, or simply ask questions here. So that's what I would recommend if you want to do something, right? So let me give you an example of something that we did here.

45:47 - 45:54

Harshith Vaddiparthi | Outskill: Right? If I just go to something like video overview, you generated, I think... let me give you examples of something that already exists.

45:54 - 45:59

Harshith Vaddiparthi | Outskill: Look at that. You can distill the entire learning of what you have done

46:00 - 46:02

Harshith Vaddiparthi | Outskill: Let me play that audio for you guys.

46:03 - 46:04

Harshith Vaddiparthi | Outskill: As a complete.

46:04 - 46:10

Harshith Vaddiparthi | Outskill: You can distill that as a complete video that you can watch. Let me just play a couple seconds for you.

46:10 - 46:16

Audio shared by Harshith Vaddiparthi | Outskill: In the first quarter of fiscal year 2027, the global shipping industry faced simultaneous choke points.

46:16 - 46:33

Harshith Vaddiparthi | Outskill: Does that make sense, guys? All you really have to do is give it your resources. It can be your worksheets, it can be, you know, whatever you're learning. You know, maybe the notes that you're taking while the mentor is teaching. All your notes, just dump it inside one notebook.

46:33 - 46:37

Harshith Vaddiparthi | Outskill: And just create as many as you want. Guys, I'm gonna show you something which is gonna blow your mind.

46:38 - 46:39

Harshith Vaddiparthi | Outskill: Let me go back.

46:39 - 46:48

Harshith Vaddiparthi | Outskill: Guys, you can also create audio overviews, by the way, but why just stop there? Do you see a small button right there?

46:48 - 46:49

Harshith Vaddiparthi | Outskill: Click on that.

46:49 - 46:58

Harshith Vaddiparthi | Outskill: Right? The moment you click on this, you can have a podcast conversation with all your resources. Let me, let me quickly show that.

47:00 - 47:06

Audio shared by Harshith Vaddiparthi | Outskill: I want you to picture a map of the world for a second, just to... Oh, hey, I think our listeners got something to say!

47:06 - 47:17

Harshith Vaddiparthi | Outskill: Yes, I'm Harshith. Hey, I'm Harshith, and I just have a question about, what are the earning reports for FY... FY27? Can you... can you just give me a quick overview?

47:23 - 47:31

Audio shared by Harshith Vaddiparthi | Outskill: Well, that is a great question to jump in with. Yeah, you really caught us right as we were setting the scene. So, for the first quarter of fiscal year 2027, the results are actually rec...

47:32 - 47:51

Harshith Vaddiparthi | Outskill: Does that make sense, guys? The exact same thing, you can do it with your... all your resources, whichever you, you know, have in Outskill as well. So, dump them in the notebook and just work with them. And it doesn't consume credits, it's not... it doesn't work in terms of credits, it's like a Google product, so it's slightly different, so you can try that out.

47:51 - 47:52

Harshith Vaddiparthi | Outskill: Okay.

47:53 - 47:55

Harshith Vaddiparthi | Outskill: Huh, okay,

47:55 - 48:13

Harshith Vaddiparthi | Outskill: How to scrape Instagram for specific content, like my work-related topic, or anything specific. Not just viral videos, also how to find scraped viral videos on Instagram and TikTok. Okay, I'm gonna give you a resource, which is definitely gonna be a goldmine. It's something called as Appify.

48:13 - 48:20

Harshith Vaddiparthi | Outskill: API file, like, API file, Right? It's basically an app store for all the APIs.

48:20 - 48:27

Harshith Vaddiparthi | Outskill: Do you see that? So who asked this question? Okay, so whoever asked this question, you can see them right here.

48:27 - 48:46

Harshith Vaddiparthi | Outskill: Instagram scraper, TikTok scraper. Let's say if you want to go to Instagram Scraper, it's used by about 400,000 people. You go ahead and click on try for free. All you really have to do is just paste in the, you know, the Instagram account which you want to scrape, or whatever you really want to scrape, and it's going to go ahead and scrape it and give you all the information.

48:46 - 49:04

Harshith Vaddiparthi | Outskill: By the way, once you master NA10, you can connect Appify to your NA10 and do workflows just by scraping itself, right? A lot of cool things you can do at this point, guys. Or, simply just give the link to your Cloud or ChatGPT, and just ask it to work with it.

49:05 - 49:22

Harshith Vaddiparthi | Outskill: Okay, is there also a connector or tool that shows the number of tokens consumed or remaining on the typing bar of Cloud? I saw that yesterday, our mentor, Udeme Claude typing bar. There are a couple of tools. Number one is just,

49:23 - 49:29

Harshith Vaddiparthi | Outskill: So, let me... let me cancel this one. Just the clouds... let me delete this.

49:29 - 49:44

Harshith Vaddiparthi | Outskill: You can see the Claude's output consumption itself, it's completely right here. So, number of session, the amount of tokens that are consumed, and every single day, that's one. I mean, there are a ton of tools right now. Let me see. There's one thing called as,

49:45 - 49:51

Harshith Vaddiparthi | Outskill: token... consumer... tool...

49:53 - 50:01

Harshith Vaddiparthi | Outskill: for Mac. It's the same thing, it's the same thing for ChatGPT, yes. Yeah, there's one tool, guys, it's fully free, I've tried to use this.

50:02 - 50:20

Harshith Vaddiparthi | Outskill: It's a tool called Context Bar, where, yeah, it just shows you your weekly limit, your daily limit, and everything on, like, like here. There are so many of these tools at this point, and there are... and when I say open source, they're all free to use. You can literally run them on your, you know, your own,

50:20 - 50:28

Harshith Vaddiparthi | Outskill: Mac, or, you know, whatever you're using. So I use this as well. It shows you the number of tokens used and all that. I deleted it because...

50:29 - 50:30

Harshith Vaddiparthi | Outskill: I don't know why I deleted it, honestly.

50:31 - 50:32

Harshith Vaddiparthi | Outskill: I think I just have to install it.

50:32 - 50:52

Harshith Vaddiparthi | Outskill: Right? So, yeah, it's good to see all your tokens and everything on a weekly basis. So, to explore this, I would say, just type this in, you'll find a ton of these, token usage trackers, which you can just install for Mac. If you quickly want to get started, maybe this is something that,

50:52 - 50:53

Harshith Vaddiparthi | Outskill: They've been trying to use.

50:54 - 50:57

Harshith Vaddiparthi | Outskill: context, codex bar.app.

50:57 - 51:04

Harshith Vaddiparthi | Outskill: Yeah, again, don't just sit with this app. I think it's not that good of a UI. There are so many of these you can use, guys.

51:06 - 51:21

Harshith Vaddiparthi | Outskill: Okay, Prem has a question. Is it advisable to use multi-model platform like GetMulti.ai, as it allows access to multiple models, still economical than individual AI tools? I need your piece of advice. How efficient legal

51:21 - 51:39

Harshith Vaddiparthi | Outskill: to use the multiple models of AI. Legal, there's nothing illegal about it, right? Because if you're just using the tools, you can just use the tools. So this is out of question right here, right? You can just use the tools. In terms of efficiency, efficiency, I would say, yes, they're definitely much more efficient.

51:39 - 51:50

Harshith Vaddiparthi | Outskill: let me just open getmulti.ai. So guys, getmulti.ai is nothing but... it's one... it's a way to get, like, you know, multiple comparisons between, like, multiple different,

51:50 - 52:08

Harshith Vaddiparthi | Outskill: AI, you know, multiple different LLMs, right? So you can go ahead and use it. You can use something like DeepSeek also in this one. Whichever gives... whichever is cheaper and smarter, guys, at this point, you can just use. If you want another example, I would suggest looking to open router.

52:08 - 52:12

Harshith Vaddiparthi | Outskill: which has recently just been acquired by Stripe.

52:12 - 52:25

Harshith Vaddiparthi | Outskill: for, like, a billion dollar deal, right? It's crazy that Stripe has just acquired this. Within just two months... two, two years, they grew so much. So, you can just use one single API open router, you can switch between

52:25 - 52:35

Harshith Vaddiparthi | Outskill: any models. I would really suggest you can use DeepSeek also. DeepSeek is really good, right? There are a lot of, you know, a lot of different ones that you can go at, right? So do that.

52:37 - 52:48

Harshith Vaddiparthi | Outskill: Okay, next one, next one. Okay, can you explain more about GitHub? Okay, let me be a bit more clear about GitHub, right? So, guys, GitHub is nothing but

52:49 - 53:04

Harshith Vaddiparthi | Outskill: platform where you can publish your code, where you can publish or add your own research or documentation on it. It's actually used for code, meaning... let me give you a real example right here.

53:04 - 53:11

Harshith Vaddiparthi | Outskill: So my website, right, my website, Harshith.com, so that's my website right here.

53:11 - 53:26

Harshith Vaddiparthi | Outskill: But where does it live? Where is the code for the website? Once again, I've fully Vivecoded this using Fable, right? I've fully, fully wibe-coded this design. None of this is my own design. I've just kept, you know, making my design better.

53:26 - 53:29

Harshith Vaddiparthi | Outskill: But where does the code of this exist?

53:29 - 53:36

Harshith Vaddiparthi | Outskill: The code exists in my very own private repository here.

53:36 - 53:38

Harshith Vaddiparthi | Outskill: repositories?

53:38 - 53:46

Harshith Vaddiparthi | Outskill: My own private repository, as you can see, Harshith.com, that is the entire repository of my website.

53:46 - 54:02

Harshith Vaddiparthi | Outskill: Does that make sense, guys? It's my entire repository of my website, and it's kept private because I don't want to give out the code, you know, because I've

worked so much about it. You know, it depends, depends on what you do. If you want to make it public, you can. If you want to sell the code base, you can. You can do a lot of other things.

54:03 - 54:06

Harshith Vaddiparthi | Outskill: Okay, I hope that, you know, clarifies your GitHub question.

54:07 - 54:29

Harshith Vaddiparthi | Outskill: Okay, the next one, in real office scenarios, how can we use AI to learn and build hands-on skills in techniques like PySpark, SQL, AWS, Snowflake, Unix, etc? I don't know a particular technology. How can AI guide me step-by-step while working on real project tasks and help me become more confident using it?

54:29 - 54:42

Harshith Vaddiparthi | Outskill: Trust me, this is the best thing, right? I have just read this tweet. It's about Salesforce. There is someone who's been working in enterprise AI with Salesforce for the past 30 years.

54:42 - 54:43

Harshith Vaddiparthi | Outskill: And he mentions...

54:44 - 54:57

Harshith Vaddiparthi | Outskill: Guys, the difference between a newbie using AI and the most proficient person in enterprise AI with the past 30 years of experience is just 6 months. What does that mean?

54:57 - 55:04

Harshith Vaddiparthi | Outskill: Within just 6 months, using the help of ChatGPT and Claude, you can get as good as someone with 30 years of experience.

55:04 - 55:13

Harshith Vaddiparthi | Outskill: how to do that. I'm just gonna give you a quick gist, because, you know, we do have a lot of pointers and questions. I know, Patricia, it is definitely funny, and

55:13 - 55:31

Harshith Vaddiparthi | Outskill: That's kind of how I do about it as well. So I closed the enterprise client. I have no idea about, you know, a tool called ColdBridge that they're using. I just use ChatGPT for it, and I use something called as browser Automation, and I just asked my agent to do it, right? So that's how you do it. Now.

55:31 - 55:44

Harshith Vaddiparthi | Outskill: the process. How you do that is, what you do right now, okay? This is, you'll definitely learn a little bit more about this soon, but just to give you an idea, there's something called, as a platform called skills.sh.

55:45 - 55:50

Harshith Vaddiparthi | Outskill: So you go to that platform, right? Skin Start Ash. Now, let's say Snowflake.

55:50 - 56:09

Harshith Vaddiparthi | Outskill: let's say, Snowflake. Snowflake, enterprise, you know, grade, I think it's for database, right? Database, security, storage, all of that. Snowflake. There's Adobe Skill for Snowflake, okay. There is a skill for... okay, there's one. Snowflake Expert.

56:09 - 56:14

Harshith Vaddiparthi | Outskill: There is something called a Snowflake platform. Let's see, Snowflake...

56:15 - 56:18

Harshith Vaddiparthi | Outskill: Semantic view. That's good. Semantic view.

56:18 - 56:29

Harshith Vaddiparthi | Outskill: Okay, look at that. Build and validate Snowflake semantic views using Snowflake CLI and guided DDL creation and testing. I have literally no clue about whatever this means, but

56:29 - 56:39

Harshith Vaddiparthi | Outskill: Given the time and the codex tool, I can learn this within, you know, a couple of weeks, and, you know, be as good as anyone and use the platform. How do you do that?

56:39 - 56:45

Harshith Vaddiparthi | Outskill: Simply copy this command, go to plot.chatGPT,

56:46 - 56:50

Harshith Vaddiparthi | Outskill: Paste this command and be very, very, very honest with it.

56:51 - 57:10

Harshith Vaddiparthi | Outskill: hey, I just have to, you know, do something with Snowflake. I have never heard about this tool. It's very new to me. I've kind of heard about it, but it's... I thought it's something that boomers or some, you know, people use. I've never really understood that tool, but I want to use that tool. Can you go ahead and install this skill and

57:10 - 57:14

Harshith Vaddiparthi | Outskill: Can you help me out in using this... using this tool right now?

57:15 - 57:22

Harshith Vaddiparthi | Outskill: That's all. Just do that, and it's basically gonna do it, right? So, install those skills. Guys, skills are nothing but

57:23 - 57:28

Harshith Vaddiparthi | Outskill: All the skill, everything that a person has basically learned.

57:28 - 57:41

Harshith Vaddiparthi | Outskill: they have created that as a folder of system prompts. You can download those system prompts in your Cloud or ChatGPT, and use those, and you can basically use their own expertise.

57:41 - 57:58

Harshith Vaddiparthi | Outskill: And I'm not kidding, guys, it's a real, real thing which people are doing. And that's why, you know, it's kind of crazy that AI is getting so good, right? Guys, I'm not even kidding. I cannot do 3D modeling, I cannot do anything. I just ordered a 3D printer. I'm using GPT-6.

57:58 - 58:14

Harshith Vaddiparthi | Outskill: And I'm gonna create some, you know, 3D models, and I can just print it out, with zero experience about 3D modeling. I'll try to post them on my LinkedIn if I can. I think I posted... I got a Bamboo Lab A1, right? That's basically it, guys. Whatever it is.

58:14 - 58:25

Harshith Vaddiparthi | Outskill: Take the skill, put it on, and use it. Okay, I just got a Bamboo Lab, right? Let me show you another example. If I got a Bamboo Lab A1, there should be something for 3D modeling.

58:25 - 58:27

Harshith Vaddiparthi | Outskill: There should be something for 3D modeling. 3D...

58:28 - 58:34

Harshith Vaddiparthi | Outskill: Guys, what's the tool that's used? I'm not even sure what the tool is. I'll have to research about it. 3D modeling...

58:35 - 58:42

Harshith Vaddiparthi | Outskill: Blender, right? Blender... And there are a couple of other tools. So just Blender, just go onto Blender.

58:43 - 58:45

Harshith Vaddiparthi | Outskill: Copy that skill, Blender modeling.

58:45 - 58:47

Harshith Vaddiparthi | Outskill: Copy that skill.

58:47 - 58:52

Harshith Vaddiparthi | Outskill: put it on your plot, put it on your ChatGPT, and just work with it. That's it.

58:53 - 58:57

Harshith Vaddiparthi | Outskill: Miah, right? There's Miah, okay, thank you for that, Anushka. Maybe there's something else, Miah?

58:58 - 59:02

Harshith Vaddiparthi | Outskill: Right? That's basically how you can, you know, do that. Right?

59:02 - 59:10

Harshith Vaddiparthi | Outskill: again, I'm just, you know, throwing out ideas, I'm just throwing out what, honestly, I feel where we are at right now with, you know, AI, right? That's basically it.

59:10 - 59:26

Harshith Vaddiparthi | Outskill: Okay, next. Okay, you know what? Let me, let me quickly, quickly tell you another thing while we are at it. Wait, let me, let me quickly, quickly show you that, okay? Guys, Google just opened sourced a bee's brain. A bee, like a real bee, a fly. A fly's brain.

59:27 - 59:45

Harshith Vaddiparthi | Outskill: What I have done is, I have taken the entire brain map of the bee, I've taken it, and I've given it to my agent, and now my agent can build, you know, on top of the bee's brain. Guys, now we're at an intersection of technology and biology.

59:45 - 59:49

Harshith Vaddiparthi | Outskill: Right? So I've written a blog about it, and I'm sharing with you guys because

59:49 - [01:00:13]

Harshith Vaddiparthi | Outskill: You guys are such an amazing cohort, and you have so many good questions, so I'm just throwing out ideas, even though I'm taking way too long to answer questions, and I'm sorry for that. But okay, next one. I'm confused about how APIs work, and how do I connect, how do... how... how do I get the API... how do I get the keys to work? Also confused the NAT and workflow, we should help. Okay, NA10, don't worry about it, you have multiple sessions, you'll be learning about all of that.

[01:00:13] - [01:00:23]

Harshith Vaddiparthi | Outskill: API. The best, best way I can explain about API is API is nothing but a waiter. You'll be able to see this a lot, right? API is nothing but.

[01:00:24] - [01:00:37]

Harshith Vaddiparthi | Outskill: a waiter. What it means is, like, a waiter comes in, takes, you know, the order from, you know, an order from the customer, and gets it back to the kitchen. That's exactly how an API works.

[01:00:38] - [01:00:41]

Harshith Vaddiparthi | Outskill: It... API is like a key. It's a key...

[01:00:42] - [01:00:51]

Harshith Vaddiparthi | Outskill: Which helps you take information from the front end, go back to the server, run the process, and show it to you back again.

[01:00:51] - [01:01:09]

Harshith Vaddiparthi | Outskill: That's all you have to really understand. Now, how do you use APIs? You'll have different API keys for various different things. Let's say... let's say for the, let's say for ChatGPT API, you would have to go to... just type this in. ChatGPT

[01:01:09] - [01:01:29]

Harshith Vaddiparthi | Outskill: API. That's all. Just type that in, the first thing that comes up is API Platform. And you open that, you log into it, and you can create a key. That's all you have to understand for now. It'll just keep getting better in the next couple of days for you how to use this. But API is a unique key.

[01:01:29] - [01:01:31]

Harshith Vaddiparthi | Outskill: To access your tool.

[01:01:31] - [01:01:33]

Harshith Vaddiparthi | Outskill: Right? That is what you have to understand.

[01:01:34] - [01:01:35]

Harshith Vaddiparthi | Outskill: Okay.

[01:01:35] - [01:01:54]

Harshith Vaddiparthi | Outskill: Okay, Ramesh has a question. Why was Day 2 sessions so challenging, with limited step-by-step guidance and prom that were difficult to uncomplete given time, the hands-on experience was disappointing? Okay, so any, any feedback about this, Ramesh? Please, please, please do drop it to support at Outskill.com. That is what I would genuinely request, and we'll definitely take the feedback and get better.

[01:01:54] - [01:02:00]

Harshith Vaddiparthi | Outskill: Yeah. Okay. I want to know the difference between... okay, I think we're at 7 already, so...

[01:02:00] - [01:02:14]

Harshith Vaddiparthi | Outskill: Let me quickly, quickly take one question, and then, you know, we can wrap up. I want to know the difference between training your model using video and using pictures. I've seen many people who train their model using pictures of their clients, etc. Is it true? Yes.

[01:02:14] - [01:02:28]

Harshith Vaddiparthi | Outskill: It's possible to train models. Basically, what happens is, the training models is something called as a LORA, L-O-R-A. I forgot the full form of it. What it means is, you take about 20 pictures of

[01:02:28] - [01:02:43]

Harshith Vaddiparthi | Outskill: your client or your main character, you create a LoRa, it just means a folder of all these photos, you give it to the AI, and you retrain it based on the photos, and now the outputs that you get are gonna be of that videos.

[01:02:43] - [01:02:46]

Harshith Vaddiparthi | Outskill: So that's basically how it's done.

[01:02:47] - [01:02:48]

Harshith Vaddiparthi | Outskill: Okay.

[01:02:49] - [01:03:05]

Harshith Vaddiparthi | Outskill: All right, guys, yeah, these are all the questions that we've covered, and of course, we do have 36 more. Do not worry, we will also take the questions tomorrow as well. The questions right here, we'll continue them tomorrow. So I think, that was my time, and I hope I've added value to you guys.

[01:03:06] - [01:03:11]

Sumedha: Perfect. Thank you so much, Harshith, for digging this up. How was it, everyone?

[01:03:13] - [01:03:18]

Sumedha: I can see the heart's reaction coming in, and the compliments in the chat.

[01:03:18] - [01:03:43]

Sumedha: So, thank you so much, Harshith, for taking this up. Thank you, sir, everyone, for joining in. I hope everybody found this valuable. As you know the drill, so we will go ahead, take a quick 30 minutes break, and we will join again for the main session for at 7.30pm IST. So, we will see you again in 30 minutes. You will definitely get the recording of the session, do not worry about it.

[01:03:43] - [01:03:52]

Sumedha: And, with that, we will close the session, and we will rejoin using the same link in 30 minutes.

[01:03:53] - [01:03:54]

Sumedha: Thank you, everyone.
