

Day 11 Live Session

07:06 - 13:28

[Pre-session music played; lyrics not transcribed.]

13:40 - 13:51

Hello, everyone. A very, very warm welcome to day 11 of your program. How are you guys doing?

13:51 - 13:59

A quick check, am I audible, am I visible?

13:59 - 14:11

All good? Perfect. Good morning, good evening, good afternoon, whichever part of the world you guys are joining from. Yes, I am doing good, thank you so much. I hope you guys are doing well, too.

14:11 - 14:32

Name of the song, folks, as we said earlier, the playlist will be shared with all of you on day 14 of your program, which is in another 3 days. So yes, I'm not gonna look into the questions about the playlist for now.

14:32 - 14:38

Today is day 11 of our program, folks. How are you guys feeling so far?

14:38 - 14:58

How many of you have actually attended the bonus office hours that we had, and we will have the bonus office hours tomorrow and day after as well. Saturday is when we will have our last

bonus office hours. So if you are somebody who has not yet attended any one of our bonus office hours starting from Monday, I would highly recommend and suggest

14:58 - 15:08

Try to attend at least one day, and I'm sure you will not regret it.

15:08 - 15:14

Perfect. I see all that energy in the chat already.

15:14 - 15:37

With that said, we will quickly get started. So this is what we are going to do today. We will have a session on Claude ecosystem, the entire Claude ecosystem. There is so much that you can go and do using Claude not just prompting and getting an output right? So today we will do a deep dive on what are the possibilities out there using Claude and we'll also build a live product

15:37 - 15:46

Functioning product using cloth code inside clot, right? But we will not have a workbook for the session. Any guesses on why we will not have a workbook?

15:46 - 15:52

I think we did mention yesterday on why we will not have a workbook today.

15:52 - 15:53

Let me know in the chat.

15:53 - 15:55

Okay.

15:55 - 16:07

Great! I think all of you did pay attention yesterday, because I see the perfect answer in the chat. Yes, because of hackathon. And also, somebody else mentioned that

16:07 - 16:31

Claude code is only available on paid version of Claude. True. That is one reason why we will not have a hands-on in today's breakout room, but the major reason is because you are hackathon is officially getting started today. Once the teaching part is done, we will have Puthapa here, who's going to brief what hackathon is, and every minute detail that you need to know and be aware of about hackathon

16:31 - 16:49

And you will get to meet and interact with your teammates. Yesterday, you found out which group you belong to, and who are your teammates on a sheet or on a product. Today, in the breakout rooms, you will join the respective rooms, and you will interact with your teammates and start building your products.

16:49 - 16:56

Now, questions about if you're gonna brainstorm today and start building from tomorrow, that is left to you folks. I'm not going to say anything about it.

16:56 - 17:09

If there is somebody who has not yet found their, group or faced any issue with the product, drop your email ID in the chat, and we will take a look at it.

17:09 - 17:31

Yes, William, if you are somebody who couldn't find your group yesterday, please do drop your, email, and we are looking into it. Is hackathon mandatory? It's not mandatory, folks, but I would suggest you guys participate in it. If you do not have time to build, at least see on what the team is doing

17:31 - 17:32

Great.

17:32 - 17:45

All the emails that are coming in the chat team, we can have a quick look at it, and then see what we can do over there.

17:45 - 18:14

Perfect. With that said, we will quickly get started with our today's session. As I mentioned, we are going to do a deep dive on Claude, and we have a very amazing mentor already in the room with us, right? And you would have already met him in one of your breakout room yesterday or in the previous session. So we have Vishwas here, who's a YouTuber and also a content creator and an AI generalist himself, and he will be there with us today to walk us through the

18:14 - 18:29

complete ecosystem on Claude, and we will have a live functioning product by the end of today's session. Again, we know the drill. Any questions while the teaching is happening, put it on the Q&A box that is available out there, and the commenters will be able to

18:29 - 18:36

answer all the questions that are there on the Q&A box, and once that is done, we will get into our hackathon.

18:36 - 18:43

Are we excited, folks? On a scale of 1 to 10, how excited are we?

18:43 - 18:46

100

18:46 - 18:48

Okay, I see somebody dropping 2000.

18:48 - 18:58

Great. Perfect. With that, let's also give a very, very warm welcome to Vishwas. With that said, Vishwas, over to you, and I'll leave the session for you for the next couple of hours.

18:58 - 18:59

Thank you, sir.

18:59 - 19:09

Thank you so much, Shasti, for this introduction. And I'll get a quick audio video check from every one of you. Please let me know in the chat if I'm visible clearly and you can hear me clearly

19:09 - 19:27

Perfect, loud and clear. I'll start sharing my screen, and I'll first show you what we are going to build in the next few hours. I'll show you the final product of what you'll be able to do in the next few hours, and you will be in the top 1% Claude users

19:27 - 19:37

After the session ends. Okay, so I'll start sharing my screen, just give me a second.

19:37 - 19:42

Perfect! Can you see my screen?

19:42 - 20:04

Also, guys, I'll have my chat open just in case I am looking for some sort of responses. I'm looking for majorly a group agreeing or disagreeing to something in, like, we need to stop somewhere, we need to move ahead, or if any technical glitches are not a part of the process. If

you have any sort of query, please restrict that to the Q&A section. We have amazing co-mentors with us. They'll answer to all your queries

20:04 - 20:09

But so that I don't lose my flow, let's not dump questions in the chat.

20:09 - 20:26

Perfect. Now, getting started with this. We have a website which is named Richie Rich. In the last session, the chat demanded the website to be named Richie Rich. I'm using normal browser, and this is a link. The fun part is that even you can access this link

20:26 - 20:40

Without any specific Claude requirement. This is a website live on the internet. Don't open this right now. Don't open this. Just see if this is working or not, but don't try doing a lot of stuff on it, okay? Do not make a lot of efforts. This is basically a finance dashboard

20:40 - 20:57

For anyone who actually is bad at managing their finances, it has a proper dashboard with total assets, liabilities, investments, and gain losses with a proper breakdown. It has a portfolio section where you can search your stocks, where you can sort by value

20:57 - 21:11

And you can sort by value, you can sort by gain percentages. You have your liabilities. You have a proper calculator, like if I'm investing XYZ amount for XYZ months and my annual return is this, after 20 years, what will be my final corpus?

21:11 - 21:29

So it has a lot of fun tools. We have a fire number calculator with a lot of assumptions that you can customize as per your own requirements. We'll get to this. We have a proper journey of your investing starting from the age that you started putting money in till today. We have settings and we have a lot of other fun stuff. Now I'll close this.

21:29 - 21:39

It was just this for the time being, okay? We won't be looking at it right now. And now I'll be explaining you the difference between multiple type of Claude

21:39 - 21:41

available to you guys

21:41 - 21:54

We have different layers of using Claude. Okay, light mode, thank you so much for this feedback. I'll ensure that everything that I'm using is in light mode. We have different layers of using Claude, which is available to us

21:54 - 21:55

And

21:55 - 22:11

I'll give you a very fun example, right? You have four different friends, you and these four friends are a group of five people, and you guys jam along so well. You guys are best test of friends, and you individually, any one of you

22:11 - 22:28

Cannot really function without any of these frames. Okay, so you have proper, proper 4 frames. You have 4 frames, sorted, all right. Now, what happens, actually, is you need to understand which friend is capable of what

22:28 - 22:32

Quality. I'm repeating

22:32 - 22:48

Which friend is capable of what exact quality? You need to understand friend A might be the best person you need to consult when you're going to buy a car. But at the same time, that might be the worst person that you need to consult when there is something wrong in your personal relationships

22:48 - 23:03

But frenzy at the same time is the best person that you can seek any help from while you're in relationships. At the same time, friend C has no understanding about cars whatsoever. So every friend fulfills a different role in your life

23:03 - 23:18

Right? We understand that. And after understanding that only, we are moving ahead with the final chapter, with the final session, and trying each and every tool named Claude Chat, which all of you have been using till it, named Claude Design, Claude

23:18 - 23:34

code and Claude Cowork. This is going to be a very fun session. I'm super excited because we have so much to do that I am excited in advance, okay? But first of all, without actually jumping to the practicals of it, without actually

23:34 - 23:37

Spending your time building stuff

23:37 - 23:53

We need to understand a bit of theory. I promise I won't take more than 10 min in the theory part, but you need to promise me that you will be 100% attentive in the theory part as well, because people feel that theory is something that they can take lightly. But right now, theory is also very, very important

23:53 - 24:08

Okay, thank you so much. Now, starting with your first friend, whose name is Claude Chad. This is the one that you have been using daily. This is the one that you can equate to ChatGPT, Gemini, Grok, anyone. Like, a proper chatbot

24:08 - 24:24

Who you can talk to, and who can answer you. That's it. Imagine you live in India, and this friend lives all the way in US, like in the opposite corner of the world, and you'll never meet. So if... even if you have to pick a pen from your table

24:24 - 24:33

This friend cannot help you do it. Even if you are extremely ill, sick, this friend cannot help you

24:33 - 24:50

with anything. This friend is just a digital advisor. This friend lives far away. This is your long distance friend. This friend is extremely knowledgeable about everything. If we have 8 billion people on Earth, he's the smartest of them all. He knows every single thing.

24:50 - 25:04

Be it politics, be it science, be it anything else. But this friend cannot do anything for you. You can just talk to this friend. So basically, this friend knows everything three on three, but it does not do the work, and it does not ever

25:04 - 25:15

touch your stuff. Buy stuff. What do I mean? Like any file on your computer, any specific file on your drive. Claude chat is very restricted in that

25:15 - 25:25

In some situations, Claude Chat does that. We'll get to that. But right now, just understand that Claude chat is a friend. Claude chat is a friend that only

25:25 - 25:35

talks to you. And you can talk to Claude chat about anything, anything under the sun, but it won't help you do anything. Perfect. Moving ahead, we have Claude design

25:35 - 25:39

Which is

25:39 - 25:50

A younger friend, like, out of your group, he found his passion that, hey, I want to go into designing. I'm very good at designing. And just because he was very good at designing, and his family supported him.

25:50 - 26:08

he did not bother to learn about anything else. So if you want to learn about anything or do anything, you'll go to Claude chat. But out of that anything, if your requirement is only design, design about anything at all, design about PDFs, design about decks, design about websites, design of design about apps, design about videos

26:08 - 26:16

design about anything related to your business, letterheads, etc. Claude design will get the work done for you.

26:16 - 26:24

Did you notice the keyword? It will get the work done for you. You will not be the one doing it. Claude design will do the work for you.

26:24 - 26:42

Claude design knows only one thing, that is visuals, whereas our Claude chat knew everything. So Claude design is inferior in that terms, but at the same time, it does its own work. Claude design does its own work. That's the highlighted part

26:42 - 26:57

We have two type of lots. Chat knows everything, but it won't do anything for you, it lives far away. Claude design lives along with you, like, two streets away, or maybe one city away. It'll come as soon as you'll need. This friend will come as soon as you'll need, but it will do only one specific kind of thing, nothing else.

26:57 - 26:59

That's it.

26:59 - 27:16

Okay? And does it touch any of your stuff? No, it has its own canvas. This friend gets its own, his own painting board, and he paints on that, and he hands that painting over to you. That's it. It won't be managing or handling any of your files or your data

27:16 - 27:26

That is Claude design. He's the specialist in visual design. Then we have Claude Core. Claude Code is also the specialist inside coding

27:26 - 27:38

Claude knows code at the level that Claude design news design. These are two different people with two different skill sets, and they went extremely narrow and deep in their skill sets.

27:38 - 27:50

Extremely narrow and deep. What does these 2 words mean? If I have to define, let's go to some empty space. This is a wider... this is a wider space, okay?

27:50 - 27:59

If you actually learn all these elements, you have surface level knowledge of a lot of stuff. And this is

27:59 - 28:07

Wait a second. What just happened?

28:07 - 28:14

Just a second, guys. Yeah

28:14 - 28:31

So this is why Vid allows you to be jack of all trades. You are a person who knows everything. You are the most interesting person in the party. You can talk about anything and you have wide level knowledge of every specific possible topic available

28:31 - 28:47

But you only have a beast level knowledge of all of that. But one of your friends might not know all of this. They might only know, like, for example, this, this part of the conversation. But under this part only, they are

28:47 - 28:53

extremely deep. They know a lot more than you about this part only

28:53 - 29:08

So both of the people are respected in the party. Both of the people are fun in a party, and both of the people have their own specific importance. Similarly, Claude Chat is the one who has the widest level of knowledge

29:08 - 29:25

And Claude design is the one who has narrow level of knowledge inside designing capabilities. Claude Code is the one who has narrow level of knowledge inside coding capabilities, and it also touches the folder that you hand over

29:25 - 29:41

Claude code can also reach and access an offline folder in your computer, in your PC, Mac computer, anything you can hand over a folder and it can make changes, delete files, add files, make files. That's what it's capable of. And at the end we have Claude Cowork

29:41 - 29:50

This is your best friend. Out of the group of five, the other three don't know, but you and Claude cowork are the real bruise.

29:50 - 30:05

Claude Cowork is ready to do anything for you. Claude Cowork knows everything. Claude Cowork has the widest level of knowledge, exactly as the one friend sitting in us. You live in India, Claude Chat lives in us all the way

30:05 - 30:11

On the other side of the world, and he can just talk to you, give advices, never do a thing for you

30:11 - 30:26

But Claude Co work knows everything. He can talk to you. He can do the work from start to finish, and he can also access all your tools, files, apps, tools, everything. Claude Cowork is your personal assistant. Claude Cowork will do the job for you, okay?

30:26 - 30:42

That's the major difference between Claude Chat, Claude Design, Claude Code, and Claude Cova. Now I'll give you one basic analogy, and then we'll move ahead with using the actual case of the website that I just showed you in the beginning of the lesson, okay?

30:42 - 30:52

Imagine you want to get a very tasty pasta, like the tastiest pasta you have ever seen. I'm stopping the stage here, just look at my face. Imagine the story

30:52 - 30:55

You want to have the tastiest pasta you have ever imagined in your life.

30:55 - 31:00

And to make that pasta, you're not a chef, so you ask your best friend

31:00 - 31:17

But the best friend is a chef. Actually, he's a chef. But the best friend is on a call and he instructs you, okay, do this, do that, soak the pasta, boil the pasta, make the sauce, then mix them, and you are doing as per the instruction. You mess up somewhere, then you tell, hey, hey, hey, I messed up

31:17 - 31:22

I either added some wrong proportions. That is Claude Chatford.

31:22 - 31:27

Okay? Perfect. Now, if you actually hire a chef

31:27 - 31:43

Hire a chef to make the pasta for you, that chef will come. That chef will make the pasta for you with his own hands, using all his capabilities that you might not be aware of, because cooking is an art form, and the chef is an artist, which you are not

31:43 - 32:00

That is an example of Claude design or Claude code. Both of them are narrowed down and deep down in their own skill set, just like a chef will do the job for you. Here, as we can see, I won't share my screen again. Just listen to me.

32:00 - 32:07

Here, as we just heard, as we just saw, Claude design and Claude code

32:07 - 32:24

are top of their skills. They only have one skill, but they are extremely specialized in that skill. Like, nobody on this earth can code faster and better as a human than Claude Core. Of course, humans are the one making Claude. That's a different conversation. But right now, Claude Code is more fast and efficient than any human possible.

32:24 - 32:41

Claude design is faster and more efficient than any human possible to make a base draft of design. The final touch, of course, requires human element that I'm not disagree with, disagreeing with, but the point here is, the chef who comes to your kitchen and makes the pasta for you in your kitchen is either Claude Design or Claude

32:41 - 32:46

Who knows, only one specific state. All right? But the third case

32:46 - 32:49

you... get someone

32:49 - 33:05

Who is an expert chef. Who is an expert negotiator, who is an expert shopping person. That guy comes to your house. He's not just a chef. He's everything. He's expert in everything. He asks you, what do you want to have? You don't know what do you want to have? You say I

33:05 - 33:22

Want to have something comforting, something tasty, something that I feel very homely with, and so it says, okay, let me make a pasta. That guy is not just a chef. That guy is also your mother. That guy knows you deep down. That guy knows your preferences, that guy knows how

33:22 - 33:30

You behave to certain responses. You had a very bad day at office. That guy knows, okay, this guy will feel comforted by a pasta.

33:30 - 33:37

So that is your best friend as well. Now he goes to the kitchen, and he says there are no utensils

33:37 - 33:54

So since he's a great negotiator as well, he goes to the market, he finds the best utensils, he has the knowledge of which utensil is best, he finds the best materials, he negotiates for the price, and he gets the work done for you at the minimum possible price. I have not yet gotten to the capabilities of him being a chef

33:54 - 34:11

He's just a master person who knows everything and who does everything for you. He goes to the market, buys utensils. He gets back home, and then he sees, oh , there are no ingredients. How do I make pasta? Now, while being a good chef.

34:11 - 34:29

He's also a good problem solver. So instead of going back to the market again, he opens an app on your phone. He opens an app of 10-minute, 20 minute, 30-minute delivery, and he orders all the ingredients at the best prices possible for you, okay? And once these ingredients are at your home

34:29 - 34:43

This guy starts cooking the pasta, but meanwhile, meanwhile, when these ingredients were not there, this guy is also aware of your movie taste. This guy shows you the best movie, the most comfort movie that you would want to watch at that moment of time, which even you are not aware of.

34:43 - 34:52

Best friend, of course, then he goes on to cook the pasta, and he cooks the pasta as tasty as the master chef. Just slightly 10% lessen.

34:52 - 35:08

Slightly because he has widest knowledge, not the deepest knowledge, okay? Then he goes on to cook the pasta, or maybe, maybe, that guy is a problem solver. He can summon the chef, he can call the chef and get him over to do the job

35:08 - 35:19

And that is the word done for you via Claude Cowork. Now, I'll just quickly, in one sentence, revise this entire example with the text we have in front of us. Can you see my screen right?

35:19 - 35:22

Checking again

35:22 - 35:52

Yes, perfect. Claude chat is just your friend on a call. Hey, man, do this, cook this, boil this, mix this. Okay, I can do it. You are knowledgeable. Thank you so much, but I have to do it myself. No, I came back lazy from my office. I came back tired so I can summon the chef. I can ask Claude design in the chef format or Claude code in the chef format to cook the pasta for me. But if my utensils are not available and ingredients are not available, I want to watch a movie. They won't help me with. They just know how to cook the tastiest pasta and they have

35:53 - 35:54

enough pride in that. That's it

35:54 - 36:12

Claude Kovac, my best friend, okay? My best friend, and this guy just helps me go along. This guy just helps me understand what do I need to have. This guy gets the work done. This guy cooks the pasta. But if required, Claude can also delegate any task to Claude

36:12 - 36:30

Coat or cloth design. Claude co-work, if it feels, hey, that this task is more specialized for Claude code. So let me hand that over to Claude Code, and Claude Code will take that over. This task is specialized for Claude design, so let me hand that over to Claude design, and Claude Design will take that over

36:30 - 36:40

That's what Claude Koburg does. Your best friend knows everything about you, has all the context, and gets the work done while you rest.

36:40 - 36:57

Perfect. Now we have a basic differentiation clear of how these things perform, right? Give me a yes or no in the chat. If you have a basic idea clear, we'll of course be diving deeper into how to use all of them. What's the difference between web version and desktop version

36:57 - 37:04

But I hope we have a clear example, clear difference in our mind. Perfect. I love seeing a lot of yeses in the chat.

37:04 - 37:10

Now I'll actually go to my plot. Here is my clot.

37:10 - 37:15

And I want to build a website. I want to build the website that we just saw

37:15 - 37:22

For that, I need to go to Claude design. I need to go to Claude design.

37:22 - 37:31

This is my Claude design. I'll visit the standalone page. You just need to go to the top left corner and decide that I'll just quickly turn it to light mode.

37:31 - 37:34

Here it is. Perfect!

37:34 - 37:39

We are in a Claude design

37:39 - 37:56

As I told you, Claude design does everything design, but Claude Chat is a bit better at understanding what you're looking for. So I can just go ahead, I can write a prompt here that, hey, I'm looking for this and that, and this and this website. Okay, I'm going to this and this website, I want to build a design, help me with the design

37:56 - 37:58

That won't be perfect enough.

37:58 - 38:15

Now, I just go here and okay, if someone is asking where do I, how did I go to design? This is the base interface. This is the base interface. Don't worry, this is the base interface. I'm showing that again. Please focus. This is the base interface and we go to the sidebar

38:15 - 38:19

Here is our final sidebar, you have all your projects, you have all your chats, you have

38:19 - 38:27

artifact schedule design customize and edit side by side you can add anything here only you see a button for design

38:27 - 38:41

open design in a new tab. Here is my new tab. I'll close the sidebar. I can continue with the design right here only, or I can just go forward to the standalone home page. Right now, we are inside Claude's page only, where it's easier to access design

38:41 - 38:55

But if I go to the standalone home page, this is where I'll end up. Claude design. This is in beta version and you have proper pre-made templates here to get started with. If you want to build a resume or a 3D object and stuff like that.

38:55 - 39:01

All right, now here all the you'll see your past projects. Perfect.

39:01 - 39:13

I can just go forward and write a prompt, but I won't be doing that. And there's a reason for that. I can just go forward and write a prompt, but I won't be doing that because I know as a human, we have limitations

39:13 - 39:17

For explaining the way we want to.

39:17 - 39:27

No matter how well you are able to articulate a specific thing, you can be the best one for that. But an AI talking to an AI will do better.

39:27 - 39:45

At least that's what I believe, because these systems are meant to absorb the data and information in a certain way. And why not give them that in a certain way? So I'll simply go to Claude chat. I'll go to a new chat, I'll select chat here instead of co-work, I'll be selecting chat here instead of co-work.

39:45 - 39:59

Make sure you are on the chat here instead of co-work, because I just want this digital friend of mine to help me write a prompt. Okay, that's what we need to do. We want this friend to help write a prompt. That's all. Nothing else.

39:59 - 40:14

What do we need a prompt for? We need a prompt to build the website. We need a prompt to build the website. Okay, before we actually go forward to build the website, what do we guys want to name the website? We know that this is a specific finance dashboard. This is a specific finance

40:14 - 40:25

calculator, finance tracker. What do you guys want to name it? Give me the most creative names.

40:25 - 40:32

Uncle Scrooge money to me. Double down. Double Down is a good name. It's a catchy name. I love it.

40:32 - 40:37

Money guru, money bag

40:37 - 40:42

Billy billions finance guru

40:42 - 40:57

Investopedia. Investopedia sounds fun. Investopedia sounds like something that feels believable, but if we want to go more fun, more edgy, we can go with Money Heist. That's fun. What's up buffet is also very fun. I love how creative you guys are

40:57 - 41:00

Rainmaker, extremely, extremely fun.

41:00 - 41:07

Finwin, okay, my final pick. I'll go with Finn Wynn. I love the name FinWin.

41:07 - 41:22

So guys, that's done. We have our name. Thank you so much for your inputs. We are going with Finn Wynn. So I'll simply go to Claude chat, and I'll explain my idea in the most nascent form. I'll explain my idea in the most basic form, alright?

41:22 - 41:42

Now, since I want from this chat, I don't want a website. I just want a prompt, big enough prompt to copy and paste into Claude Design. So that's why I'll just be explaining the base core

idea. I'll just go here. I'm using Whisper flow for anyone of you who does not know whisper flow is, I think that all of you know from the last

41:42 - 41:56

so many days of session, because almost all of the mentors use Whisper flow. It's the most comfortable tool to write long prompts, but it's just speech to text AI tool which lives in my computer, and it types whatever I'm speaking. So I say

41:56 - 42:03

Hey, Claude, I want to make a website by the name of Finn Win, which is

42:03 - 42:17

A basic personal finance and investment dashboards. It tracks all my assets and liabilities. It is never connected to my real bank accounts. I am manually typing in all the entries, right?

42:17 - 42:25

This is the basic version that I want Claude to know. I'm making a tool and I am manually entering all my investment records.

42:25 - 42:42

Ask me five most important questions that you think would need to be answered before I move on to designing the website. And once I actually answer them, then move on to write a complete Claude design prompt for a responsive prototype covering a dashboard, holdings, liabilities

42:42 - 42:46

Fire calculators, backup settings

42:46 - 43:02

Use dummy data and make every calculation assumption visible in the interface. Okay, I'll just send this over, and I'll explain this to you. Why did I write this prompt? Because, as I just as I just said, humans are not the most ready versions to get

43:02 - 43:19

along get ahead with the project. Whenever you want to get a task done, you might not, like most probably 99% of the cases, you would not know what is the best way to go forward with it, and what are the most important factors that need to be answered. So I just let

43:19 - 43:32

My best friend over the call helped me with that, that hey bro, I'm doing this. What do you think I should keep in mind? What do you think I should decide beforehand, before I even move along with defining anything like this?

43:32 - 43:38

So, Claude will help me think. Claude will help me, choose

43:38 - 43:46

the answers that I need to be ready with. And the questions that we are going to see, they might be something that they are important, but we might not have

43:46 - 43:51

Consider them, right? We might not have considered them

43:51 - 44:03

Now I just said, ask me 5 most important questions that you think would need to be answered before I move on to designing the website. And once I answer them, then move to write a complete Claude design prompt for a responsive prototype, like a proper website.

44:03 - 44:15

Okay, then I need a dashboard, holdings, liabilities, file calculators, backup settings. This is a core finance terms. Dashboard is like a main interface showing everything. Assets is everything that you own. Liabilities is everything that

44:15 - 44:31

You need to pay back to the market. A fire calculator fire is a number that fire is a number that tells you that if you have this much of money today, you do not need to work for your life. This much money will work itself

44:31 - 44:42

maintain the standard of living that you are living today, okay? For example, this is basically if you have... you have annual expenses of, let's say, 10 lakh rupees, and you have 2 crore, or 2.5 crores in your bank

44:42 - 44:58

You can have that 10 lakh, 12 lakh rupees every year without touching that 22.5 crores. That's the magic of investing. We won't go deep dive there. This is a basic fire number, which is 20 to 25 times of your annual expenses. And backup settings basically have it ready

44:58 - 45:13

to let me download my data whenever I want to, okay? First is, yes, every entry is typed by hand, and it's not connected to the bank. Now, it has asked me 5 most important questions, and once I answer these 5 questions, it will be ready to

45:13 - 45:19

With the proper prompt to copy and paste into Claude Design and get the work done

45:19 - 45:36

Okay, don't worry, I'll get along with lakhs and millions, don't worry, I'll change that. Basically, 10 lakh India is 1 million. 1 million, it has 1 followed by six zeros, that's what I'm saying 10 lakh. So if you can survive, if your annual expense is 1 million

45:36 - 45:45

Whatever currency, if your annual expense is 1 million, if you can manage to get along like somewhat along 25 million in your bank account

45:45 - 45:53

You do not need to work for life. That's just basic finance maths working. Let's not go deep there. Let's work on our Claude project. Okay?

45:53 - 46:10

Alright, answering all your questions. Currency and number format. In the settings page, I want you to show the top 10 most used currencies of the world, so that people from across the world can choose their own currency, but let the default stay on USD. Okay

46:10 - 46:13

This is my answer to the first question.

46:13 - 46:15

Second question says

46:15 - 46:22

Which type of assets do you hold? I hold stocks, mutual funds, FDs, NPS, gold, real estate, crypto cash

46:22 - 46:39

Everything. Just give me a proper drop-down menus whenever I am filling my entries. I need to see drop-down menus so that I don't have to type in G-O-L-D or R-E-A-L-E-S-T-E-T-E every

single time. I can just click and choose whatever I want to choose, and then type in my final values

46:39 - 46:42

or the amount that I've invested

46:42 - 46:59

It's fair, guys, right? I would not want to actually type in what have I, bought every single time. Is it a real estate or gold or whatever it is? I just want to see a table from which I can click and say, okay, this is what I bought today, and this is what I would like to track

46:59 - 47:15

Storage and backup. How do I want to store my data? This is a very basic technical question. Like if I have data on the website and I want to download that data. So what format should it be in JSON or CSV?

47:15 - 47:29

If you have any preferences, you can go with any of them. I would like to keep both of them as an option because we are building it for the people. We are not building it for our own use case, right? I am building it for each one of you present in the class. So I'll give both the options

47:29 - 47:35

Anyone might wish to download it in a specific format, they can.

47:35 - 47:48

The data should stay in the browser only on the one device. The data should never go on the cloud, and the data should be downloadable in both the formats JSON and CSV.

47:48 - 48:04

Non, like, non-password protected file. We won't go into such depths. We can ask Claude to build the website in a way that if anyone tries to download a PDF or a CSV or a JSON that is password protected, but that would need a lot more complications

48:04 - 48:19

And that would need a lot more time to understand. So let's not go there, okay? That is question number three. Question number four says fire settings. Which calculators do you want? Regular fire, lean fire, fat fire, coast fire. This is extremely technical, so we would just

48:19 - 48:21

Leave it onto

48:21 - 48:30

I want a regular fire, and I would actually want the parameters of current age, target, retirement age, and monthly expenses.

48:30 - 48:43

That's it. Okay? That's it. I would want numbers that I can type in, hey, I am 25 years old right now, and I want to retire by 40, and my monthly expenses are XYZ. So get me my fire number. That's how the maths works.

48:43 - 48:48

And users and devices

48:48 - 49:06

Okay, before I tell Claude, let me tell you guys. My plan is to actually host it on the web and send the links to all my... all my fellow friends available in this class, okay? So I'll just let Claude know that exact, but I'll use two words which might confuse you, but don't worry, we'll go through them

49:06 - 49:07

When

49:07 - 49:09

will actually be publishing that site on the way

49:09 - 49:19

My plan is to actually make this website in Claude Design, build it in Claude Code, and push it through GitHub and Netlify root

49:19 - 49:28

I want to make it public with a proper Netlify link, so that anyone across the world can use it with the data remaining in their browser.

49:28 - 49:44

Basically, the Netlify and GitHub... don't get confused by that, I'll explain you in the most simple words possible when the time comes, like, after one and a half hour almost. But right now, just understand that I am letting Claude know that this is not something I would like to use only in my own device

49:44 - 50:00

This is something I would host on the web, and everyone will be using this. Everyone who has access to that link will be using this. Yes, Versal is okay too. You do not need to worry about that. The point is that whoever will be using this will not be sharing their data with me

50:00 - 50:16

The data will be there in their own browser. The data won't be with me. The data won't be on my server. The data will stay in their browser. So I'll just send this prompt, and after this I'll get an extremely detailed prompt which will help me

50:16 - 50:20

Build the proper design of the website

50:20 - 50:24

Okay, before we actually let it build the prompt, I can also go ahead

50:24 - 50:30

and see my specific design requirements. If I have any. I can see

50:30 - 50:40

Just tell me two colors. Two random colors

50:40 - 50:43

Magenta and cyan, okay

50:43 - 50:46

I want the overall website to be magenta-coded

50:46 - 51:03

And very premium luxury magenta coated with monochromatic theme and subtle accents of cyan, if you feel they go well in the contrast. And I want my overall website to be in the light mode, or maybe give me toggle for light and dark mode, both

51:03 - 51:18

I know, guys, gold is premium, and orange and purple is a tried and tested combo, but we are going with something wild. As I just told you, you try, not always, but you try and be the dumb friend in front of the smartest friend that is available on a phone call

51:18 - 51:34

And let it decide what needs to be done. Then apply whatever you want to do, because the final decision is in your hands. So right now, I've just challenged to see if it is able to pull off magenta premiumized

51:34 - 51:47

monochromatic with some shades of cyan as an accent color. If it works well, perfect. If it does not, we'll change. No worries. Okay, it's working. It'll keep on working for, like, 2-3 minutes

51:47 - 52:03

So we'll wait for... we'll wait for the time. Here it is. Not even two, three minutes. Perfect. Opus 5.5, guys, by the way, it just launched day before yesterday, if I'm not wrong, or maybe day before yesterday, day before

52:03 - 52:04

Three days ago

52:04 - 52:09

This is extremely fast. This is the fastest Opus I have seen, and this is so good

52:09 - 52:14

We have the entire prompt, it's writing, it's writing, it's writing

52:14 - 52:17

They just go copy and paste it inside Claude design

52:17 - 52:23

Are we aligned till here? I hope I'm not rushing too fast, I hope I'm not skipping a lot of steps. I hope

52:23 - 52:28

You are with me

52:28 - 52:34

Perfect, perfect, perfect. Done. Sorted.

52:34 - 52:41

Okay, one thing to flag, INR is not the top 10 currencies by trading volume, so it's not in the list. Since you're in India and okay, do you want INR added

52:41 - 52:49

As 11th option. Let... let... let us go without INR, no worries.

52:49 - 53:09

I'll just copy this entire thing. I'll go to Claude design and I'll paste it. I'll paste the prompt. Here it is. My pasted from 173 lines. Okay. I'll just add here. I'll just add here if you want to include. Just make sure when we go to the settings button along with the 10 currencies mentioned, we have an 11th currency option that is INR

53:09 - 53:25

There you go. If you have anything else left, you can just type it in. And don't mistake the fact that for every single thing, you need to go to Claude chat and get the work done. Claude designs chat system can also get the work done for you. But right now, the reason was

53:25 - 53:37

That even we did not know what we needed. So to get more clarity on what I need from my own website, I went to Claude Jack. Otherwise, you can get started with Claude Designs chatbot as well. It's very good

53:37 - 53:45

That's it. And I can just go and send this over with the model Opus 5.5, and

53:45 - 53:46

Yeah

53:46 - 53:47

Here you go.

53:47 - 54:01

It will take its own time. Let it take its own time. Otherwise, you people are asking, can you share the entire response question in the Claude chat? That created this prompt, for sure. I can. This was my first prompt

54:01 - 54:17

This was my first prompt, otherwise you guys will see that as well in your LMS. Don't worry about that. You'll get it what exact prompt should I use? But the point is not about the prompts, guys. The point is about the fact that how you are able to break down everything to the

54:17 - 54:25

Most basic reply which has no scope of hallucination. Just listen to me here. Hallucination is the real problem when it comes to AI

54:25 - 54:41

I'm not able to paste the second prompt since it's too long, so don't worry, after this class, I'll make a document with all the prompts that I've used, and you'll get all of them, even the Claude design prompt. If you want to see, dissect, and nitpick. But right now, let's just focus on the part that I'm teaching. Let's just focus

54:41 - 54:45

On me and my screen, not on the text.

54:45 - 54:46

The point here is that

54:46 - 54:50

AI hallucinates. AI does hallucinate

54:50 - 55:01

AI that does not hallucinate, or maybe it hallucinates the least is Gemini, GPT, Claude the most largest context windows LLMs. Perfect

55:01 - 55:18

If I want to make an image. So me doing vague talks, me deciding while I speak, while I write a prompt in an image generation tool will confuse the AI. Similarly, if I am typing here something and I'm deciding while I'm typing

55:18 - 55:28

This will confuse Claude design. Claude chat will also get confused, but Claude chat, GPT chat, Gemini chat, they are the ones which hallucinate the least.

55:28 - 55:41

Right? So my entire point is I do not want them to take any decisions for me. I am the human. I should hold the command of creativity, and I am the one deciding anything and everything possible.

55:41 - 55:53

I should define every single thing possible up to the most basic detail, so that there's no scope of hallucination whatsoever.

55:53 - 56:10

Hallucination exists when you do not answer a question properly, when you leave a scope of assumption, when you do answer something, but half-heartedly, so that Claude has to assume one of the options possible. All the prompts that I have written today, and all the prompts that I write in my everyday workflow

56:10 - 56:20

Trust me, guys, my day begins with Claude even before I brush my teeth. And my day ends with Claude. That's not the most healthy sleep schedule, but my day ends with Claude.

56:20 - 56:26

The point is that every single time that I'm writing anything at all

56:26 - 56:31

I just go with an assumption that this guy needs

56:31 - 56:41

to know what I have in my mind and heart, to the core of it. I should not let this guy assume anything. That is why I asked Claude Chad to give me 5 questions

56:41 - 57:00

I did that. Otherwise, I could have just went with this prompt into Claude Design and get it... get it to just make me something. But that would have led Claude to assume a lot of stuff, which I do not want at all. So, we're back here. It's taking time, let it take its own sweet time, because it will take some base time

57:00 - 57:23

We will start Claude co-work meanwhile, guys. How excited are we to see the magic? I'll show you something cool and fun. Wait a second.

57:23 - 57:27

Oh, by the way, this wallpaper photo is clicked by me

57:27 - 57:34

You can appreciate me. Coming back, I have this finder window

57:34 - 57:36

I have this

57:36 - 57:38

Finder window

57:38 - 58:08

Okay, this window is a complete miss. This is a complete miss and no less than a miss. I'll turn it to light mode. Just give me a second.

58:11 - 58:30

I don't know why it's not happening. Let's not waste time, let's move ahead with this. If you see, I have ton of different formats. We have CSV, plain text, PDF, Microsoft document, video, again, PDF, some folders, PDF, JPEGs, HEIF, which is another version of image

58:30 - 58:48

This is a complete mess. We have supply orders, WhatsApp documents. If I expand this, this is what we have. We have randomist images like this as well. We have some payment screenshots. We have some Excel files. We have some videos like this. So this folder is a mess, guys. Do you agree?

58:48 - 58:54

This folder is a miss. We actually need to sort this folder. How should we go about it?

58:54 - 59:04

I'll just open Claude I'll open Claude in my desktop in my desktop app. I won't be opening Claude on the web.

59:04 - 59:11

This is something that you'll be opening on the desktop app. So you'll go here, you'll click this

59:11 - 59:24

And after opening the side chat, you'll go to a new chat. Onto the chat section. This is where the chat section lives, and this is exactly the way we had on the web. This is exactly the way we had on the web.

59:24 - 59:26

Now

59:26 - 59:35

I'll make sure that I'm at co-work instead of chat. This is chat, simple chat. This is co-work, which allows Claude to work in my folder.

59:35 - 59:51

It's okay if your Claude looks a bit different, since the updates or the interfaces roll out in phases. So it's completely fine. It's completely fine. Right now, what I'll be doing is, it's very important guys, please have a look at it very, very carefully

59:51 - 59:59

I have this folder ready, and this is the location. If you see at the bottom, we have the location. I'll just drag this and drop this up here

59:59 - [01:00:15]

So this is allow Claude to change files in KC accounts nump. Yes, allow Claude to change files. If you see here, we have a folder by the name of KC accounts dump and Claude for this specific chat can access all the files in KC accounts stuff

[01:00:15] - [01:00:20]

I'll show you once again, I just

[01:00:20] - [01:00:23]

I'll open a new chat

[01:00:23] - [01:00:25]

Great.

[01:00:25] - [01:00:28]

How do I get rid of this?

[01:00:28] - [01:00:43]

Yes, this is over. I can connect any project or any folder and I'll just go and connect the folder of KC accounts. You can drag and drop or you can also select with the finder which appears there. That's it. We have our folder attached. Now we are allowing Claude

[01:00:43] - [01:00:49]

to actually sort this folder or make changes in this folder, or read anything in this folder right?

[01:00:49] - [01:01:03]

As a normal human who has a personal assistant to get the work done for you, I'll type in the most basic format, most basic way possible. I won't complicate it any way which you can think of. I'll just say

[01:01:03] - [01:01:09]

Hey, Claude. The folder that I've attached is extremely, extremely messy.

[01:01:09] - [01:01:26]

It is not working at all for me. It has multiple format of files. It has randomness. It has actual invoices which I need to worry about. It has supply orders which I need to worry about. It has some subfolders which have not at all managed properly. So please do one thing for me.

[01:01:26] - [01:01:31]

go through all the files, understand what kind of content do they carry

[01:01:31] - [01:01:46]

bifurcate them into different subfolders, rename the subfolders according to the content that they have, and get me a cleaned-up folder with proper renamed versions

[01:01:46] - [01:01:54]

Was it simple? I think it was. I think I just clearly specified what am I looking for.

[01:01:54] - [01:02:09]

I just explained that, hey, my folder is messy. Please sort that up for me. I cannot do it up. Just look at the folder, look at the data, look at the files, look at the information inside the files, and mix up folders and rename the files. One thing that I'll add in the end

[01:02:09] - [01:02:16]

Specifically talking about the invoices when you are renaming invoices, go by the date

[01:02:16] - [01:02:20]

And the client name

[01:02:20] - [01:02:24]

go by the date and the client name. Like, basically, date

[01:02:24] - [01:02:30]

DD, YY

[01:02:30] - [01:02:32]

Underscore

[01:02:32] - [01:02:48]

clientele. This is the kind of renaming convention that I want my invoices to have, alright? So I'll just... I'll just go ahead and send this over. Just make sure you have your folder selected, otherwise it won't understand anything at all. Also, one very important addition

[01:02:48] - [01:03:02]

Make sure that you do not delete any files. It would not, even though I did not add this line, it would not... but just for safety purposes, it's always best to add this line. Also, another thing you see here, something called auto. What does it mean?

[01:03:02] - [01:03:17]

We have 3 level of approvals. One is manually approve. So at every single step, Claude will pause, so that you can approve each action. Can I read your files? Can I read the content of your files? Can I read the name of your files? Can I read the subfolders

[01:03:17] - [01:03:27]

Can I duplicate? Can I rename? Can I dissect them? Anything and everything. It'll ask you a ton of permissions

[01:03:27] - [01:03:48]

Automatically approved, says Claude runs on its own and pauses to ask if anything looks unsafe. If anything fails, it might be detrimental to the entire process, or it might cause any problem, then only it will pause to ask. So this is the go-to level that you should have working on anything Claude work. And the last one is skip all approvals, skip all approvals is dangerous

[01:03:48] - [01:04:05]

Skip all approvals is only and only suitable when you are okay with losing a bit of your data, when you're working on a specific device which does not have anything confidential, personal, or that you just cannot afford to mess with. Skip all approvals is something that people use when they have six, seven hour long tasks

[01:04:05] - [01:04:14]

with, like, hundreds of dollars of Claude limits burning on a loop and working in an extremely heavy, competitive, efficient environment, which

[01:04:14] - [01:04:33]

is a bit risky, and they take necessary precautions, so I would not recommend any of you to skip all approvals ever, just go with automatically approve, and it can get the work done. Output is what exact... if you need a proper document, if you need a presentation, if you need a design, you can go ahead with that. But right now, we just want to mess up with an actual folder, so we won't touch output.

[01:04:33] - [01:04:35]

I'll just send it over

[01:04:35] - [01:04:50]

And it's... my MacBook is now asking, do I want... do I want Claude to access it? So I'll say allow for anyone asking questions about Windows. Yes, you can do the same workflow. You can drag and drop in the same way the exact

[01:04:50] - [01:05:09]

folder to your Claude Google. Now, if you see here, we have something called progress. We have something called outputs, and we have something called context. In the context, we have only one folder that we need, okay? I can add any other folder if I need to, and in the outputs, we'll see the final version, the progress. It'll automatically just dissect it

[01:05:09] - [01:05:24]

into levels of... it'll automatically dissect it into levels of steps that it needs to do for data task to go. Now, it's running a command on my computer. My computer is actually running all this code. Claude has taken advantage. As I just told you

[01:05:24] - [01:05:38]

Claude knows a bit of the code. Claude co-work knows how to code. Your friend also knows how to cook pasta. But if needed, your friend will summon the actual chef, if needed, in some extreme cases, in some advanced use cases, Claude Cowork will delegate

[01:05:38] - [01:05:41]

or use Claude Code's capabilities to get the work done.

[01:05:41] - [01:05:56]

Right now, it's doing the work. It has taken 1 min, 10 seconds, and it'll take, like, 2 more minutes. In my interface. I don't find auto approve section. Just go and look onto your settings, or maybe, just try updating the app that you have.

[01:05:56] - [01:06:11]

Would you recommend to use the prompt to clean up folders on my Mac? Of course, that is the exact use case that we are working on. It's reading all the videos. Look at the screenshots here, guys. Look at this. It's actually looking forward for all the files that we had in our folder.

[01:06:11] - [01:06:29]

Going back to Claude design, do we have anything? We have something. It's building something. FinWIN, something magenta is coming up. It will take time. But yeah, we have something for sure. Let it take its own sweet time and we be on to Claude cover

[01:06:29] - [01:06:34]

By the time this is doing the work, just send any specific questions about the workflow

[01:06:34] - [01:06:45]

restrict the major theoretical or ideation questions to Q&A section, but send me something in Claude chat, or sorry, Zoom chat, if you think needs to be answered regarding this workflow.

[01:06:45] - [01:06:58]

Can it organize my Gmail inbox? It can, with something called connectors. If you go to this plus button, you have a connector, and you have all these connectors. You can add connector, manage connector, and you can give access to your calendar, gamma, Drive

[01:06:58] - [01:07:02]

Anything, and I have my Gmail as well here.

[01:07:02] - [01:07:12]

I don't have my Gmail turned on right now, but you can actually turn on your Gmail. It will need permissions, of course.

[01:07:12] - [01:07:27]

Can you show permissions properly? See, the permissions properly is something that you might be talking about Claude code. I'll get to that, just give me a second. If you see the progress here, read and classify all 78 files, it has done that. Build clean folders with renamed copies. If I take you here

[01:07:27] - [01:07:32]

There's nothing changed, right? This is the exact same folder which we were working on

[01:07:32] - [01:07:36]

I'll let the screen share stay here only.

[01:07:36] - [01:07:39]

You'll see things changing right in front of your eyes

[01:07:39] - [01:07:46]

You'll see things changing right in front of your eyes

[01:07:46] - [01:07:53]

I won't... I won't touch it. I'll just do something like this

[01:07:53] - [01:07:54]

We have

[01:07:54] - [01:07:55]

This

[01:07:55] - [01:08:07]

Along with the Claude co-work, so that you can see both of them, and the progress also shows that, oh, almost everything is done.

[01:08:07] - [01:08:18]

Okay, wait a second. Where is it done?

[01:08:18] - [01:08:30]

It did not even mess with my original folder. That's how considerate it's of your own files. It did not just go and miss so that if at all you wanted to look for some other file, you cannot

[01:08:30] - [01:08:42]

We have another folder called Kettle and Crumb accounts. Here it is. Inside that only. Kettle and Crumb account screen. I'll open this folder, and I see everything sorted. Look at this, guys. I'll just zoom it in.

[01:08:42] - [01:08:46]

And we have this. We have an index

[01:08:46] - [01:09:02]

of what exactly went where the folder new name, original file and notes. If we want to ever look at what exactly happened in that Claude to work session, we can refer to this. We have a readme first, so that if someone new just enters your organization

[01:09:02] - [01:09:19]

You can actually go on and see this. We have invoices, all the invoices, rent and utilities, services and repairs, software, subscriptions, supplier invoices, and all of them are renamed by the date and the client name. Perfect. We have all these invoices. We'll go back

[01:09:19] - [01:09:34]

We have credit notes, courts, and performers. We have supply orders, everything is sorted in a way that you would expect it to be sorted with proper renaming, with proper subfolder segregation. Was it crazy enough?

[01:09:34] - [01:09:40]

Was it cool enough? Because all this happened and like barely 5 minutes.

[01:09:40] - [01:09:44]

actual commands ran on your computer, actual

[01:09:44] - [01:09:54]

data was fetched, understood, renamed, segregated, and then re-bifurcated into subfolders.

[01:09:54] - [01:10:12]

Cool enough, crazy enough. I always love doing such things with Claude Kovalk. Okay, how many files were there in the folder? This folder actually has 48 files with a lot of other folders as well. Like, for example, if I go to downloads

[01:10:12] - [01:10:28]

It has, like, 8 more items. If I go to scans, it has 5 more items. So, a total of, like, a total of 60, 65 files. And it is done on Claude Core. As I just told you, in the very beginning example

[01:10:28] - [01:10:40]

Claude Kowork is your best friend. It'll do the work for you. It won't just tell you how to do the work. It will do the work for you. And that's Claude work for you guys.

[01:10:40] - [01:11:04]

Perfect. Now, unable to copy the command, can you put the command in Q&A? See, again, that's the point that I'm telling you. One, I'll send all these commands, all these prompts in a document after the session is over. Don't worry, you'll find that in your LMS. But more than that, the point is not this exact prompt. You do not need to go forward with this exact prompt. You need to learn the skill of letting your heart out. You need to learn the skill of

[01:11:04] - [01:11:17]

talking like you talk to a friend. You need to define the task that you need to do, you need to articulate your thoughts and write them down in any language you're comfortable in. That's it.

[01:11:17] - [01:11:33]

Okay, now, how can we do it with Google Drive, guys? Again, a very, very simple use case of Google Drive is this. You just go to the plus button, you just go to connectors. You just go to add connector and you go to browse connectors. Connector actually lets Claude

[01:11:33] - [01:11:57]

With anything that you have, like Canva, Calendar, Drive, Gmail, I have my drive connected, okay? So similarly, just like I ran and dropped a folder from my offline web, I can just go copy the link of a Google Drive and paste the Google Drive link here. And once I paste the Google Drive link here, I can type in the same prompt that, hey, all the files inside this Google drive are messed up

[01:11:57] - [01:12:00]

And please sort them out for me. It'll do the same thing for me.

[01:12:00] - [01:12:16]

Can it organize the pictures by facial recognition? I doubt. Maybe it can, because the models have been updated. But the last time I tried it was at Opus 4.8, and at Opus 4.8, or maybe 7. I don't remember. It was not able to do. It was almost 6 months ago

[01:12:16] - [01:12:23]

But it's an interesting use case. You can try that. Can you please repeat the first step? For sure, for sure. Don't worry.

[01:12:23] - [01:12:28]

You just open Claude I'll open from the beginning, okay? You just go and open

[01:12:28] - [01:12:30]

Claude

[01:12:30] - [01:12:34]

You just open Claude. This is how it looks. You go to a new chat

[01:12:34] - [01:12:36]

You go to a new chat

[01:12:36] - [01:12:44]

This is how your new chat looks, okay? You make sure you're not on the chat toggle and you are on the cookbook toggle.

[01:12:44] - [01:12:46]

Okay?

[01:12:46] - [01:13:02]

Then, you just drag and drop a folder which you want to work in. Right now, this is KC accounts now. If I just delete this KC accounts dump, I can just go, I can add any folder that I want to, it'll open my Finder, I can locate that folder wherever that is, and

[01:13:02] - [01:13:06]

There it is. I am giving access to Claude

[01:13:06] - [01:13:11]

To access my folder. That's it. That's how clean, easy, and simple this is

[01:13:11] - [01:13:29]

Talking of this, someone again flagged it. What does these settings mean? Manually approve will actually stop you manually approve will actually stop you at every 30 seconds to say, Hey, can I do this? Hey, can I do that? Hey, can I run that command? Hey

[01:13:29] - [01:13:39]

Can I just send this over? Hey, can I see this file? Hey, can I make some folders? Every single thing. And that's annoying. And that's not really the purpose of you delegating a task, right?

[01:13:39] - [01:13:48]

But automatically approved does not mean that it will automatically approve everything. Automatically approve will just say that

[01:13:48] - [01:14:04]

This feels easy enough. This does not need the main mentors or the main owner's permission to get the work done. So, let's go with this. Claude will automatically decide what's risky enough for you to approve, and what's basic enough for Claude to approve.

[01:14:04] - [01:14:10]

That's it. We'll come to skills as well, Sumi, just hold for a sec, hold for, like, 30 minutes. We'll come to skills as well

[01:14:10] - [01:14:23]

All right, that's it. And skip all approvals is where it gets dangerous and risky. Skip all approvals simply means that never ask me for my permission. Do whatever you want to.

[01:14:23] - [01:14:39]

get the work done. This might go out of hands if it hallucinates, if it misunderstands your prompt, if it assumes a specific step of your prompt. So I would not recommend you using this for at least 6 more months

[01:14:39] - [01:14:47]

And after 6 months of experience inside Claude and the potential risks associated. you can just go ahead with this. All right.

[01:14:47] - [01:15:05]

That's how you go about it. This was Claude Co-work. We'll get back to Claude Kowork, but let's have a look at what Claude Design had made us. Okay, we have it. It made everything, it made everything. I'll just go, and what I'll do is I'll actually present it. Okay, this is the interface for Claude Design. Let's just get handy with this first.

[01:15:05] - [01:15:26]

This is the interface for Claude design. You have a chat bot on the left side. You can chat about anything. You can add any reference. You can add any skill design files if your company has some design files, Figma files, you can add them here. You can connect it to Github, which is a proper code base. You can connect it there. You can reference another Claude design project only. You could do anything

[01:15:26] - [01:15:33]

And this is the model selection, and this is the send button. The proper chatbot, and this is the main design that we are working on.

[01:15:33] - [01:15:48]

Since this right now feels a bit restricted, I'll just go to present and I'll present in a new tab so that we can see it properly. How would a website look on a full scale? Okay, guys, this is how my website looks. So we have day and date, we have dark mode

[01:15:48] - [01:16:03]

light mode toggle. We can go ahead with this, okay? Perfect. Whichever one you like, whichever one the consumer likes, I have that. You are giving demo data, explore freely, then clear it to start with your own entries. Okay, let's see the demo data. Okay. I am

[01:16:03] - [01:16:08]

I'm owner of 1,83,000 USD. Wow.

[01:16:08] - [01:16:09]

Wow.

[01:16:09] - [01:16:18]

And my portfolio has grown 3,500 USD, which is just 2% of my portfolio in the last one month.

[01:16:18] - [01:16:36]

Fair enough, 2% growth per month gets to 24% per annum, which is crazy, which is investing God. But all the months are not the same. I would not divert into finance coach, but let's say we have total assets of 3, 39,000 USD. We have total liabilities of 1,55

[01:16:36] - [01:16:51]

Our debt-to-asset ratio is 45%, which means, which simply means you owe 0.46 for every \$1 of your assets. Fire progress is 11.8%. My fire number comes to around 1 million

[01:16:51] - [01:17:00]

In today's money, and I have only achieved, like, 11% of that, okay? It is 1 million, right? Yes, it is 1 million.

[01:17:00] - [01:17:15]

This is a breakdown of my assets, asset allocation, real estate, mutual fund stocks, retirement accounts, cash, FD, crypto, gold, everything. I can view it as a table as well. This is how it looks as a table, and this is how it looks as a pie chart.

[01:17:15] - [01:17:20]

This is my net worth in the last 12 months. If I see here

[01:17:20] - [01:17:25]

This has went from... okay, I don't see numbers here. This gives me a use case like

[01:17:25] - [01:17:38]

I want to see the numbers. For anyone ask, okay, Lean is asking, where did Claude get these numbers from? Claude assumed random number that just says you have in demo data. I can just clear demo data. I'll show you how to do that. I'll clear the demo data and

[01:17:38] - [01:17:50]

It will get everything back to 0, and then I'll fill my own entries. So one change that I want is I want to see the numbers here. When I hover my cursor over it. I can view it as a table like this, and I can also see which month was negative.

[01:17:50] - [01:17:57]

which month was negative April 2026 was negative, and December 2025 was negative.

[01:17:57] - [01:17:59]

I can view it as a chart, and

[01:17:59] - [01:18:10]

And liabilities, I have the biggest liability, which is home loan, then I have car loan, then I have credit card, and top 5 holdings are, like, my real estate, my stock market

[01:18:10] - [01:18:18]

Fidelity 500, and this is how it is. This is the dashboard which shows the summary of my entire

[01:18:18] - [01:18:21]

investment

[01:18:21] - [01:18:36]

No, you cannot connect it to your bank account, because we did not have that feature. To get it actually connected to your bank accounts, which is an extremely risky financial move, you need to get person who understands the coding safety layers. You should not. I'm saying you should not

[01:18:36] - [01:18:52]

blindly trust AI and getting your bank accesses, right? That is something that you should be aware of. Holdings. If I go to holdings, I have all these holdings, invested amount, current value, gain or loss, and return. What I can do is, I can just add any holding

[01:18:52] - [01:19:01]

And this will give me a proper table. Okay, what is the category? This is the dropdown that I was talking about. This is the category. Let's say I have invested in crypto today.

[01:19:01] - [01:19:06]

What type of crypto? For example, stablecoin. The name

[01:19:06] - [01:19:14]

I don't know names of the crypto, so I'll just write stablecoin only.

[01:19:14] - [01:19:16]

Quantity, I bought 10. And

[01:19:16] - [01:19:22]

And purchase date was today invested amount was

[01:19:22] - [01:19:37]

190 USD, and current value is 192 USD. I bought it today only, and it just went a bit up, okay? So that's fine, that's fine. Notes, if I want to any... add any account towards fire. This is a very interesting factor.

[01:19:37] - [01:19:55]

Again, I'll go a bit into finance just to tell you how Claude understands everything. Just quickly get to my screen, my face, and understand the concept. FIR number wants liquid cash, not necessarily liquid, but something that can work

[01:19:55] - [01:20:10]

on its own money. So, if I have going by the base example, 1 million are my month annual expenses, and if I have 25 million in my bank account, I can let those 25 million work as an investment, and from the returns of the 25 million

[01:20:10] - [01:20:15]

1 million return per annum is, like, what? 4% return, right?

[01:20:15] - [01:20:28]

Yes, 4% return. That's... no, it's not 4%. It is 4%. It's just 4% return. That's very, very achievable. You can achieve 7-8% very pessimistically.

[01:20:28] - [01:20:45]

So that is fine. Your 25 million are left as it is, and you are earning 1 million per annum to actually sustain your lifestyle. Whenever I'm making any investment, it asks me if I want to count it towards fire. My Bitcoin will count it towards fire

[01:20:45] - [01:20:48]

But if I am owning a piece of land

[01:20:48] - [01:20:49]

Should I

[01:20:49] - [01:21:07]

Right now, no, because that's just an empty land. It's not giving me any returns. It's not giving me... so I'll untick this, that do not count it towards the fire. When I'll build an apartment on that land, and I'll rent it out, that rental income will count in my annual revenue.

[01:21:07] - [01:21:23]

annual returns. And at that point of time, I'll just take count towards fire. So, by this entire finance, basics, finance maths, I just wanted you to know that Claude is a master in everything, not just design, not just holding, but in finance as well. And that is why Claude automatically

[01:21:23] - [01:21:29]

Included this button, including this checkmark, which I did not even ask for to ensure that

[01:21:29] - [01:21:37]

I can bifurcate which asset or which investment will go towards my fire, and which will not.

[01:21:37] - [01:21:50]

Crazy enough, I just save this and now we have another entry. If I just sort by. Okay, we also have sort by right now it's sorted by current value. I can sort by gain or loss. I can sort by returns.

[01:21:50] - [01:21:54]

I want to sort by date invested

[01:21:54] - [01:22:04]

We don't see a button. We don't see a button to sort by date invested, but here is an entry. Crypto stablecoin, 10 pieces, 10 units

[01:22:04] - [01:22:14]

190 USD, 192, plus 2% rise, plus 1% on September 26th. Oh, here it is. Last updated. Here is our top entry of last updated.

[01:22:14] - [01:22:29]

And I can edit this, I can delete this, I can do anything. If I go to liabilities, I have something similar. This also has a tracker of how much we have paid that off. Okay? And if I go to fire calculator, look at this. I have my current age, I have

[01:22:29] - [01:22:45]

My target retirement age, I have my monthly expenses today and we have some assumptions which we can change. Safe withdrawal rate is 4%, inflation rate. You also have to account inflation rate. Right now, if you're able to make it in 1 million, any currency per annum

[01:22:45] - [01:22:58]

Every year, a little bit of inflation will eat you up, you have to include that as well. And what is something that you are expecting as you will get returns from every year? 7%, 8% is

[01:22:58] - [01:23:06]

Like, the most safest instruments tend to give you 7 to 8%. And if you're able to get 12 to 13%, you can go long.

[01:23:06] - [01:23:09]

like, you are trading master, you are investment master

[01:23:09] - [01:23:25]

This is a proper... this is a proper, again, detail of how these numbers lead to your fire number, and monthly investment needed today is this much amount to actually reach your FHIR number by the time you're 50.

[01:23:25] - [01:23:37]

portfolio, projected portfolio by age. This is something that you have and settings and backup.

You can download JSON, you can download CSV and theme change currency change, anything

[01:23:37] - [01:23:50]

Well, I think this is an overview of the site FinWin. I'll just clear the demo data, and it is empty. No holdings, no liability, no nothing in fire, nothing in settings. I can just go add in my first entry, I can do anything.

[01:23:50] - [01:23:55]

This is my website, ready by Claude Chat and Claude Design.

[01:23:55] - [01:24:08]

That's it. We were just reviewing design. Shameen, we were just reviewing the design that was made by Claude design. And now I'll show you how do you actually go forward to make edits to this design.

[01:24:08] - [01:24:11]

This is not published yet. None of you can access this

[01:24:11] - [01:24:14]

Until and unless I publish this

[01:24:14] - [01:24:16]

You cannot access this.

[01:24:16] - [01:24:28]

So what I'll do is I'll make some changes. There are multiple ways to make changes. One of them is just write in anything that you require, and it will go forward to make the change. For example, right now, I'll say

[01:24:28] - [01:24:46]

You've missed the cyan blue accent. I get it if that is not looking extremely premium and professional at a lot of places, but I need to see a hint of cyan blue at a lot of places. Go ahead, figure it out, and add it. You can also add cyan blue accents, gradients, glows

[01:24:46] - [01:24:53]

Greens, light leaks in the background to make it have a tint of cyan blue, I need it.

[01:24:53] - [01:25:08]

You can type in any change that you want, and send it over, and this prompt will get updated right here in the design. That is option number one. Option number two is that you can comment on anything, and that will be sorted. For example, if I go here

[01:25:08] - [01:25:13]

This was the table of net worth in last 12 months. I'll pick up this comment

[01:25:13] - [01:25:25]

And if you see, wherever I'm dragging, wherever I'm dragging, it's highlighting the proper cell. This one, this one, this one. Okay, and I can also draw. I can draw on the screen.

[01:25:25] - [01:25:32]

So what I'll do is, I'll just go here, and I can draw on this table

[01:25:32] - [01:25:36]

And I have a little button here, add a note to your drawing. I'll just say

[01:25:36] - [01:25:41]

I want this graph to be interactive

[01:25:41] - [01:25:46]

A bit... bit of 3D, so that whenever I hover my cursor over any of the points

[01:25:46] - [01:26:01]

It should show me the value in that exact month where my portfolio was in that exact month and all the ups and downs. And whenever I am hovering over a specific dot, a specific pointer

[01:26:01] - [01:26:11]

That should highlight a bit above all the other 11 DOMs. That should stand out. That should stand apart with the month name and the amount at that, in that month.

[01:26:11] - [01:26:18]

Okay, so this is how you comment on that specific area. And when I sent this over

[01:26:18] - [01:26:31]

It comes here, right in the chat with a proper marking and the main feedback. It comes here, alright? Someone asked, how do you comment? I'll just show you once again, don't worry.

[01:26:31] - [01:26:48]

Normally you are with this button, which is interact. You are interacting on the entire website, scrolling, clicking buttons, watching everything, typing in entries, anything that you want, okay? Now, when you get back, you choose comment, you can draw anything

[01:26:48] - [01:27:03]

You can draw and highlight a specific area, and whenever you do that, you'll automatically see a pop-up of a chat box where you can write in anything. I can write in anything here. I can send that over, and that will automatically come to my chat box just like this. It is working on this.

[01:27:03] - [01:27:11]

Perfect. Alright, and my new version is ready, which updates the cyan thing. I'll show you how that looks. We'll refresh

[01:27:11] - [01:27:18]

And this is how my website looks. A bit of cyan here, a bit of cyan here, a bit of cyan here as well

[01:27:18] - [01:27:26]

It looks cool, not very premium design, I get that. Not very premium design, but it looks cool.

[01:27:26] - [01:27:33]

The graph of what's rising has blue. It looks cool as well.

[01:27:33] - [01:27:36]

But yeah, let it... let it be.

[01:27:36] - [01:27:40]

We have the logo as well, which has a bit of sign

[01:27:40] - [01:27:48]

I don't like the design, honestly, but again, I... we are not here to learn design, we are not here to learn finance. We are just here to learn Claude

[01:27:48] - [01:27:50]

And...

[01:27:50] - [01:27:59]

We need to understand how we can interact with stuff, how we can interact with a lot of elements, and how we can get the changes done as per our requirement.

[01:27:59] - [01:28:04]

It's working on this highlighting things, and I guess it's done again

[01:28:04] - [01:28:14]

Here it is. Look at this. This is my normal graph. This is how the graph looks when I actually hover my cursor, it shows a dotted line and a number.

[01:28:14] - [01:28:20]

Look at this, guys, look at this. This is the same dot rising up

[01:28:20] - [01:28:30]

Isn't it crazy? It also shows the value that I was in May, and it also shows you how much increase was it from April.

[01:28:30] - [01:28:39]

It's so crazy, man. It's so crazy. I love it. I love it. So that's how minute changes you can go ahead with

[01:28:39] - [01:28:52]

That's how minute changes you can go ahead with in anything. You can go to any page, comment on anything, and get the work done. You can comment on anything in general right here in the chat. Okay.

[01:28:52] - [01:28:54]

Just wait a second.

[01:28:54] - [01:29:04]

How did you go back from code to design in changes? I never went to court. I never went to court.

[01:29:04] - [01:29:21]

This is Claude design. This is opened on the web and back here I was in co work, which was another software in my desktop. Not offline, but installed in my desktop. This is a browser named Microsoft Edge and this is just a website

[01:29:21] - [01:29:33]

Okay, so I made this. Now, as I was just telling you, this button is interact. I can interact with anything. This button is comment. You can highlight anything and comment. For example, I'll just highlight this, and I'll say.

[01:29:33] - [01:29:39]

This dashboard needs a rectangle with rounded corners in the background.

[01:29:39] - [01:29:46]

That's it. Anything that you that comes to your mind, you can highlight that, send that over, and it'll get it done.

[01:29:46] - [01:30:01]

Edit button is comparatively more simple. If you actually want to change any value, if you actually want to change the copy, what does it mean by copy? It simply, you are viewing demo data explore freely than clear it to start with your own entries.

[01:30:01] - [01:30:16]

For example, I want to change this sentence in simple plain English. Why should I wait for a prompt to run and get the work done? I just select this edit just lets me edit anything manually, then clear it to start with your entries. I can just remove

[01:30:16] - [01:30:23]

own. I can select this and

[01:30:23] - [01:30:40]

Make sure it's bold. That's it. Edit is literal edit the way we have been doing since childhood in MS world and MS Paint, etc. So you can just go ahead. See the rectangle is here. This is the magic of a comment

[01:30:40] - [01:31:01]

Comment is still a prompt, but specified to a certain area, but edit is not a prompt. Edit is you taking charge of it and editing anything manually, or making changes. And now, once you go

back to this, this interact button, it says that, do you want to save your changes? Yes, save your changes and your changes are saved, and this is bold now.

[01:31:01] - [01:31:17]

What else can we do? For example, for example, how these numbers are calculated, how these numbers are calculated my dashboard actually says there are five actual formulas used to calculate these numbers. I'll go to edit

[01:31:17] - [01:31:24]

how these numbers are calculated. But I feel if we have

[01:31:24] - [01:31:38]

Why am I unable to select it?

[01:31:38] - [01:31:40]

Wait a second.

[01:31:40] - [01:32:01]

We found a bug. We'll solve that bug.

[01:32:01] - [01:32:17]

Okay. Okay, okay, okay. Just to give you a bit of context, I am not, very great coder. Great... I am not even a coder. I just know how to get the work done. I'm a good problem solver, decision maker. So this actual heading has

[01:32:17] - [01:32:33]

are code in build. This is not just a text typed. If I can... if I want to select this, I can. If I want to select this, I can. If I want to select this, I can, but at the same time, I cannot select this, because this has an inbuilt code. If I go above, and if I would want to change these numbers

[01:32:33] - [01:32:49]

I'm unable to change these numbers because these numbers are not a result of something being typed. These numbers are a result of formulas inbuilt with these other tabs of investment and assets. So I cannot just make changes here

[01:32:49] - [01:33:07]

To make changes here, see these eight elements are code driven, use markup to ask Claude to make changes to them. And this comment is exactly what markup is. All right, so you

understood whenever you want to make a simple text change, you can do that via edit. If you want to comment on a specific area, you can use comment. Otherwise, just go to the chat

[01:33:07] - [01:33:10]

type in anything, and you'll get the work done.

[01:33:10] - [01:33:26]

Perfect, guys. Now we'll move to Claude code to build something to actually take it to life, to actually host it on web. Simply just go to your desktop version and in a new chat

[01:33:26] - [01:33:31]

Just open this. This is Claude code. We have a new chat.

[01:33:31] - [01:33:38]

We have a new chat. It says, claim a \$250 bonus credit for cloud sessions. Okay, I'll take it afterwards. Don't worry.

[01:33:38] - [01:33:53]

This is how Claude code looks. This helps you code. This helps you build stuff. Okay. And it will take a lot of time. So I'll quickly take you through this in the next 5-10 minutes and then we'll take a 10 minutes break and we'll let Claude Core keep on moving

[01:33:53] - [01:34:01]

This is Claude Code. It also needs a folder to work in. It also needs a folder to work in, because

[01:34:01] - [01:34:17]

You need to understand that coding is not a single file job. Any website that you see is not a single file which has all the codes in it. How did you come to this page? Okay, don't worry, I'll just close this. I'll open this from scratch. This is my wallpaper. This is my empty desktop

[01:34:17] - [01:34:32]

I'll just go and open Claude in my desktop app instead of the web. Right now, I'm opening up Claude in my desktop app instead of the web. Once I open this up, you might see something like this. If you see something like this, you are inside Claude Code.

[01:34:32] - [01:34:50]

If you see something like this, you are inside Claude chat. Okay. To go to Claude code, go to this sidebar and come to this button. This is the difference between chat and code chat and code, chat and code. Perfect. We are here at Claude Code.

[01:34:50] - [01:35:10]

This is Claude Code. And now we need to give access to a folder. Why do we need to give access to a folder? Because whenever Claude code will be working, it will need to generate a lot of files. It will need to generate a lot of files, a lot of code bases, a lot of scripts, a lot of Python, HTML, CSS, JavaScript

[01:35:10] - [01:35:21]

I don't know a lot about these files. All I know is these files are very important for interactions, actions, buttons, colors, look and feel, layout.

[01:35:21] - [01:35:25]

Everything. Okay? Every single thing.

[01:35:25] - [01:35:30]

So now what I'll do is I'll have it at local, just a basic

[01:35:30] - [01:35:45]

Understanding that local lets Claude code run and make an edit coding files on your PC, on your system, remote, sorry, cloud makes the cloud environment. One of the examples is GitHub. You make your code base

[01:35:45] - [01:35:58]

Online, and you give access to Claude Code to actually go there, edit, make stuff, make versions, etc. You have a remote control where you can control code in someone else's machine from here.

[01:35:58] - [01:36:08]

Okay, that's how it functions. And this is same folder selection. I'll just go to my finder. What I'll do is I'll create a new folder. For example, I'll create

[01:36:08] - [01:36:12]

And new folder, which goes by the name of

[01:36:12] - [01:36:17]

Claude Port Finwin

[01:36:17] - [01:36:32]

Claude Finl. This is the folder which is empty. Make sure the folder that we're giving is empty, otherwise any other file can mess up with it. I'll just pick this folder, I'll drag and drop it to the folder's location. We have Claude Port Finwin

[01:36:32] - [01:36:36]

And I just want to get rid of this

[01:36:36] - [01:36:39]

Wait a second...

[01:36:39] - [01:36:45]

No folder. Yes. We have Claude filament attached.

[01:36:45] - [01:37:02]

Downloads, KC account stump, lot bootfin will open. See, Claude code fill is attached, and now it says, trust this workspace users, Vishwas, downloads, KC account stump, Claude Finwin. Do you want Claude code to trust this workspace? Yes, trust workspace.

[01:37:02] - [01:37:08]

We are all set to go forward. We are all set to go forward with this.

[01:37:08] - [01:37:23]

Okay, now what we need to do is we need to get the design that we made inside Claude design to Claude Code. As I just told you, these are two friends specialized in one thing at a time, extremely specialized, but they do their own stuff

[01:37:23] - [01:37:26]

So they're not taking each other's job.

[01:37:26] - [01:37:28]

But

[01:37:28] - [01:37:40]

Okay, okay, okay. Please repeat the process, I'm seeing a lot of comments, don't worry, I will repeat the process. I will go to no folder. This is how your Claude code will look, okay? This is how your Claude code will look. At the very first glance

[01:37:40] - [01:37:58]

Simple. Now, before actually beginning with anything, you need to go to your finder and make any folder where you want your files to stay, where you want your files to be generated. This

can be on your desktop or your downloads, any specific location that you're comfortable in. Just make sure it's empty. It's a brand new folder

[01:37:58] - [01:38:05]

I have made that folder here in KC accounts num and Claude Code FinWIN

[01:38:05] - [01:38:19]

I just go to Claude Chat, I'll select on this new folder, which is by default, and I'll open a folder. By opening a folder, it takes me to my finder. I'll locate this, I'll go to desktop, KC accounts dump, Claude Code Findment, and I'll open that.

[01:38:19] - [01:38:30]

That's it. Okay, that's it. We have the folder. We have given access to the folder and we have also told

[01:38:30] - [01:38:42]

Claude code that, hey, you can trust this device, you can trust this directory, you can trust this space to actually generate all the files that you need. Now comes the fun part. We'll go back to our Claude design

[01:38:42] - [01:38:47]

We are done with the design, right guys? We are done with the design.

[01:38:47] - [01:39:04]

And I'll just go share this design. Now I can share this design with anyone. If I want to make it as a PDF, I can send over as a PDF. If I want to make it as a Powerpoint, I can do that. If I want to download a zip file again, I can do that. If you actually know a bit of the code

[01:39:04] - [01:39:11]

It will download all the code base files to actually have on your system offline. But that is

[01:39:11] - [01:39:17]

a bit nerdy. That is something, if you understand code. If you don't, I'll show you how to go about that.

[01:39:17] - [01:39:24]

publish as artifact. I'll show you publish as artifact. What does it mean? I'll click here

[01:39:24] - [01:39:30]

Artifact is simply a stuff that Claude builds for you, which is a working tool

[01:39:30] - [01:39:46]

And anyone can access that with a public link. See, Anthropic uses policy prohibits use of Claude for harmful use cases like producing violent, abusive or deceptive content. Do not share personal information. All right. If I publish it to web, this is the easier version

[01:39:46] - [01:39:50]

This is the easier version, but this is a base version

[01:39:50] - [01:39:53]

So this link

[01:39:53] - [01:40:06]

is actually public. Now, if I share it. anyone with the link you guys can go on this link and get the work done. But this does not live independently. This lives inside Claude, and this has very limited use cases.

[01:40:06] - [01:40:14]

Everyone will see that this was made with Claude design, that's number one, but that's not a problem if you're using something for free, you can at least advertise them

[01:40:14] - [01:40:30]

But the problem is the domain even does not have your name. Okay, we can manage with that as well. But this is not a full fledged functional website. You cannot collect any cookies. You cannot collect any data. Right now we're working on finance example, so you do not need to collect any data. But even if you want to, you cannot.

[01:40:30] - [01:40:36]

This is just an artifact meant for viewing purposes, or something that you save for your own

[01:40:36] - [01:40:38]

self-consumption use case

[01:40:38] - [01:40:43]

Okay, so I'll just close this up. I'll go back here to Claude design

[01:40:43] - [01:40:58]

And I share it in more formats and apps, I have PNG and photo, meaning video, photo. I have MP4 meaning video. I can export it to Gamma as a, again, presentation, Google Slides as a presentation. But the most important and the most

[01:40:58] - [01:41:14]

Fun part is Claude Code. Claude Code is what will actually help you build this design into actual code bases that live independently on the web. So I'll just send this to Claude

[01:41:14] - [01:41:23]

Sending this to Claude Code gives me a specific example, specific prompt which I can copy. This I can just click on copy prompt

[01:41:23] - [01:41:42]

This is my entire prompt, which is copied. Just make sure you're a local agent and not on the web session. Make sure you are on local agent. I'll copy the prompt and I'll go back to my Claude code. Here it is. And I'll paste the prompt. This is the entire prompt. Basically, what it's doing is it's letting

[01:41:42] - [01:41:52]

Claude code. Talk to Claude design, fetch the design, and after that, what it needs to do, we will tell.

[01:41:52] - [01:42:03]

For anyone who was not able to understand, I'll just delete this, and we'll repeat the process. We are back into Claude. I'll just reduce this. Wait a second. Yeah.

[01:42:03] - [01:42:20]

Basically, what we did, this is a Claude design. I went to share this and I want to move from ads and apps. I want to share this with Claude code. I'll send this. I have a prompt to copy, but I just need to make sure I am at local agent instead of web session. Inside local agent, I'll copy the prompt

[01:42:20] - [01:42:23]

Prompt is copied, go back

[01:42:23] - [01:42:36]

Inside my Claude code, I will paste the prompt. That's it, a basic, simple, one-click copy and paste. And after that, what we will do is we will actually

[01:42:36] - [01:42:45]

tell Claude what we need to do. So, I'll just say something very simple. Very simple after this.

[01:42:45] - [01:42:57]

Implement this design as a deployable finance tracker in the attached folder. Make sure you are preserving the agreed features, dashboard, and assets liabilities, all the features that you have

[01:42:57] - [01:43:03]

Use the dummy data and keep all the saved entries in browser's local storage.

[01:43:03] - [01:43:07]

Best if all the calculations are correct or not

[01:43:07] - [01:43:14]

And best if editing actually functions. Test if entries survive a page refresh.

[01:43:14] - [01:43:17]

Test if backup and restore work.

[01:43:17] - [01:43:22]

But do not push or deploy anything until I explicitly tell you to

[01:43:22] - [01:43:29]

Show me your plan first. Ask me anything you need before you start.

[01:43:29] - [01:43:37]

This entire prompt just gives Claude code a basic idea of what we need to do.

[01:43:37] - [01:43:53]

I have given that, hey, this is main website. You need to implement this design as a deployable. What do I mean by the word deployable? Like the all... the entire code base should be ready to go on the web without any missing file, without any missing folder, without any missing

[01:43:53] - [01:44:12]

element that I need to provide, okay? Make sure you are preserving the agreed features, that is dashboard, assets, liabilities, and all the features that you have in the design. You can see the design. Use the dummy data and keep all the saved entries in the browser local storage. I do not want to see your finance data, right? So keep all the entries in the browser local storage test

[01:44:12] - [01:44:28]

If calculations are correct or not, if editing actually functions perfectly, if entries survive a page refresh, if backup and restore are working fine or not, and do not push... what do I mean by that? Because since my Claude code

[01:44:28] - [01:44:36]

is connected to GitHub, it's connected to Netlify. The process that I have to show you, it will get it done in the first click, in the first prompt

[01:44:36] - [01:44:51]

You can do that. There's no harm in doing that. But right now I need to show you the entire process. That's why I've just said do not push or deploy until I explicitly tell you to. Here we have something called this again, just like what we had earlier, but

[01:44:51] - [01:44:54]

We have 2 more options.

[01:44:54] - [01:45:11]

Manual is exactly what we restricted, what we do not want. Basically, Claude waiting every 30 seconds for your permission on something so manual, so insignificant that you do not even care about. So, Manuel will waste your time, and Manuel will keep everything under control.

[01:45:11] - [01:45:27]

Okay? After that, we have accept edits, automatically accept all file edits. This is simply the same. It'll accept everything that feels most important, most basic, but anything that feels requires users attention, it'll push you back for the same

[01:45:27] - [01:45:46]

Okay, after that, we have plan and mode. Plan mode will actually go and plan everything, first of all, in a document before we actually proceed to build something. It'll show you a plan. If you approve of the plan, then only it'll move forward. Right now, we are working on a plan board, bypass permissions is the same that we have

[01:45:46] - [01:46:05]

Bypass permissions is the same that we had in the Claude Core work. The final file, which is risky, which just never asks you, get the work done, does anything on your system, gets the work done by hook or by crook. And auto is basically Claude handles permission decisions,

what needs to go to you, what needs not to go to you. Auto and access credits are very close in this

[01:46:05] - [01:46:21]

Okay, so accelerators just edits file edits, nothing on top of that bypass permissions except all the permissions and auto decides what is something significant enough that requires your decision. So right now we'll be working on plan

[01:46:21] - [01:46:24]

And after that, we'll be working on auto.

[01:46:24] - [01:46:29]

sorted... sorted, sorted. I'll just send this prompt over

[01:46:29] - [01:46:44]

It's working, and once it shows me the plan, then I'll ask it to go forward and build that entire stuff. And that will take time, and at that moment will take a quick 5 minutes, 10 minutes break.

[01:46:44] - [01:46:57]

Okay, the first step is allow Claude to act on HTTPS Claude AI. Yes, yes. Always allow Claude code to access Claude AI. It's your job.

[01:46:57] - [01:47:00]

plan and build, I'll consume more tokens, right?

[01:47:00] - [01:47:17]

Yes, a bit more, but that will also save you tokens. How? If you actually... okay, someone, just for context for everyone, someone has asked if we go for plan and then build instead of directly building, that will consume more tokens, right? It will consume more tokens, but that is more cost-efficient way to go forward

[01:47:17] - [01:47:34]

Because if you build directly, and that is not as per your plan, you are wasting double the amount of tokens. Whereas in this format, you're just adding 5-10% more tokens. It just asks me 3-4 questions. I'll just answer them. I cannot open the design project. The design connector needs to be

[01:47:34] - [01:47:49]

needs you to run design login once it's an interactive Claude terminal, and the in-app browser is not signed in to Claude AI. How do you want to get me the files? Okay, the problem is, I forgot that my offline desktop Claude has a different Gmail ID

[01:47:49] - [01:47:52]

And my online web Claude has a different Gmail ID.

[01:47:52] - [01:48:02]

So it says, what should you do? I'll drop the files, I'll run design login, I'll sign in in the browser. I'll just say quickly, I'll sign in in the browser.

[01:48:02] - [01:48:20]

What build step do you want for the deployable app? Plain HTML, CSS, JavaScript, or white plus react or anything else? If you are an exact if you are into coding and you understand a lot of depth about this, you can choose whatever you want to, or you can go with anything else as well

[01:48:20] - [01:48:32]

But for the plane, I... all I know is for our basic static website, plain HTML, CSS, JavaScript is more than recommended. Which currency and number format should the app use? Whichever the design uses, INR or USD

[01:48:32] - [01:48:47]

Whichever the design uses. Perfect. Now it'll take me to sign in on the web, and I will complete that sign-in. Okay, please sign in to Claude AI in the browser screen that's open now. I won't enter any credentials myself. Have you signed in? Yes, use files or other. Okay.

[01:48:47] - [01:48:53]

Did it open any file

[01:48:53] - [01:48:58]

I did not open anything in my browser

[01:48:58] - [01:49:14]

So let's do one thing. Let's do one thing, just to not waste 10 more minutes. If you have your Claude desktop and your Claude web design on the same Gmail ID, you will never ever encounter this. But since I have it on different Gmail ID

[01:49:14] - [01:49:17]

I am encountering this. Wait a second, wait a second.

[01:49:17] - [01:49:27]

I by mistake like DSM signed in. So for this, I'll also show you a way through. I have share and export, and I'll download the project HTML.

[01:49:27] - [01:49:45]

downloading a project archive will give you a proper zip file in your system, in your downloads. We are having the zip file, and here it is. Finwin prototype with INR currency.zip. I'll just go back to Claude Code. It says the browser page still shows Claude AI

[01:49:45] - [01:49:56]

Here it is, sorry, sorry, sorry, here it is. Claude has its own inbuilt browser. This is the browser pane, and it's asking me to sign in to the Gmail right here

[01:49:56] - [01:50:01]

Okay, I am asking it to sign into the Gmail right here, and

[01:50:01] - [01:50:17]

I can either do that, or I can drop in the files. That's signing in is simple. You can do that as well. Just to demonstrate another use case, I'll drop in the files, and I'll add this add files and folders. I'll go to downloads

[01:50:17] - [01:50:20]

Wait a second

[01:50:20] - [01:50:21]

I

[01:50:21] - [01:50:26]

it's a better way to actually go to my finder

[01:50:26] - [01:50:31]

Where is exactly my files? FinWin prototype

[01:50:31] - [01:50:48]

Finwin prototype, here it is. I'll just locate it into the finder. The finder that we have given access to Claude Code FinWin has FinWin prototype with IANA currency. In my offline system, in my location, in my finder, I'll just say that files are in the folder that you have access to

[01:50:48] - [01:50:54]

So go ahead. Files are in the folder. Now it'll be able to read the files and get the work done.

[01:50:54] - [01:51:05]

Please let me know if this tip was confusing. I'll repeat that for you. We have two options to let Claude Code access the design that we made inside Claude design

[01:51:05] - [01:51:15]

The first and the most simple option is to go to Claude design, share this up just like we did go to Claude code, send it, copy the prompt and paste it there

[01:51:15] - [01:51:30]

But you need to have the same Gmail ID logged into Claude in both the places. If you have different Gmail IDs, it'll ask you to log in into the browser right here, by this button, and you need to log in with that Gmail ID, which had the design

[01:51:30] - [01:52:00]

And it'll move forward. If you do not have that, just download it as a zip file right from here. We'll get the zip file and place that in the main folder that you're working in, and tell Claude Code that, okay, you have the files right in the folder.

[01:52:04] - [01:52:12]

Here is our final plan. You can read the entire plan. And you can reject, revise, accept, or do anything.

[01:52:12] - [01:52:17]

Now

[01:52:17] - [01:52:20]

Let's, let's read the plan. Let's read the plan.

[01:52:20] - [01:52:44]

Your exported cloth design prototype is this is a complete working prototype. It's template plus class component extends DC logic. Okay, I don't need to know a lot about coding technicalities, okay? So let's just go ahead with this and understand what exactly is it capable of doing? What exactly is it putting on the website? Some major factors, some security concerns, approaches plain static site, no build step, perfect.

[01:52:44] - [01:53:03]

steps is render the libraries into this. Okay, again, technical complications. The point of using this wipe coding is that even if you don't understand all this, even if you don't understand all this, you should get the work done. And Chris, please wait for a while. We'll actually host it publicly by the end of the session, and you'll get the link.

[01:53:03] - [01:53:14]

Currency is this, okay, verification, it has automatically run the verifications, and nothing gets published. Demo totals, fine. Game return, fine formatting, backup, fire, everything works fine.

[01:53:14] - [01:53:34]

in the browser pane, you have it launched, the first load worked fine, and everything seems good to go. You have a CSV export, you have a mobile layout as well, you have backup restore, you have reloading button, you have a deletion, and when you actually go forward to delete, so that you do not mistakenly go and delete anything, for example, if you want to delete this entry

[01:53:34] - [01:53:37]

It asks if you genuinely want to delete this or not.

[01:53:37] - [01:53:53]

So this is very important, because otherwise, if you just click this by mistake, it will actually make an error. So right now we are back here and I'll say accept and auto mode because I have told that go forward

[01:53:53] - [01:53:55]

And build a plan.

[01:53:55] - [01:54:07]

Not build a plan, but build the website for me. So now in the folder that we see right here, it will automatically start making a lot more files. A lot more files will appear right in front of us here

[01:54:07] - [01:54:21]

And it's building. That's it. Plan approved starting the build first time checking with template constructs that converter needs a handle. A lot of technical complications about coding. We just need to understand what we need to get done. What is the problem that we're solving, okay?

[01:54:21] - [01:54:38]

That's it. Let's take a break. Shasti, let's initiate a break, and by the time, we'll be back after the break, this will most probably be done. If not, we'll take it over from there.

[01:54:38] - [01:54:43]

Yeah, sure, Vishas. We can take a quick 10 minutes break.

[01:54:43] - [01:54:44]

Perfect.

[01:54:44] - [01:54:48]

Yeah. Tim, we can quickly

[01:54:48] - [01:55:18]

Pull up the screen and take a 10 minutes break.

[02:05:06] - [02:05:15]

Okay, everyone, are we guys back from the break?

[02:05:15] - [02:05:17]

Great, we can get started, Vishwas.

[02:05:17] - [02:05:27]

Perfect, perfect. I'll start by sharing my screen. Just a second.

[02:05:27] - [02:05:35]

Guys, can you see my screen?

[02:05:35] - [02:05:39]

Yes, yes, yes, perfect, perfect, perfect. I love your enthusiasm.

[02:05:39] - [02:05:54]

We are about to get better and better, don't worry, we are about to escalate the level of using Claude. Right now, it is working for 19 minutes, it has consumed 30,000 tokens to actually build something. And if I show you the space, this was the main prototype that we downloaded

[02:05:54] - [02:06:12]

It has automatically created another folder by the name of FinWin app, which opens up to something called index file HTML, JavaScript. I really don't know how they function, but they do function. We have something called style CSS test files and vendor files

[02:06:12] - [02:06:20]

Let it be whatever it is. We don't need to make a lot of sense out of it. Perfect, fine, aligned.
Now, it will take a bit of time

[02:06:20] - [02:06:28]

Let's not waste that time, let's not wait for it. Let it work in the backend, and in the meantime, what we will do is

[02:06:28] - [02:06:47]

work on something called Claude Code Routines, and Claude Co-work schedules, okay? There is a very basic and fine difference between schedules and routines. You'll understand that. We'll start by schedules. You simply need to... oh, it's taking screenshots as well. It's working on the app on mobile. Perfect.

[02:06:47] - [02:06:52]

How great it's looking on the mobile. But let it work. Let us not disturb it.

[02:06:52] - [02:07:07]

We'll go back to the sidebar, we'll go back to the chat section, and we see something called scheduled right here. I'll go to scheduled. I'll turn this sidebar off, and we have something called scheduled task. Schedule needs to have a specific

[02:07:07] - [02:07:11]

trigger, but that needs to be like an alarm clock

[02:07:11] - [02:07:16]

Alarm clock rings on a specific day at a specific time

[02:07:16] - [02:07:21]

Right? You can also set that alarm clock rings on 15th of every month

[02:07:21] - [02:07:30]

But the entire point is, you need to specify when, and that when needs to come by objective mathematics of date, time, day

[02:07:30] - [02:07:42]

Anything like that. We have some examples like daily briefing. What needs your attention today across calendar, email and messages. You can have everything connected. And every morning before you wake up, Claude

[02:07:42] - [02:07:55]

co-work scheduled task will actually send you something over, will actually send you a proper brief of what needs your attention across your calendar, mail, and everything, okay?

[02:07:55] - [02:08:15]

We have a weekly review of what happened in the past week with all your exact meeting transcripts and everything, okay? We have content ideas every week, or every specific day, time, date, whatever you have described, it'll go on the internet, look for the kind of content that you're making, look for competitors, analyze that, and give you some more ideas

[02:08:15] - [02:08:31]

It can help you prep for meeting every weekday at 8 AM, it'll look all the meetings that you have on that day, and it will automatically look for the prospects, look for the kind of conversations, and it will prep you for the same. So we can schedule any specific task which will run

[02:08:31] - [02:08:48]

At a specific time, right? This is called a schedule. Right now, for example, we won't be using any templates, because using templates is easy. You can explore that on your own. We'll go with the new task. But for anyone who's confused, how did we get here? Simply, when you are on a new chat, just like this

[02:08:48] - [02:08:57]

You go to the sidebar and you see something called scheduled. This is what scheduled is. Just click here and you are into this tab. That's it

[02:08:57] - [02:09:03]

We click on a new task and we create with Claude just by chat.

[02:09:03] - [02:09:18]

When I say create with Claude, Claude automatically opens up a chat. It says, I want to set up a scheduled task. Briefly explain how scheduled tasks work in cowork, and then ask me a few questions to figure out what I would like Claude to do and when it should run. Basically.

[02:09:18] - [02:09:26]

I have sent a template wrong, and Claude will ask back some questions, and then I'll answer them. So, what do you want to build, guys?

[02:09:26] - [02:09:35]

I guess a daily news researcher would be fine. Like, every morning, I am able to get top 3 news about AI in the world.

[02:09:35] - [02:09:39]

So, morning briefing content ideas, lead research

[02:09:39] - [02:09:41]

I'm not sharing my screen

[02:09:41] - [02:09:46]

I am assuming everyone can see my screen

[02:09:46] - [02:10:01]

Perfect, yes, yes, yes. Imran, please try, rejoining. You'll be able to access that. So, yeah, the point was, what should Claude do on each run? Morning briefing, content ideas, lead research, something else. This is something that we have as the base

[02:10:01] - [02:10:03]

I'll go with something else

[02:10:03] - [02:10:09]

I need to define something else right here, so I'll say, I need Claude to

[02:10:09] - [02:10:20]

Go on the internet and find top three most important news in the world of tech and AI of the previous day every morning at 8am

[02:10:20] - [02:10:37]

Okay, moving ahead, when should it run? Okay, I told that earlier as well, but yeah, I'll just go on every day. What time? 8am. 8am works fine. Or maybe 7PM as an evening wrap-up, I can set it to 7pm as well, but let's go with 8am.

[02:10:37] - [02:10:46]

Where should the results go? Should they come with a phone notification, or email, or Notion or Google Drive or a folder on my computer?

[02:10:46] - [02:11:09]

You need to understand that a folder on your computer would not actually run if your computer is shut down. If your computer is turned off because there might be a day when you do not wake up at 8am. So your research might get missed. It's better if we have it in my notion or

Google Drive so that even if I'm not up, even if my device is not up, it automatically gets saved on my notion.

[02:11:09] - [02:11:16]

This looks cool. I'll just send it over, and it has answers to all the questions that it required.

[02:11:16] - [02:11:23]

Perfect. Now we'll move ahead. We'll see what exactly is this

[02:11:23] - [02:11:38]

connectors being used are Google Drive. It automatically identified that Google Drive tool needs to be used. It is creating a scheduled task, and honestly, it's as easy. It's that easy to create a scheduled task. You can just go ahead, make a schedule task. It will automatically write all the beef

[02:11:38] - [02:11:42]

About every single thing that needs to be done, I will schedule this

[02:11:42] - [02:11:55]

and it's done. It's like the easiest Claude task ever. You can schedule anything. You can schedule anything. It's happening inside my desktop. It's happening inside my desktop app and not on web app, okay?

[02:11:55] - [02:11:58]

Yes

[02:11:58] - [02:11:59]

Yes, yes, that's the point.

[02:11:59] - [02:12:18]

my scheduled task will run even if my machine is turned off, even if my internet access is not being given to the machine. It will turn on. It is automatically wired into Claude's system this way. Someone is asking, what is dispatch? Dispatch is still in a beta version, and dispatch is basically when you

[02:12:18] - [02:12:32]

Ask Claude code to run on a task which, for example, Claude code is running on a task which is 4 hours long, and you have to go somewhere. You're not going to carry your laptop or a PC with you, right? So you will just have your phone

[02:12:32] - [02:12:49]

And you can control some basic edits, some basic approvals on the functioning of Claude Code or Claude Core work, which is running on your system, on your laptop, from your phone anywhere else in the world. That's that process is running, but dispatch allows you to edit stuff

[02:12:49] - [02:13:07]

accept permissions. Beta version is basically something that the company has made, but the company has not finally polished it. Like, imagine beta version is something which is 70-80% ready. People can try, people can give feedback, and then they'll launch the 100% ready version

[02:13:07] - [02:13:24]

Perfect. This is a part of co-work, guys. You just have to go to system simply here in the chat and you'll find something called scheduled. And we have the scheduled task here. And one of our active scheduled tasks is this daily tech and AI brief. It will automatically fire at 8am.

[02:13:24] - [02:13:35]

But how would I know if it'll fire at 8am or not? Let's try. Let's click at these 3 dots, and we can pause, edit, delete, or run now. When I run now.

[02:13:35] - [02:13:36]

I will

[02:13:36] - [02:13:42]

When I run now, it has automatically started moving on.

[02:13:42] - [02:13:48]

I'll see this. Wait a second. The latest chat will be about this.

[02:13:48] - [02:13:51]

See.

[02:13:51] - [02:14:06]

It's running. It's running the scheduled task. Someone is asking, how is it possible that it will work even if your laptop is off? That is what I was telling you. If your task requires, if your task requires to access something on your folder, on your system, for example, if I say

[02:14:06] - [02:14:20]

Every morning at 8am, you see any sort of mess in this folder, clean this up. That is not possible if your system is off. That is only possible if your system is turned on and it has an active Wi-Fi connection or internet connection by any means whatsoever.

[02:14:20] - [02:14:23]

But if I'm looking for a research

[02:14:23] - [02:14:34]

Claude lives on the server. Internet is on the server. Data is on the server. Research will happen online. So why do you need my device

[02:14:34] - [02:14:45]

I have given access, I have given the task, go ahead, do the job for me, and set that over in my Notion or Google Drive. It will function even if my device is turned off.

[02:14:45] - [02:15:01]

That's the match. Okay, if, for example, you want to cold email to someone, if you are in a specific industry, you want a job, or you want some clients in your business leads or anything, you can set a task, you can set a scheduling task that every morning at 8am, look for 5 most potential clients

[02:15:01] - [02:15:05]

Research about their accounts, write

[02:15:05] - [02:15:11]

And then personalize emails and send them personalized emails. Now, all this can happen without your system being turned on, okay?

[02:15:11] - [02:15:22]

Can we get it via email? Where do we see it? Yes, you can. If you remember, I got multiple options when I was setting the scheduled task, I got multiple options on where do I want to get this.

[02:15:22] - [02:15:37]

I actually chose to get it on Google Drive via a Google Doc by the name of Daily Tech and AI Brief folder. This is what I chose to have. You can, you can go and choose

[02:15:37] - [02:15:43]

To get the update via Gmail or your phone notification, or whatever you want to have.

[02:15:43] - [02:15:50]

I'll go back here, and it's still working. Let's see if our code session has made it.

[02:15:50] - [02:15:58]

Oh, our code session has made it. So do you want to actually

[02:15:58] - [02:16:15]

Perfect, perfect. I'm just reviewing the chat section. Can Claude send an email to me? Yes, it can. This is in desktop chat version. Yes, it is. And Claude code is also done. Files are in FinWin app. All the files are ready inside FinWin app. Our entire website is ready to go live

[02:16:15] - [02:16:23]

We'll first understand schedule tasks, so that there's no... not a lot of confusion, and once that is done, we'll get to building this.

[02:16:23] - [02:16:25]

Building our website

[02:16:25] - [02:16:31]

It's working, it's working, it'll be done in, like, one more minute.

[02:16:31] - [02:16:42]

This current activity is in which Claude module schedule task. Yes, yes, Anmol, it is in schedule task. Can we give commands, tasks through WhatsApp or Telegram? No.

[02:16:42] - [02:16:55]

No, you cannot. That is a complex process. From WhatsApp, you cannot. From Telegram, you have to build a proper AI automation via Make or anything, Zapier, and you can

[02:16:55] - [02:17:07]

actually talk inside Telegram, which will, at the back end, use Claude and that requires another kind of recharge. That is something different. Can you state what is dispatch? As I just told you, dispatch is something that lives on your phone. You have a phone

[02:17:07] - [02:17:25]

Your main task is being done on laptop. Claude code would not run on your mobile phone. You let Claude code run on your laptop, okay? You leave it, you go watch a movie, you go shopping, you do anything, and for minor permissions, you can access Claude Dispatch on your mobile phone and approve those permissions.

[02:17:25] - [02:17:41]

So we have this scheduled task ready. It has sent a notification. We have a doc ready, and this is it. It started at 9 35, not 8 am, because I asked it to run right now. And tomorrow morning, 8 am, it'll automatically be updated.

[02:17:41] - [02:17:43]

Right now, if I click on this link

[02:17:43] - [02:17:48]

And I want to open this link. It has opened this link

[02:17:48] - [02:17:59]

And here it is. This is a proper Google Doc in my Gmail ID, which I was which I had connected. And this gives tech and AI brief Wednesday, 23rd September IST

[02:17:59] - [02:18:17]

It is about yesterday because my scheduled task has to run early morning, and that will, by default fetch everything from yesterday. Okay, so first update is Altman and MODI take AI safety to UN Security Council. Okay, interesting. Second update is YouTube Hands Creator and AI editor

[02:18:17] - [02:18:25]

Live dubbing and a three-way cut testing. And the third update is Google's new Gemini voice models build a voice from a text prompt.

[02:18:25] - [02:18:26]

Perfect.

[02:18:26] - [02:18:35]

These are the top 3 updates of the day, and every morning I'll be getting such updates right in my Google Drive in a folder with new docs every single day.

[02:18:35] - [02:18:44]

Perfect. That's sorted. I'll just close this up, and we are done with this. Now, I'll go back to my Claude code

[02:18:44] - [02:18:47]

and my chat. And here it is

[02:18:47] - [02:19:07]

Alright? We'll go back to browser to actually understand more about GitHub and Netlify, the two tools that we are going to use today. I hope you have the basic idea of what GitHub is and what Netlify is.

[02:19:07] - [02:19:16]

I see a lot of yeses, a bit of no's for anyone who does not understand, I'll just give you a brief

[02:19:16] - [02:19:41]

But just a second, I'm logging into GitHub. It has asked for an OTP. Just give me a second.

[02:19:41] - [02:19:45]

I guess GitHub is down

[02:19:45] - [02:19:48]

It's not letting me log in.

[02:19:48] - [02:19:53]

Just a second, I'll try it once again on a different browser, otherwise

[02:19:53] - [02:20:23]

This is an issue

[02:20:24] - [02:20:48]

Yes, we got it, we got it, don't worry.

[02:20:48] - [02:20:52]

It'll just take one more minute, at max

[02:20:52] - [02:21:22]

And it's good to go after that.

[02:21:29] - [02:21:44]

Really sorry, guys, but here we are. Here is my GitHub, and I just showed you Richie Rich, if you remember. This was the last repository that we made in the last session. For the very first website in the beginning of this session that we demonstrated

[02:21:44] - [02:22:00]

But yeah, right now I have the GitHub ready. What I need to do is something extremely simple, extremely easy. I'll just go to these three dots. I will make a new I'll go to home. That's the very basic first step. I'll create a new repository. New repository will come by name

[02:22:00] - [02:22:16]

new repository will come by description, visibility, and everything will sort that up, but... but just a heads up, if you want to make this entire process easier, I will not. I will take you through the most detailed way, but since I have

[02:22:16] - [02:22:20]

My GitHub connected to my Claude code, I can just type in a prompt and say.

[02:22:20] - [02:22:34]

Add this repository to my GitHub and my work will be done. If you have your GitHub connected, you can simply just go and say this, but we won't. So don't worry. We won't

[02:22:34] - [02:22:45]

You have your system ready? I am Rajiv. I have not completed demonstrating. Just give me a second. My code base is ready. If I go to my finder, this is my entire code base, which is FinWin app.

[02:22:45] - [02:22:53]

And why add it to GitHub is a very brilliant question, Helen. I'll get to that. Just give me a second. We are here on the web. Where is my GitHub?

[02:22:53] - [02:22:56]

That is

[02:22:56] - [02:23:03]

Here is my GitHub. I will go back to my home section. This is my home. Okay. And I'll go back to create a new repository.

[02:23:03] - [02:23:19]

As simple, new repository. New repository is like a space for your new code base. Did it share the list of tests it completed? Yes, it did. Claude Code has done everything so perfectly, and no new errors. It had multiple checks. It also

[02:23:19] - [02:23:32]

had it open in the browser before publishing, before publishing, you can just go forward and see if it works fine in the browser as well. You have the inbuilt browser of Claude Code.

[02:23:32] - [02:23:48]

Here is a local host link. You can actually see and check it on the localhost link before you actually go forward and upload it or publish it, okay? You can open this and check everything that you want. You can clear demo data, you can check all the holdings or whatever it is

[02:23:48] - [02:23:54]

So, I feel it's fine. I feel it's working fine. I can also see mobile site, how mobile would function

[02:23:54] - [02:24:08]

How this would look on mobile phone. But yeah, now I will show you how to add all this to GitHub. Look at this closely. We are creating a new repository. What is the name of repository?

The name of repository is FinWin

[02:24:08] - [02:24:14]

A new repository will be created by this name. A description is a personal finance tracker app.

[02:24:14] - [02:24:30]

Very basic. Visibility, either it's public or private, I'm using it to private. And this private does not mean if my website is private or not. That is a different step. If my code base is private or not, I want my code base to be private, okay? And ignore these three things. They don't matter a lot, just basic

[02:24:30] - [02:24:46]

If you need README files, if anyone else accesses your code base, do they need to have a proper README file which explains everything? Add gitignore. Gitignore is a file which is made for the website, but which is asked to ignore by GitHub. So that is a different file

[02:24:46] - [02:24:49]

And you don't need about that

[02:24:49] - [02:25:04]

If it's private, can Claude or Netlify access that? If you give your personal Gmail ID and access to them, Claude and Netlify will be able to access that. But making it public makes sure that everyone on GitHub can access that. People on GitHub actually make some stuff which is cool enough

[02:25:04] - [02:25:22]

for people to access for free in public. So that is where you use public. Right now, I'm creating this repository, and this repository will basically be an online version of all my codebase files, okay? This is an online version of all my codebase files.

[02:25:22] - [02:25:37]

Now, I'll simply go and import everything. Get started by creating a new file or upload an existing file. Okay, now I'll just go and upload an existing file. This is where I drag my files. So I'll go back

[02:25:37] - [02:25:44]

And this is the FinWin app built by Claude code. I'll just drag and drop this here.

[02:25:44] - [02:25:54]

This is uploading all the 12 files. and it's ready. I won't move ahead until I see a lot of yeses in the chat. Am I aligned? Am I clear? Am I slow enough?

[02:25:54] - [02:25:58]

Perfect, perfect, perfect.

[02:25:58] - [02:26:00]

Perfect.

[02:26:00] - [02:26:01]

Perfect

[02:26:01] - [02:26:04]

Now, I'll commit the changes. Done

[02:26:04] - [02:26:08]

It's processing my files

[02:26:08] - [02:26:17]

It will take a bit of time, and we have it ready. My FinWin app is ready with all the files required. Perfect.

[02:26:17] - [02:26:20]

Let it be right here only, okay?

[02:26:20] - [02:26:31]

Show where you pull the files. Okay, this is the folder which we gave access to Claude code. Claude code from the beginning was working in the folder, if you remember

[02:26:31] - [02:26:48]

Claude quote from the beginning was working in a specific folder. This is the folder Claude Code Finwin. We gave access to this folder. Claude code ended up building all the files in this folder right here. These files were not given by Claude design. Claude Code made these files.

[02:26:48] - [02:26:51]

And we dragged and dropped all these files onto GitHub.

[02:26:51] - [02:26:57]

Now they live online. How I drag and drop? Just simply go to Add File

[02:26:57] - [02:27:13]

Upload files, you'll see something like this. This interface. Just go back, go to your folder, click, drag, bring it up to this site, and upload it. Or maybe if you are finding dragging and dropping uncomfortable, just click choose your files, locate your files wherever you want to

[02:27:13] - [02:27:17]

And then just get it done. That's it. It's that easy.

[02:27:17] - [02:27:31]

Now, the point is to actually understand how to get it online. Right now, we don't have a link, right? I'll just go to a website called Netlify. Netlify is

[02:27:31] - [02:27:43]

A God's work website. Netlify allows you to take any project live without paying for hosting. Now, what does hosting mean? Imagine the entire internet is a big piece of land. If you want to build your apartment, build your house

[02:27:43] - [02:27:48]

On that land, you need to either own that land or rent that land.

[02:27:48] - [02:27:52]

For the longest time, we had the concept of renting online spaces

[02:27:52] - [02:28:11]

which was called hosting, and for any website that you had to publish, you need to pay a small amount for hosting. But in the last 3, 4 years, you have a lot of options to host for free. One of them is Netlify. Versal is also one of them. Don't worry, I appreciate your enthusiasm about versa, and you can do the same thing on Versal as well. But

[02:28:11] - [02:28:28]

Right now, we are going with Netlify. This is how the Netlify's homepage looks. I'll take this up. Wait a second. I've just signed in and this is how the Netlify's homepage looks. These are my four earlier projects that I have. Don't worry about them. We are going to rebuild something from scratch

[02:28:28] - [02:28:37]

This is my project and usage and billing, just to show you, I'm on a free plan. I am on a free plan and I have 268 credits left

[02:28:37] - [02:28:42]

So I go to projects. I add a new project.

[02:28:42] - [02:28:44]

Add a new project

[02:28:44] - [02:28:59]

Okay, crazy thing, I can actually use Claude inside Netlify in this chat box. Describe your idea, the agent codes and configures for you. Like, this chat box will help me make something. If you want to build something very small

[02:28:59] - [02:29:14]

Something so direct where design does not matter a lot. You can just come directly to Netlify, get the work done and publish that site. But right now we took a longer route because we had so much specifications in our website. We had so much personal preferences

[02:29:14] - [02:29:19]

But otherwise you can use Claude agent right here and get the work done

[02:29:19] - [02:29:26]

Alright? But right now, we are bringing our own code. Where are we bringing our own code from?

[02:29:26] - [02:29:29]

I guess we are bringing it from GitHub

[02:29:29] - [02:29:34]

We are bringing it from GitHub. Just a second. I'll turn it to light mode

[02:29:34] - [02:29:44]

Wait a second, light mode, light mode

[02:29:44] - [02:29:59]

I can't find it. Just bear it with me, it'll just take one more minute, not more than that. Okay, projects, new project, and add new project, which asks the name and I can import a GitHub repository for the first time

[02:29:59] - [02:30:06]

I can I can just connect my GitHub permanently and then it accesses my GitHub

[02:30:06] - [02:30:15]

It'll ask me to sign in. Right now, I'm not signed in, so it will ask me to sign in. I see a very common question, just wait for two more minutes, I'm going to clear that confusion as well.

[02:30:15] - [02:30:31]

For the first time, it'll ask me to sign in, but once I've signed into GitHub, it won't ask me to sign in again and again. I'll just take this off the screen share and I'll complete the sign in

[02:30:31] - [02:30:34]

It says, looks like something is off

[02:30:34] - [02:30:36]

As expected.

[02:30:36] - [02:30:45]

I don't know why is it coming again and again. Give me a second, I'll sort this up.

[02:30:45] - [02:30:50]

We'll open Netlify in another tab, Netlify

[02:30:50] - [02:30:53]

This is Netlify

[02:30:53] - [02:31:05]

Login

[02:31:05] - [02:31:18]

I'm logging into a different ID from Netlify. I'm using two screens. For anyone confused, I'm using just two screens.

[02:31:18] - [02:31:23]

Okay, here we are. Here is a different Netlify ID.

[02:31:23] - [02:31:35]

And I have signed in, I'll just go click GitHub, and this will open a GitHub sign-in, and this is automatically authorized. Since this is authorized, it wants to know which one do I want

[02:31:35] - [02:31:38]

to add. But the problem is

[02:31:38] - [02:31:52]

This GitHub does not have that. Okay, again, a problem with two different IDs. I just need to resign in to GitHub

[02:31:52] - [02:32:10]

FinWin, here it is. Here it is, Finwin. I'll click this up. We have a proper deployment tab inside Netlify, which asks me to ensure that I am working on the right repository. This says that review configuration. Okay, the team is my team name. I can name it a different project, which is

[02:32:10] - [02:32:27]

It's not different. It can fetch the name automatically from the GitHub's project name, but if I can add that up, that will automatically be added to my domain. So this will be the final link that you can see right here, which you all will be able to click and access the website that I'm making

[02:32:27] - [02:32:36]

Now we have build settings. This all, let's leave it as it is, and let's not change a lot of stuff. At the end, we'll see a button called deploy FinWIN.

[02:32:36] - [02:32:43]

Deploy FinWIN. I'll just click on this button, I'll wait for it to be done, and it'll take, like, 2 minutes

[02:32:43] - [02:33:00]

By then, I'll ask two most important questions. Did you make the FinWin app and GitHub public? No, I did not. Inside GitHub, if you see, it's still private here. Wait a second, wait a second. Yeah, it is. It is private. The difference between private and public

[02:33:00] - [02:33:16]

is that any one of you can access a public link, but a private link can only be accessed by someone who I give permission to who has the permission from me privately link does not mean that no one apart from me can access. Okay.

[02:33:16] - [02:33:36]

Private link simply means that anyone who has the permission from me can access that file, and they can also change the files if they have permission from me. It's all about permission. You make a Google Doc, you share the link. If you open it to anyone, anyone on the web can access that. If you allow a specific Gmail id to view, edit, or comment on that file, that is a private link

[02:33:36] - [02:33:52]

If you built it for someone, would you keep it private or just to them? That's the confusion that I'm trying to clear. There are two different steps. One is a website, one is a code base. I want all of you to access the website, but I do not want all of you to access the code base

[02:33:52] - [02:34:07]

You use Amazon, you shop on their servers, but you never see the basic coding of Amazon, right? You use Netflix, you use WhatsApp, you use Instagram, but you never see the code base. Code base is not public

[02:34:07] - [02:34:19]

No one of you can access how FIN1 was made. But all of you can access the website of FinOne and it is public. It is public. I can just go to this link

[02:34:19] - [02:34:27]

And it is public. Page not found, okay, there is some problem. There is some problem

[02:34:27] - [02:34:36]

We need to sort that up.

[02:34:36] - [02:34:51]

page not found. Looks like you've followed a broken link or entered a URL. Page not found.

[02:34:51] - [02:34:53]

Wait a second.

[02:34:53] - [02:34:57]

Deployed from GitHub, okay, we can see the GitHub stuff

[02:34:57] - [02:35:06]

And

[02:35:06] - [02:35:36]

Let's go back to deploy settings and see if there was something that we did wrong.

[02:35:36] - [02:35:47]

A folder is sorted, it has everything. The Netlify deployment process was sorted, but it does not have anything. So let's talk to the agent.

[02:35:47] - [02:35:54]

Look at the website and let me know what broke down exactly and why is it not able to look at the page.

[02:35:54] - [02:36:09]

I'll just ask and I'll not build right now. I'll just ask and it will actually answer me. Is it credits?

Yes, it has credits, but it has free credits. On a free account, you get 400 credits, and you'll see what exactly is something being done right here on Netlify.

[02:36:09] - [02:36:24]

The entire point is you'll see a lot of points in your entire workflow of doing anything via AI coding or anything else. But you don't have to stop. You have to ask it right back at the face of AI and get the work done.

[02:36:24] - [02:36:34]

Okay, now coming back for everyone asking, why did not we upload the exact folder from our offline data into Netlify?

[02:36:34] - [02:36:49]

into Netlify. The reason is, right now, if I go to my GitHub, I can make any of the changes here in the code. Right now, I can go to the GitHub, and I can make any of the changes in the code, and they will automatically be reflected on my website. Because all the

[02:36:49] - [02:37:05]

code base of my website lives online, and any change that I make gets done. Okay. But if I have had that in my offline folder, any change that I make, I'll always have to delete that and upload that.

[02:37:05] - [02:37:21]

Delete that file, re-upload that file. That is a lengthy process. Two, GitHub allows your teammates to work on the code base along with you, and that is a very important use case. It's investigating, and it has investigating. Investigation is done

[02:37:21] - [02:37:22]

Okay, what is the fix?

[02:37:22] - [02:37:26]

It has suggested a fix, so I'll just say

[02:37:26] - [02:37:41]

Up in the repo route, so index... oh, okay, okay, okay. The problem is, all this should sit up in the main folder, not in a subfolder. That's it. That's it. I will show you one change on GitHub, guys, don't worry. I will show you one change on GitHub. I have that in my plan.

[02:37:41] - [02:37:46]

I will just go back here. I'll delete this

[02:37:46] - [02:37:55]

I'll delete this file

[02:37:55] - [02:37:59]

What we'll do is we'll add more files, basically

[02:37:59] - [02:38:00]

Finwen

[02:38:00] - [02:38:06]

There is a FinMIN, we'll select everything up, and we'll add it here.

[02:38:06] - [02:38:09]

It's uploading all of them

[02:38:09] - [02:38:13]

Will the change in GitHub reflect in the local folder? No.

[02:38:13] - [02:38:23]

Eugenjing, anything in your Google Drive will not reflect in your system. That's exactly how GitHub works.

[02:38:23] - [02:38:26]

Here it is. If I go back

[02:38:26] - [02:38:31]

If I open projects here

[02:38:31] - [02:38:33]

If I open FinWin

[02:38:33] - [02:38:53]

If I open this, did it work? Yes, it did work. The only problem was the folder inside a folder in GitHub, which should not be the case. And now we have our website running up and running. I'll quickly share the link with all of you so you can see if it functions on your devices as well, and within next one minute

[02:38:53] - [02:38:57]

We'll move ahead with something more interesting that is Claude routines

[02:38:57] - [02:39:23]

And how is it different from Claude Schedule tasks? And we'll understand how you can make changes on your GitHub, and they can be reflected live.

[02:39:23] - [02:39:34]

Can you... can you open this link?

[02:39:34] - [02:39:40]

Perfect.

[02:39:40] - [02:39:49]

I guess we should move ahead. It's clean, it's good, it's working perfectly. But the point is, the fun part is, the best part is that it's only for you.

[02:39:49] - [02:40:06]

Any data that you put in is not reaching me. Any data that you put in is never reaching my server. Where will the data be stored? The data will be stored in your browser's own cookies, okay? Now, coming back, where is the dummy data? Okay, did I clean up the dummy data? Maybe that

[02:40:06] - [02:40:12]

No, I can see the dummy data. The dummy data should be with you. You might have cleared, click this button. That's it.

[02:40:12] - [02:40:15]

Now, going back at it

[02:40:15] - [02:40:25]

Going back at it

[02:40:25] - [02:40:39]

Alright. I was about to tell you how to make changes in your GitHub and how does Claude routine work. So what we'll do is we'll understand the concept of a Claude routine. Then I'll make change because that is a part of the entire bigger example.

[02:40:39] - [02:40:43]

First of all, without looking at the screen

[02:40:43] - [02:40:50]

Without looking at the screen, look at me and understand the difference between schedule and a routine. Schedule runs like an alarm clock.

[02:40:50] - [02:41:06]

A specific day, a specific date, a specific time, and it will fire itself. A routine runs with a trigger. Routine can have any other trigger, and it's not necessarily an alarm clock, okay? For example, if I say

[02:41:06] - [02:41:20]

that whenever... please listen to me carefully, please listen to me. Do not try using the app right now. You can do that after the class is over. Please be focused. We have to wrap this up in the next 30 min, because you have a hackathon after that

[02:41:20] - [02:41:22]

So right now

[02:41:22] - [02:41:26]

what we are going to do is we'll create a routine called

[02:41:26] - [02:41:42]

FinWIN reviewer. How to go about a routine. Let's look at the interface first. You are inside coding interface. Make sure you are at code and not at chat. Inside your desktop app, you are inside code. Click at More, and you see routines here.

[02:41:42] - [02:41:54]

This is your routine, okay? You have a lot of templates and you have your routines templates, anything that you want to do. Now, what we are going to make is a new routine.

[02:41:54] - [02:42:00]

As I just told you, routine works with a situational trigger and not a specific daytime.

[02:42:00] - [02:42:07]

You can have a trigger which might make the routine work 10 times in a day, or maybe

[02:42:07] - [02:42:22]

one time in 10 days. It depends on a trigger. Right now, what I'm going to build is FinWIN reviewer, so that every single time, every single time there is a change in the code base on GitHub

[02:42:22] - [02:42:32]

It gives me a summary. Okay, I'll just make a new routine. I'll make it on cloud. This is the fun part. I'll make it on cloud, and I'm making it on GitHub. What is the name?

[02:42:32] - [02:42:48]

The name is Finn Wynn reviewer. You can make it offline as well. If your specific requirement requires it to be made offline, you can make it there as well. Instructions, what it should do what describer Claude should do in each session

[02:42:48] - [02:43:05]

Opus 4.5 works fine for me. We need to select a repository, and here is my repository called FinWin. I have given access to the repository. Since it's already connected to my GitHub, it knows which repository it is. And environment is default, let's not mess up with that. We have a lot of connectors to be used

[02:43:05] - [02:43:07]

And

[02:43:07] - [02:43:22]

Claude can use all these connectors, but we do not need any of these connectors, so eventually we'll be wasting a lot of credits. So I'll just, cross all these connectors, because I do not need any of these connectors for my specific task.

[02:43:22] - [02:43:38]

You can have them on also, but they'll just waste a few of credits which you do not need, okay?
What is a trigger? A trigger can come from three places. A trigger can come from schedule, which is just like a scheduled task, which can come with a date, time, date, anything like that

[02:43:38] - [02:43:52]

A trigger can come from GitHub event. Anything like GitHub event that you can just have any change there or API. API is basically

[02:43:52] - [02:43:54]

Imagine

[02:43:54] - [02:44:07]

Let me... give me a minute to think of an example.

[02:44:07] - [02:44:15]

Yeah. Have you guys used UPI?

[02:44:15] - [02:44:31]

Yes, yes, yes, perfect, perfect. If someone says no, I'll tell you what a UPI is. UPI is Unified Payments Interface, and you can make payments from your bank account just by scanning a QR code and typing in a pin. It's like revolutionary payment interface

[02:44:31] - [02:44:37]

In India. So basically, when you're using a UPI app, a UPI app

[02:44:37] - [02:44:42]

And you scan a QR code, you type in the PIN, password

[02:44:42] - [02:44:47]

If that password is right, for example, that UPI app name is Paytm right now.

[02:44:47] - [02:44:54]

PTM automatically on the back end reaches your bank. That bank can be HDFC, SBI, BNB, any of the bank

[02:44:54] - [02:45:10]

That reaches your bank from the backend that uses a mechanism called API that gives an extremely long key, which is filled with alphanumeric keywords. ABC XYZ123 hash star, a lot of stuff, a very complex password-like structure, which is not

[02:45:10] - [02:45:12]

at all possible to remember

[02:45:12] - [02:45:32]

And that API connection is something that that API connection is something that approves the payment from the main bank which releases the payment. So, for example, here in this case, we can trigger from our own code being used by someone else by an API. Right now, what we need is a GitHub event

[02:45:32] - [02:45:41]

Okay, we need a GitHub event. Perfect. Pull request open. Okay, just giving you a bit more context. Pull request open means

[02:45:41] - [02:45:53]

For example, I am the owner of FinWin, okay? And Saksham is one of my teammates working on the code base along with me. I'm the owner. Saksham is my teammate working on the code base.

[02:45:53] - [02:46:03]

Even though he's my teammate, even though I trust him a lot, I would not like him to post or publish anything on the website without my approval. I would like him to work

[02:46:03] - [02:46:20]

As his passion, I would like him to work with all his creativity with full freedom, but while making sure that whatever he does gets approved by me before getting live on the website. Is it fair, guys? Any team you're working in, any small product, any big product

[02:46:20] - [02:46:25]

No change has to go live without approval by the team leader.

[02:46:25] - [02:46:41]

So anything that Saksham will edit inside GitHub will be created as a pull request. Pull request is basically a request, a pop up for the team leader to approve and that approval is called commit

[02:46:41] - [02:46:52]

So, pull request, shortened for PR, we say PR very commonly. I have raised the PR means I have made some changes. Please review them

[02:46:52] - [02:47:07]

After reviewing what you do, approve, and approve is called commit here. So basically, we have set it to pull request open. This is a trigger. This trigger means this routine will automatically get fired whenever this gets

[02:47:07] - [02:47:14]

triggered. Perfect. Now, what I want to do, the main part, the instructions, okay? I'll say

[02:47:14] - [02:47:20]

A pull request was just opened on FinWin.

[02:47:20] - [02:47:33]

Review only what this pull request changes and nothing else. Check whether the change breaks any sort of basic fundamental maths. The net worth mathematics, the fire calculators

[02:47:33] - [02:47:38]

the basic interconnectivity flowcharts

[02:47:38] - [02:47:47]

Or if it changes any file that the app depends upon or whether if it exposes personal data or keys

[02:47:47] - [02:48:02]

Leave one comment on the pull request either looks good with one line telling why it looks good, or what's wrong with the exact fix suggested. Do not ever change the code yourself, just give me

[02:48:02] - [02:48:11]

A second opinion of if the pull request looks good. If yes, then why? If not, then what to do?

[02:48:11] - [02:48:27]

Am I clear, guys? This is how you talk. Basically, I'm instructing Claude Code to do something whenever a pull request is open, just go review that and sure if it does not changes or messes up with any of the fundamentals of my system because that is something that I do not want to have.

[02:48:27] - [02:48:42]

And after that, leave a line right there only, okay? This is sorted, this is sorted. I can add any connectors if I want to, but right now it's not needed, and I will go and create.

[02:48:42] - [02:49:02]

Perfect! My FinWin reviewer is created. There is no history. I can run it right now, but it won't function, right? It won't function, because there is no pull request. Now, I'll show you how GitHub functions. The reason we made it live via GitHub and not an offline folder, because if we wanted to

[02:49:02] - [02:49:17]

I can just go forward and like, for example, I again go to projects, I can go to a new project, and here I can go and choose the entire folder of this, and I can drag and drop right into Netlify. It will publish, no worries. But then changing things gets

[02:49:17] - [02:49:18]

Tough

[02:49:18] - [02:49:33]

Right now, coming back here to our GitHub, what I'll do is I'll go to the index HTML. Okay, my index HTML is my main base file, and it has a very basic 25 lines of code

[02:49:33] - [02:49:37]

I'll just search something which is rich, sorry, not rich, Finl

[02:49:37] - [02:49:43]

Where is the name? Where is the title? Finwin. Here is our title, Finwin. Okay, we see this.

[02:49:43] - [02:49:51]

We see the title Finwin. Simple, easy. We see the title Finwin. I'll just do, I'll change this title to Finwin

[02:49:51] - [02:49:55]

Oh, wait a second...

[02:49:55] - [02:49:58]

I need to edit this. I need to edit this file

[02:49:58] - [02:50:09]

And this opens like this, I'll change this title to FinWin Pro. Very simple change. The simplest change ever possible. I want to change the title and

[02:50:09] - [02:50:21]

What I can do is, one, I can commit the changes, which is something risky, but since when you'll be allowing access to your teammates, you won't even give them this button to commit the changes

[02:50:21] - [02:50:26]

Okay, you won't even give them this button to commit the changes. They will only be able to

[02:50:26] - [02:50:34]

pull, make a pull request on the changes, okay? Now, what we'll do is, we won't be doing this in main.

[02:50:34] - [02:50:43]

It will make a branch. What is a branch? Again, a bit of the theory. Please bear it with me. It's barely 5 more minutes.

[02:50:43] - [02:50:59]

Imagine a flowchart. Imagine a tree where we have our entire code base. Now, in order to make a change and actually review that change, we do not want to mess up with the actual code. So we create a parallel branch which is just like a duplicate. And that duplicate

[02:50:59] - [02:51:14]

Helps you demonstrate and see whatever works fine, whatever does not work fine, whatever need any changes, approvals, permissions, and then you merge that with the main branch. So right now, this is my main branch. This is my main branch, okay? And

[02:51:14] - [02:51:25]

I can go, and I can just make another branch, find or create a branch. I can create a branch one. Create branch one from main.

[02:51:25] - [02:51:34]

I just click here and it is created. Now we have two branches, branch one or main branch. Chris has a very important question. When do you need a branch?

[02:51:34] - [02:51:40]

For example, right now, what am I doing? I am just changing the name from FinWint to FinWint Pro.

[02:51:40] - [02:51:53]

I don't see any issue going back from here. So I'll do it in the main branch only. I'm not doing just to demonstrate you, but I'll do it in a real scenario. But if I'm making a change big enough that if I ever want to go back

[02:51:53] - [02:52:07]

That will take a lot of time. So why, why should I give a lot of time to go back in actual coding if I can have a duplicate, if I can have a branch? Now I'm working in branch one. Branch one is right now up to the date with the main branch, and I'll now go to the index file

[02:52:07] - [02:52:10]

And I'll now edit this file

[02:52:10] - [02:52:15]

I'll now change the name

[02:52:15] - [02:52:17]

To

[02:52:17] - [02:52:20]

FinWin Pro

[02:52:20] - [02:52:21]

Okay?

[02:52:21] - [02:52:28]

I'll now change the name to FinWin Pro

[02:52:28] - [02:52:31]

Just a second.

[02:52:31] - [02:52:34]

We are working in branch one. Perfect.

[02:52:34] - [02:52:50]

We have these two branches right here, main and branch 1, working together. Main is our default branch, branch 1 is the right current active branch. This is fine. And this is a section for all the pull requests. We do not have any pull requests open. I was just

[02:52:50] - [02:53:06]

Ensuring this we do not have any pull request open right now, but we can make a new pull request, okay? We can make a new pull request. I'll show you how to do that, but let's just

answer one thing. How to make a new branch? How to automatically push everything to a new branch? Okay

[02:53:06] - [02:53:21]

This is going to get a bit technical, but just understand, you originally are working here in the main version. This has all the code base files which you need. Perfect. You click on this first button in the main or branch one. I have branch one because I just created that.

[02:53:21] - [02:53:32]

It says, find or create a branch. If you can see here, find or create. If you can type anything, I can type Vishwas Girdhar, it'll create a branch by this name

[02:53:32] - [02:53:43]

Create a branch, Vishwas, Ghida from main branch. And it will automatically duplicate and fetch everything together. So just type in a name and create that app. Right now, we have something called branch one. Perfect.

[02:53:43] - [02:54:02]

Now we go to pull requests. We go to pull requests. We go to new pull requests. Since I'm an employee, I do not want to commit any changes or I don't have any permission to commit any changes. I'll create a new pull request where in branch one or in the main branch in branch one

[02:54:02] - [02:54:04]

We don't have anything to compare

[02:54:04] - [02:54:14]

Don't worry, we'll go back to the main code. Right now, this was the interface that you'll see after you have something to compare. And we'll go back to index file

[02:54:14] - [02:54:20]

Okay, we'll go back to the index file, and we'll again now edit something

[02:54:20] - [02:54:25]

We'll make it. Finally, we'll make it FinWin Pro

[02:54:25] - [02:54:32]

And we'll click onto commit changes and it shows you some option. Commit directly to the main branch.

[02:54:32] - [02:54:36]

Is it the main branch? Oh, sorry guys, really, really sorry.

[02:54:36] - [02:54:51]

I need to be working on branch one for the final time. I hope I've given you brief enough introduction to GitHub. We are working in branch one. We go to index.html. We'll make a basic change, like

[02:54:51] - [02:54:55]

pin win

[02:54:55] - [02:55:02]

And we'll go to commit changes, and we will make sure we are not committing directly to branch one branch. We are

[02:55:02] - [02:55:04]

making a pull request.

[02:55:04] - [02:55:19]

Okay? Since... okay, someone has said pro should be in capital. Thank you so much for your inputs. Here you go. We are committing. Now understand what's happening. Branch 1 is owned by an employee

[02:55:19] - [02:55:34]

If anything goes wrong in branch one, nobody cares. Our main website is not impacted. You can have hundreds of branches being worked on by hundreds of people, but merging into the main branch is something. So right now I can commit directly to branch one branch

[02:55:34] - [02:55:48]

Okay, if I was working on the mean, I could have clicked this button and I would have created another branch. This is as simple. I am committing it to branch one branch and I have committed the changes

[02:55:48] - [02:56:03]

It's done, it's FinWin Pro inside branch one. Now we'll go to pull requests. We'll go to pull requests. We have branch one had recent pushes 10 seconds ago. Like, someone from the team pushed something

[02:56:03] - [02:56:08]

To me, like, the team leader. Now, I have to see if I have to pull that or not. I have a request.

[02:56:08] - [02:56:15]

So compare and pull request, okay? Show me the pull request

[02:56:15] - [02:56:30]

These branches can be merged. Perfect. We have something. We have a change. This is the change. Finwin or FinWin Pro. Now I'll create a pull request. The pull request is created. It is not a committed, it is not accepted. It is just a request right now

[02:56:30] - [02:56:43]

It is just a request right now. And since, at the moment, this request will be activated, our Claude code will wake up. Oh, we got a new pull request. I need to review that app.

[02:56:43] - [02:56:59]

And it will see that since it is very safe, just changing the name does not mess up with anything else. You'll be able to see instantly we have Claude has commented looks good. This PR only changes the title text in index HTML, FinWin to FinWin pro a single line

[02:56:59] - [02:57:10]

Purely cosmetic edit with no touch to net worth math, fire, calculators, app, wiring, flowcharts, or any secret data exposure generated by Claude code. I can just merge this pull request, which means I can

[02:57:10] - [02:57:25]

commit to this change with the main branch, me being a team leader, I have this option to do so. This was done immediately. This was done within a second of pull request being created, and my Claude does not need to be open here

[02:57:25] - [02:57:31]

My Claude is working on the cloud with the GitHub. Anytime a change comes, it is working

[02:57:31] - [02:57:48]

Yes, the Claude routine is on and this routine actually did something. FinWin reviewer worked right now. Once merged, the code is changed in the main branch. Yes, right now, right now also it is not in the main branch. Right now it is in the branch one and I have the power to merge it to the main branch

[02:57:48] - [02:57:55]

Claude commented, Netlify also commented that, hey, your latest thing was not

[02:57:55] - [02:58:05]

deployed because it's not finally approved by the team leader, it's not committed. It's not committed in the main branch. You can do that, but it is not ready to do right now.

[02:58:05] - [02:58:08]

sorted. So should we just merge it? Are we aligned?

[02:58:08] - [02:58:13]

Was that sorted?

[02:58:13] - [02:58:19]

I need some enthusiasm, guys. We have been here for like almost three hours.

[02:58:19] - [02:58:26]

Even if you are doubtful in anything, let me know. But if not, just please respond with yes

[02:58:26] - [02:58:34]

Perfect! I'll just merge it, confirm merge

[02:58:34] - [02:58:35]

Let's see what happens.

[02:58:35] - [02:58:50]

Pull request successfully merged and closed. Now, this is sorted. I'll go back to the code. I'll see what my index HTML says. It says FinWin Pro. I'll go back to my website. This says FinWin. I'll refresh, and I hope

[02:58:50] - [02:58:53]

This gets sorted

[02:58:53] - [02:59:04]

Oh, this is the title we changed, not the on-screen title. Not the on-screen title. This is the main website name that we have changed, FinWin Pro. We did not change the on-screen title

[02:59:04] - [02:59:19]

But don't worry, we got the overall idea of what we had to do. I'll just quickly take you through everything that we did today, okay? Quickly take you through every single thing that we did today. We, first of all, went to Claude Chat. We explained that, hey bro, we

[02:59:19] - [02:59:34]

actually want to make a website. I don't know what do I want to make? But please, please tell me the most important factors. I call my best friend living all the way in the different corner of the world, and then it gave me five most important questions. Then it forced me to think on those questions

[02:59:34] - [02:59:43]

And then I reply to those questions. I replied to those questions, it gave me a full prompt that I can copy and paste

[02:59:43] - [02:59:59]

inside Claude design. I pasted that prompt inside Claude design, and we got a fully functional website. But there were some things that I did not like. I made some comments right here in the chat box. I used comment tool, I used edit tool to make sure everything works fine. I tried and tested everything

[02:59:59] - [03:00:10]

Perfect. Then I share this with Claude code. I went to more formats and apps. I went to Claude Code. I copied the prompt, I went back to my Claude's desktop app

[03:00:10] - [03:00:28]

I went to, Claude Code session, which was this. This session of Claude Code, I pasted the exact prompt given by Claude design. This was the prompt. And after that, I said, hey, this was my design. I have an idea of a finance tracker

[03:00:28] - [03:00:48]

And please just go and build the stuff for me. What do I mean by build the stuff for me? Because design is just working on something which looks good on the front. It does not have a solid base. And to have that solid base, Claude Code actually went on to make index.html

[03:00:48] - [03:01:03]

readme.markdown, styles.css, some scripts like convert design and serve, some JavaScript like app, calc, and view, a lot of stuff. I don't understand 90% of it, but all I know is this, all these files are making my website to live

[03:01:03] - [03:01:20]

And now, since I have this, I went to GitHub. I went to GitHub, I created a new repository, which I own, I uploaded the entire code base onto that repository, and then I went to Netlify to actually publish that repository

[03:01:20] - [03:01:23]

To the web for every single one

[03:01:23] - [03:01:37]

Can we check the mobile version also? Yes, definitely you can. Here is the link. Just go and check the mobile version as well. And then we understood two different things, which is Claude schedule task and Claude

[03:01:37] - [03:01:41]

Routines. Schedule task is about

[03:01:41] - [03:01:50]

Claude Kovac majorly, which runs on a specific day, date, or time, and Claude routine simply functions on a trigger event. That can be anything at all, which we just

[03:01:50] - [03:02:20]

experimented with. And on top of that, we also tried using Claude Covark. Claude Covark can go access any file folder in your system, take out the mess, read the folders, understand the context, and make something out of them. We can go one step further

[03:02:20] - [03:02:23]

folders of rent, utilities, service, repair, software, supplier

[03:02:23] - [03:02:29]

Just go read through all these invoices and give me a brief chart.

[03:02:29] - [03:02:49]

This is what we can do. We have 6 more minutes, I guess we'll be able to take this beta chat new chat cowork. We have the folder connected. I need a no, this is not the right folder.

[03:02:49] - [03:02:56]

I'll just go KC Account Stump, clean version, and invoices

[03:02:56] - [03:02:58]

open.

[03:02:58] - [03:02:59]

Allow.

[03:02:59] - [03:03:18]

I just say, hey, you can see my folder which has a lot of invoices in multiple subfolders. Just go through all of them and give me some visual representation of the data right here in the chat. What do you actually see and understand from those invoices? Give me pie charts, graphs, histograms, anything

[03:03:18] - [03:03:35]

It will keep on working on that folder. So that was it. That's what we learned in the past three hours. I hope it was fun. And if you were overwhelmed, congratulations, because this thing deserves this thing deserved making you feel overwhelmed

[03:03:35] - [03:03:43]

We are waiting for this final one. We are waiting for this final visual representation. I hope I was able to add some value and

[03:03:43] - [03:03:50]

That's it. That's it. That's thank you so much. If you have any more doubts, clean basic doubts we can take for the next five minutes

[03:03:50] - [03:03:58]

Just don't spam. Thank you so much for all the validation in the chat section that I'm a good teacher.

[03:03:58] - [03:04:13]

Can you show a routine example? The way we actually went ahead to say to Claude that, hey, whenever you see a change inside my GitHub repository, whenever you see a pull request, make sure

[03:04:13] - [03:04:29]

You leave your comment on if that is safe enough to move forward or not. That is an example of routine. That routine does not work on 13th of every month or every Monday. That works every single time someone pulls a request. Someone from my team adds a change

[03:04:29] - [03:04:47]

That's exactly the function of a Claude routine, okay? Now, in, like, just 1 minute and 15 seconds, we have this. Look at this. All the bills, August builds 342K, paid from bank 333K, still owed \$121K, including September rent.

[03:04:47] - [03:04:57]

Money in Bank is 142K. Where the money went, this is the pie chart with all the visual representations, and every vendor rank. These are all our vendors with the name

[03:04:57] - [03:05:13]

Perfect. Bank balance throughout August. This is the bank balance you can see. All this was made accessing the files on your computer. You did not have to go drag and drop each and every file into your chat on the browser. You were able to do all of

[03:05:13] - [03:05:26]

From the data available on your computer. This has all the context, this has all the graphs. Now you can just add any other file to the same folder, and it'll update. That's how clean, easy, simple, fun this is.

[03:05:26] - [03:05:30]

That's it. That's it from my side.

[03:05:30] - [03:05:32]

Over to you, Shasti

[03:05:32] - [03:05:36]

Or if you have any specific questions

[03:05:36] - [03:05:46]

Yeah, thank you so much, Vishwa. I think the chat and the reactions on our screen just says that how well the session went for all of us. How was it, folks?

[03:05:46] - [03:05:56]

How comfortable are we now with everything that is in the Claude ecosystem, which is co-work, skills, schedule, routine, and Claude Code?

[03:05:56] - [03:06:11]

There is also a poll that is launched in front of you, you can see it on your Zoom screens. Go ahead and let us know how this session went for you as well. In the meantime, Vishwas, if you want to share your socials in the chat, that would help. A lot of them are asking for it.

[03:06:11] - [03:06:13]

Sure, sure, sure, sure.

[03:06:13] - [03:06:20]

Yeah.

[03:06:20] - [03:06:41]

With that, also, folks, today you got introduced to Claude Code, and you saw how you can go ahead and build products using Claude Code on the Claude desktop, but as part of your bonus session, which is on Monday, you will get introduced to something called Terminal, and you will connect your Claude Code to Terminal and build products from Terminal as well.

[03:06:41] - [03:06:52]

So, try to attend the bonus sessions live if possible. I do know that you might have other commitments, so try to make it live. If not, you will have the recordings.

[03:06:52] - [03:07:05]

Yes, we will get to the break. All the questions about the break, we will take a quick 5 minutes break, after that, Uttapa will be here, and he will give you a walkthrough of the entire hackathon process.

[03:07:05] - [03:07:12]

With that, thank you so much, Vishwas. It was great having you here, and I'll let you go and get some good amount of rest. We'll see you soon.

[03:07:12] - [03:07:14]

Thank you so very much.

[03:07:14] - [03:07:16]

Yeah.

[03:07:16] - [03:07:41]

And the questions about the workbook. Yes, as I mentioned, because we are starting with our hackathon today, we will not have a hands-on inside the breakout rooms. We will still create the breakout rooms, but the objective of the breakout rooms will be for you guys to get started with hackathon and talk to your team members, get off with brainstorming and everything about Hackathon, not workbook specific as such

[03:07:41] - [03:07:54]

But we have provided the workbooks for you guys. Let me quickly share my screen and showcase on where you can find those workbooks

[03:07:54] - [03:08:06]

Give me a second...

[03:08:06] - [03:08:13]

I hope my screen is visible

[03:08:13] - [03:08:15]

Yes.

[03:08:15] - [03:08:30]

So, just go to your resources and recording section, doesn't matter if it is EST or IST, and scroll all the way down to day 11 of your program, because today is day 11, right? And then just click on resources of day 11

[03:08:30] - [03:08:38]

You will see these two workbooks, which are named as additional workbook. Now, if you open it

[03:08:38] - [03:08:44]

Yes, so this is the same exact workflow that we just did

[03:08:44] - [03:09:01]

We just built a finance tracker using Claude Code and deployed it on Netlify. You can go ahead, and if you are somebody who has the paid version of Claude, again, as I mentioned, this can only be done if you have a paid version of Claude. So if you are somebody who already have access to the paid version of Claude, you already have the workbook.

[03:09:01] - [03:09:16]

Go ahead, it also has the prompts and exact step-by-step process on how you can go and build one for yourself. You can try this as well. And if you open the second workbook that is there in the resources section, you also have a workbook that is designed on Claude Routine.

[03:09:16] - [03:09:33]

Now, if you got introduced to how Claude schedule and Claude routine works. So we have given you a simple workbook which basically does the same job what Vishwas made it to, which is

basically getting the latest updates on your email. So this particular workbook does the same thing. So go ahead

[03:09:33] - [03:09:40]

try it after the session is done, or whenever you have time. But for now, in the breakout rooms, we'll focus on hackathon.

[03:09:40] - [03:09:45]

Are we clear, folks, all the questions about the workbooks?

[03:09:45] - [03:09:53]

Resources for yesterday's session is uploaded on LMS. team, we can also check once if it's not done.

[03:09:53] - [03:10:23]

Yes, with that said, we'll quickly take a 5-minute break, and then come back, and then we'll get... we'll get started with the hackathon process.

[03:10:26] - [03:15:23]

[Break music played; lyrics not transcribed.]

[03:15:23] - [03:15:34]

Okay, everyone, I'll be guys back from the break.

[03:15:34] - [03:15:35]

Yes?

[03:15:35] - [03:15:41]

Perfect. With that, we also have Putthapa on the call, so let's give him a very, very warm welcome, and

[03:15:41] - [03:15:44]

Welcome

[03:15:44] - [03:15:57]

He will take over the next couple of minutes to give you a quick walkthrough on what exactly is Hackathon and everything that you need to know about hackathon. So with that, Uttapa, welcome back and over to you.

[03:15:57] - [03:16:02]

Alright, thank you. Thank you, Shasti. Hey, everyone. Hope you're all doing well

[03:16:02] - [03:16:10]

We've almost done it, we have got 3 more days... 3 more days to finish our sprint

[03:16:10] - [03:16:16]

A quick check if I'm audible, visible

[03:16:16] - [03:16:18]

Alright, wonderful.

[03:16:18] - [03:16:29]

I'm gonna quickly set up my screen and make it quick so that you guys can get started with your breakout rooms. Give me a second.

[03:16:29] - [03:16:45]

In the meantime, if you have any questions around Hackathon, just wait for another 10 minutes, I'll get to all of those questions, and also all answer all of your queries that you might have around the hackathon. We have put some slides which can

[03:16:45] - [03:16:53]

Basically, anticipate the kind of questions that you're... you might have of these hackathon, and then also

[03:16:53] - [03:17:09]

That should be self-explanatory once I'm done with it. So what I'm going to do is, in the next 10-15 minutes, firstly, I'm going to address everything about Hackathon, give you the entire walkthrough of

[03:17:09] - [03:17:14]

What hackathon is like, how do you access and all of those stuff, right?

[03:17:14] - [03:17:22]

I'm going to pause the chat for a while, folks. I told you I'll answer all the questions. Just give me a couple of minutes.

[03:17:22] - [03:17:27]

Okay, I'll come... I'll get your questions, don't worry, I'll get to all those questions. But for now

[03:17:27] - [03:17:32]

Let me not be distracted and complete

[03:17:32] - [03:17:34]

what we wanted to.

[03:17:34] - [03:17:35]

Cool.

[03:17:35] - [03:17:45]

So I'll first explain about Hackathon, and then also tell you what is your next 3 days going to look like

[03:17:45] - [03:18:01]

Right? So there's a lot of activity that's going to happen, you're going to do your hackathon, you're going to have your sessions. Along with that, there are a couple of value-added additions that you will be getting access to in the next three days. A lot of information about how the cohort went through

[03:18:01] - [03:18:11]

access to your alumni community, how do you get it? All of those stuff, we have planned it. I'll probably take around 10-15 minutes, cover all of them, and then let you go to your breakout rooms

[03:18:11] - [03:18:18]

Cool, let's get started.

[03:18:18] - [03:18:22]

I think I pause the chat. My bad.

[03:18:22] - [03:18:24]

Are we good? Can we get started?

[03:18:24] - [03:18:29]

And I would need your attention for those, 10 minutes.

[03:18:29] - [03:18:47]

And if I have, I mean, in between these sections, I'll keep opening the chat just to ask just to answer any questions that you might have on hackathon. That way both of us can be focused.

[03:18:47] - [03:18:49]

Okay, let me pause the chat

[03:18:49] - [03:18:54]

I'll come back, open it up once I have

[03:18:54] - [03:19:01]

Once I'm ready to take up your questions.

[03:19:01] - [03:19:04]

Is my screen visible?

[03:19:04] - [03:19:05]

Cool.

[03:19:05] - [03:19:14]

So what is this hackathon all about? Before even you asking me, is it mandatory to attend? Because that is generally the first question that comes from the learners.

[03:19:14] - [03:19:21]

If you ask me point blank, is it mandatory to attend, it is not mandatory to attend. But should you attend, 100%, yes.

[03:19:21] - [03:19:26]

The reason is simple, folks. You have spent, what, around 12 days so far already

[03:19:26] - [03:19:33]

Sorry, 11 days, my bad. You've spent around 11 days already, right? There's a lot of skills that you've accumulated

[03:19:33] - [03:19:41]

A lot of you also told me that you did not get enough time to implement those skills or test those skills. So this is your testing ground.

[03:19:41] - [03:19:52]

Right? We are definitely going to put you in an uncomfortable position for the next 48 hours, where we give you a very short, limited time, put you into groups of people

[03:19:52] - [03:20:00]

Whom you have never met in the past, you might not even know which time zone each of you are under right now, which country each of you are under right now

[03:20:00] - [03:20:15]

But that's the fun of it. You get to learn from each other's expertise, somebody from marketing, somebody from maybe from a tech background, somebody maybe HR background. So collectively put together, you learn from each other's experience in the last 11 days

[03:20:15] - [03:20:31]

Their experience overall up to this point, but most important, you will see how an idea of yours can come to life with the help of AI in just a matter of 48 hours, a skill that would have taken otherwise maybe a decade to kind of master

[03:20:31] - [03:20:43]

I don't think... do you guys... can you imagine you going back to learning how to code and build these products, and then getting to start creating a product

[03:20:43] - [03:20:49]

Don't you think it would have almost taken you a decade to get to that point?

[03:20:49] - [03:20:52]

Yeah. So what AI is doing right now is kind of

[03:20:52] - [03:21:07]

helping you let go of the learning curve, and I'm not going to lie that your technical friends might still have an advantage in the space of AI, because they understand what goes behind all of these products, and how do you basically talk to the AI agents and the LLMs

[03:21:07] - [03:21:23]

The way a tech person would that always is an advantage, but it is not a only qualifier at this point of time, where it is not going to stop you from creating your dreams at this point of time, right? So that's the magic of these 48 hours.

[03:21:23] - [03:21:30]

And the reason I'm bringing this up is if anybody has a question, it can be 2 ways, right? One

[03:21:30] - [03:21:34]

I am not confident if I will be able to,

[03:21:34] - [03:21:45]

go ahead and contribute to the team, because the rest of them feels prepared compared to me. You might have that question. Should I even go ahead and put in my time there and be a problem there?

[03:21:45] - [03:21:48]

Or you might be wondering

[03:21:48] - [03:22:03]

Is there something that I can skip right now? Maybe I'll just watch the sessions and recordings and do the workbooks. Is it something I skip right now? In both the cases, I would say, please attend these 48 hours, because I have seen time and again in the last few

[03:22:03] - [03:22:05]

cohorts that we have run

[03:22:05] - [03:22:12]

This is one of the single most experience that learners would want to go back to because this is the practicality that you are all talking about.

[03:22:12] - [03:22:24]

applying your skill set to some vague idea that we provide you, and making... see how that whole idea comes to life with the help of AI, not just building it, but shipping it.

[03:22:24] - [03:22:40]

That is a game changer for yourself, folks. So, and moreover, this is a learning experience. You have come here for learning. It's not a competition that you need to look at, right? You should look at it from a learning perspective. If you don't have it, let's say you don't know, you have not from a product building background right now

[03:22:40] - [03:22:44]

And you do not have confidence enough to go ahead and start building a product on your own. Just watch how

[03:22:44] - [03:22:49]

The team is putting things together, and that itself is a good learning for you.

[03:22:49] - [03:22:55]

Or the other way around, let's say, if you're a team of 4 or 5 people in your group right now, and

[03:22:55] - [03:23:13]

I would recommend those of few who are comfortable with using these AI tools, and you're comfortable with building your product, make space for people who might not have the same confidence as you, because at the end of the day, we're all trying to learn collaboratively here, right? We're all trying to learn from each other. That should be the only

[03:23:13] - [03:23:18]

objective until day 14.

[03:23:18] - [03:23:29]

Do I make sense? This is to just clear out any questions you have before we get started. Is it mandatory to attend? No. But should you attend 100% only from a learning perspective?

[03:23:29] - [03:23:35]

You will probably never do this again.

[03:23:35] - [03:23:55]

Loan with the loaners, yes. How can I participate on hackathon without paying for AI tools? You don't have to. You already know there are so many free tools that are existing out there. It is up to you if you want paid tools, but there is Google AI Studio, there is Lovable, you have those limited credits. If there are 10 people in the group, each of you have a Lovable account which can run with the 5 credits, right? You know how to use GitHub right now for free

[03:23:55] - [03:24:07]

You can share your code bases. Each of you can work with one feature of your own. Bolt gives a generous 10,000 free credits available out there. So if you want to build, there are options out there, folks

[03:24:07] - [03:24:10]

It's just that you need to put that effort

[03:24:10] - [03:24:15]

Cool. I'm gonna pause the chat again and get started and not take any more time.

[03:24:15] - [03:24:20]

First thing, we have listed on a couple of questions that we feel

[03:24:20] - [03:24:29]

is, are the questions that learners might have. So I'm going to address it first, and then come to any other additional questions that you have.

[03:24:29] - [03:24:32]

What is a hackathon all about? This hackathon is a 48-hour sprint

[03:24:32] - [03:24:53]

You'll be working in a team. I'm stressing on the team part because it is a group activity, it is not an individual activity. Unless, unfortunately, you are the only active person in the group, nobody else is active or nobody else has joined the group, which is beyond our control at this

point of time. We divide the groups and share these invites to everyone so that they can come and join it

[03:24:53] - [03:25:09]

But beyond that, if someone is not going to be part of these channels, then I would say if you're the only person left, go ahead and build it on your own. But until unless that is the case, everybody, it is a group activity that you need to build together as a team and submit one product from the team.

[03:25:09] - [03:25:15]

You cannot submit, like, I cannot submit an individual product, and just you cannot submit a group project together.

[03:25:15] - [03:25:20]

We both will have to work together and submit one product, which we will consider.

[03:25:20] - [03:25:32]

So that is the hackathon is more of building a minimum viable product in a span of 48 hours. When I say minimum viable product, a software website or

[03:25:32] - [03:25:37]

a tool that you've built which actually works with

[03:25:37] - [03:25:45]

bare minimum features that is required for the... for it to function, for others to test it

[03:25:45] - [03:25:56]

So, how should we build and how? As I said, we are not giving you... we are not putting any restrictions on what kind of tools you want to use. If you can use Claude

[03:25:56] - [03:26:07]

codecs, or Lovable, Bold, or any other free versions of the tools that you want, go ahead and use it. There is no such limitation as such, front and back-end, you can use any of them, any agents you can use.

[03:26:07] - [03:26:24]

And when it comes to ideas, it has to be picked from the ideas that we provide you. I'll show you later where you get these ideas and what are the ideas that you should pick from. We will be giving you a list of ideas and your product should be one of those ideas itself

[03:26:24] - [03:26:39]

Only then, we can go ahead and qualify the product for the hackathon process. Otherwise, that product will be disqualified. It also gives everyone a common ground to be evaluated upon and also easier for mentors to kind of look into products from a similar context.

[03:26:39] - [03:26:46]

If you have your own idea, you can try it out after the program is done, but for these 48 hours, we will give you those ideas.

[03:26:46] - [03:27:01]

And I'm sure majority of you are not from a product building background, so you might not know what are the steps, exact steps, despite though you have gone through the vibe coding session. Some of you might feel it difficult on what is the right approach to go through

[03:27:01] - [03:27:08]

building a product. There are multiple approaches, but we have attached a product building playbook

[03:27:08] - [03:27:11]

I'll show you again how you can access this for now

[03:27:11] - [03:27:28]

Don't worry how to access this playbook. I'll show you where to access that, but all I'm telling you is, we are going to give you this playbook, which has step-by-step breakdown of how you can go ahead, take an idea, and build an MVP out of it, and also ship it. So this entire document

[03:27:28] - [03:27:49]

covers 3 phases, which includes all of those. To make it much more easier, we have also added an example use case here for a travel itinerary by applying the same playbook that you can go ahead and make use of and see how an example can be put into that playbook. Similarly, you can basically replace that idea with your own idea and then go ahead, build it

[03:27:49] - [03:27:52]

Cool. So this is

[03:27:52] - [03:27:56]

The initial instructions. Now

[03:27:56] - [03:27:59]

Is this clear so far up to this point?

[03:27:59] - [03:28:08]

And in the meantime, team, we can also drop the... or I'll drop it in the chat

[03:28:08] - [03:28:13]

I hope up to this point is clear.

[03:28:13] - [03:28:15]

Cool.

[03:28:15] - [03:28:31]

Now, how do you find your teams? I guess both Shasti and Sumedha has given you a good brief yesterday about how do you go about finding your teams. At the beginning of the call, I saw a lot of email IDs that was posted wherein you guys mentioned that you are

[03:28:31] - [03:28:33]

access is not

[03:28:33] - [03:28:39]

I mean, your email editor doesn't have access. We did check it. You have access, you just have to go back

[03:28:39] - [03:28:41]

Check with the same email ID on the product

[03:28:41] - [03:28:48]

Okay? If you're still stuck, if you're still not sure, please wait till the end of this call. We will help you out.

[03:28:48] - [03:28:53]

I'll tell you how you can... how we can help you out getting added to these channels.

[03:28:53] - [03:28:57]

So

[03:28:57] - [03:29:02]

How to find the teams? Yes, I'll quickly do that, not in detail. WhatsApp, yes

[03:29:02] - [03:29:11]

So how do you find your teams? It is simple. Or how do you find your group? You just have to open this tool. I've shared the link in the chat.

[03:29:11] - [03:29:14]

Right? This is also provided yesterday to you.

[03:29:14] - [03:29:16]

So you open this tool

[03:29:16] - [03:29:32]

Put in your email ID, your registered email ID, folks. You have to use your registered email ID that is with Outskill. I'm gonna just give an example of my own email ID. I hope that is added, yes. Now, please don't join this group. It is a dummy group. Don't join this group

[03:29:32] - [03:29:47]

That I'm showing you here. So, if you're part of the group, it'll show your group number and a QR code. You can either scan this QR code or open this WhatsApp group link that you have here. Just open this and join the WhatsApp. This is how you join your WhatsApp group

[03:29:47] - [03:29:55]

What you should remember is this number, because today in the breakout room, you will join based on this number.

[03:29:55] - [03:30:04]

Okay? I'll explain this when the breakout room starts, but remember this number, because today you will choose your breakout room, and you will choose a room which

[03:30:04] - [03:30:09]

Has a number same as this. Not 78, but your respective

[03:30:09] - [03:30:18]

WhatsApp group, when you put your email ID here. In case it doesn't show up, for example, let's say, in case your email ID doesn't show up

[03:30:18] - [03:30:21]

Or it says no access

[03:30:21] - [03:30:34]

You'll get a screen like this. Simply fill this form. Raise a request, simply fill this form, wait for 10 minutes, our team is working in the back end, who can help you out with that?

[03:30:34] - [03:30:54]

Okay, I'm just repeating this part again. Anyways, we had done it yesterday, but still in the interest of everyone, I'm just sharing it again. If someone is still not able to figure it out, then you'll have to wait until we open the breakout rooms, where we can help you out on how to get there.

[03:30:54] - [03:31:00]

Is the... is this part clear? Okay, people are joining. Great

[03:31:00] - [03:31:03]

Now, let's move on.

[03:31:03] - [03:31:06]

Now, when and where do we submit?

[03:31:06] - [03:31:14]

This is where we will go back to this tool. Now, first thing I want everyone's acknowledgement here in the chat is

[03:31:14] - [03:31:22]

Do you all have the URL for this particular product? I'm again putting it in the chat. Open this product

[03:31:22] - [03:31:32]

Okay, I'm putting it again, I'm gonna wait for one minute, so that all of you acknowledge that you know this is a hackathon, portal where you can get your team and also

[03:31:32] - [03:31:36]

a lot more resources that I'll talk about right now.

[03:31:36] - [03:31:46]

Okay, everybody's giving an acknowledgement, so I'm not going to go back explaining what this tool is. So, you know how to find your team here

[03:31:46] - [03:31:48]

There is 3 sections on the top

[03:31:48] - [03:32:01]

Find a group, hackathon info, and submit project. Click on hackathon info. This is where you will get your vibe coding playbook. I'm going from the bottom. You'll get your vibe coding playbook, which is the same thing that I showed you here

[03:32:01] - [03:32:11]

The product building playbook, you'll get it here. Okay, just open it. It'll take you to that second thing. What are the ideas that you need to make use of

[03:32:11] - [03:32:22]

Click on this particular option product ideas. It'll open up a list of ideas that you can choose from. It has to be one of these ideas, folks.

[03:32:22] - [03:32:24]

Personal health

[03:32:24] - [03:32:42]

Personal finance, collaborative note-taker, like your granola kind of stuff, task management app, like your Asana and other applications, AI interior makeover resume to interview coach, pet care companion and campaign planner. Any of these tools

[03:32:42] - [03:32:49]

IDS is something that you will have to build upon, not anything beyond this.

[03:32:49] - [03:32:53]

Okay? And the question about

[03:32:53] - [03:32:57]

How to submit and where to submit.

[03:32:57] - [03:33:07]

First of all, once your hackathon is done, you will have to submit your entry in the form of a deck. So click on this pitch deck template

[03:33:07] - [03:33:19]

make a copy of this, or the team will share a downloadable file on your LMS as well, under Hackathon section, you can just go through the resources and recordings, you'll find it.

[03:33:19] - [03:33:26]

So just file, click on download, or you just make a copy of it

[03:33:26] - [03:33:29]

make the entire presentation, make a copy of it.

[03:33:29] - [03:33:31]

You will be able to

[03:33:31] - [03:33:44]

The reason I'm asking you to make copies, too, so that you can edit it. So, once you are here, edit all these details, your product idea, the team members, what are they doing, what do they do, and how do they help the product

[03:33:44] - [03:33:54]

What is a problem statement that you're trying to solve? Very, very important. What is a problem statement that you're trying to solve? A couple of supporting pointers that might help

[03:33:54] - [03:33:57]

us evaluated better

[03:33:57] - [03:34:12]

Add a screenshot, or, like, a hero page, or the main feature, or the home page of your product, add a screenshot of that, and also record a five minute video using any tool out there. It can

[03:34:12] - [03:34:23]

For example, we have given a tool called Loom. If you want to find the link to access that in this playbook that we have provided you, just scroll down to the bottom

[03:34:23] - [03:34:39]

Let me drop that in the chat as well. This is a tool. It'll allow you 5 minutes of free recording or you can use any other platform like Zoom or anything that you want to record with, but make sure it is of five minutes only, not more than that.

[03:34:39] - [03:34:50]

So, team details, problem statement, screenshot of your product, and a video recording, a Loom video recording is something that you'll do for 5 minutes. Create this deck

[03:34:50] - [03:34:53]

This is the first step. You create a deck

[03:34:53] - [03:35:02]

Because this is how you're telling us what you're trying to build. And then to submit, there is a third button here called a submit project. You click on it

[03:35:02] - [03:35:13]

You have the timer running in, the deadline for you to submit your product. This timer will keep running in so that you don't have to ask us when is the deadline to submit the project. You already have the timer for you.

[03:35:13] - [03:35:17]

2 days, 11 hours, exactly from now.

[03:35:17] - [03:35:20]

Okay? So you go here, put in your group number

[03:35:20] - [03:35:34]

add one of you, one of you from the team should take the initiative of being the team leader, who will orchestrate things like a master agent who will orchestrate that. The team has also given you a template here that you can make use of

[03:35:34] - [03:35:44]

Okay, the same, same template. Put in your group number, one person who's taking the ownership for the team, put in your name, for example, let's say it is Shashti Group 7

[03:35:44] - [03:35:49]

And then, add your members, the other members that were part of

[03:35:49] - [03:35:58]

the hackathon, add their names, full names here. It is necessary for us for the certificate as well, in case you win the hackathon. Put it up here

[03:35:58] - [03:36:04]

And then add your phone number, and continue.

[03:36:04] - [03:36:08]

Just adding a random number

[03:36:08] - [03:36:13]

Once you submit, go to the next step, choose which app

[03:36:13] - [03:36:19]

building, enter the name of the product, a brief description

[03:36:19] - [03:36:24]

And all the other details that it has been asking here, just mention that.

[03:36:24] - [03:36:30]

I'm just going to randomly just go ahead and put something. Now you don't have to go ahead and put all these things.

[03:36:30] - [03:36:36]

I mean, don't mention NA in your submissions. It is necessary for us to evaluate what product you're building

[03:36:36] - [03:36:50]

Now, once you complete these two steps, entering your team details, entering what your product is all about, put in the URL that we can access your product. Let's say the website link that we can access the URL.

[03:36:50] - [03:37:00]

My WhatsApp is buzzing constantly, folks. I think you guys are already started interacting the WhatsApp group, not paying attention here. Just give me a couple of minutes here, right?

[03:37:00] - [03:37:04]

Put in the URL of your product here

[03:37:04] - [03:37:11]

And let's say, if it can be accessed by anyone now that I can go ahead and create my own account on your product

[03:37:11] - [03:37:24]

Choose open access, or let's say you want us to use a... let's say you've created a demo account, and you want us to use the same demo account and log in through that for

[03:37:24] - [03:37:31]

the view of how the product works, then choose specific login. Then you have to give us the login ID and password that we should use

[03:37:31] - [03:37:36]

Okay? And then you put your loom video link and the final deck link.

[03:37:36] - [03:37:41]

I know there are a couple of steps, but is this clear? Basically, follow the instructions.

[03:37:41] - [03:37:43]

You put the team

[03:37:43] - [03:37:45]

Team details

[03:37:45] - [03:37:58]

Update the product information, and then this is where you give us links and access. You put the URL of your product, you choose open access or specific login, depending upon however you have designed the product, and then

[03:37:58] - [03:38:14]

Loom video... Loom video, YouTube video, whatever you want to do, but keep it for 5 minutes only, not more than that. And then the deck, the final deck that you have created, the template that I was talking about, attach that here.

[03:38:14] - [03:38:18]

When is the last time to submit? It is running here

[03:38:18] - [03:38:31]

I'll come to the deadline date again, but you have your timer here. I don't want to confuse the time zones here, but you have two days, 11 hours.

[03:38:31] - [03:38:39]

How do you go to this interface? Again, this is why I said don't interact in the WhatsApp group. See my screen for a couple of minutes.

[03:38:39] - [03:38:45]

I'm going to share the tool in the chat in this tool, go to submit project section, the third section

[03:38:45] - [03:38:56]

On the top.

[03:38:56] - [03:39:00]

Okay

[03:39:00] - [03:39:17]

Yeah, real pleasure, the time we're running down. Now, I'll tell you, I've seen a couple of questions around to extend the timeline, because we have sessions on Saturday and Sunday as well. Ideally, folks, this is a 48-hour window, right? It will start the minute we end the session today, that is 11.59 PM Indian Standard Time

[03:39:17] - [03:39:29]

Today, which is exactly in one hour from now, exactly one hour from now, is where your hackathon starts. And ideally, you're supposed to submit it in exactly 48 hours, that would be Saturday

[03:39:29] - [03:39:46]

11.59 PM Indian Standard Time. But because we are taking that additional time from you in terms of the sessions on Friday and Saturday, that is how the time has been extended to Sunday, that is 27th of September, 10am Indian Standard Time. You can either take a screenshot of this

[03:39:46] - [03:39:52]

Or did this go to this product that is available here, and follow this timer

[03:39:52] - [03:39:56]

So that way, there is no confusion on time zones.

[03:39:56] - [03:40:11]

Is the submission process clear? I'm gonna check one last time, and let's... I know I'm a little behind, so I'm gonna quickly move to other things.

[03:40:11] - [03:40:15]

URL, yes, but not able to register. You don't have to register.

[03:40:15] - [03:40:18]

This is not a platform to register right now

[03:40:18] - [03:40:28]

You will have to first know which group you're part of. Once you know that, when the breakout room starts, join the particular room number

[03:40:28] - [03:40:35]

When you're done with building your product and you want to submit it as a group, that is when you need to use this section

[03:40:35] - [03:40:42]

Once you... we open that up, you can go ahead and start putting the details

[03:40:42] - [03:40:44]

Okay.

[03:40:44] - [03:40:52]

Majority are saying yes, so I'm going to move forward again, folks. Where can we find the product ideas and the playbook?

[03:40:52] - [03:41:05]

Folks, if we keep going back to the same conversation that we have covered in the last 30 minutes, we will not move forward. But still, everything is available here. You just have to click a couple of buttons. So click on hackathon info

[03:41:05] - [03:41:17]

You have these three sections. The playbook is here, the ideas is here, and the pitch deck template is here. And the submission window, submission button is available here.

[03:41:17] - [03:41:30]

Jay, you don't have to fill it today. Today, you're gonna start discussing about what you want to build and how do you proceed forward. And then you will after 48 hours, once you've finished your bill, that is when you need to submit.

[03:41:30] - [03:41:34]

Okay, Steam, people are asking me to move forward, I'll move forward.

[03:41:34] - [03:41:40]

This is everything about the hackathon, folks. Just going back, you know, the submission deadline.

[03:41:40] - [03:41:56]

The timer has already started. We have given you 10 hours of bonus time so that it can compensate for the sessions that we are going to run on Saturdays and so Friday and Saturday, so that you don't miss out the session at the same time, finish your product as well

[03:41:56] - [03:42:12]

Okay, so 48 hours plus 10 hours is what we have provided you as a buffer. So how are projects evaluated? Projects are evaluated based on these 4 things. Understanding of the problem, how functional is your application, the creative angle that you bring into the solutions of the product.

[03:42:12] - [03:42:28]

And also, the presentation, how aesthetic your interface is, how well you have conveyed your storytelling in the deck or in the video. So we'll look into all of these things. So take a screenshot of this, and this is going to be your evaluation metrics, and it's going to be equal to

[03:42:28] - [03:42:30]

weightage for all

[03:42:30] - [03:42:48]

But remember, while it is a competition, it is also a learning journey, so focus on all the learnings that you get as part of this journey. So what do the winners get? Winners get a certificate, winners get a product showcase opportunity on day 14, that is a graduation day, so that you can showcase your product as a team

[03:42:48] - [03:43:05]

To the rest of the audience, we'll have top 3 winners part of this particular hackathon, and each of you will get 10 minutes on the graduation day so that you can come ahead on the call, showcase your product and how it works with the rest of the community. What's more interesting, so we are building this

[03:43:05] - [03:43:10]

Let me just show that right now.

[03:43:10] - [03:43:26]

So we are building on our website on Outskill. We are doing a couple of changes and revamping things, but as part of that, we will create an alumni section, an outskill alumni section where we put up all those outcomes and the stories and the products that learners have built and shipped

[03:43:26] - [03:43:42]

So you will get an opportunity to be evaluated. We generally go through verification process to identify if we're having the right people on the page, the products that are working or the shipped. So you will be eligible for

[03:43:42] - [03:43:51]

that as well, wherein we will evaluate your products, your profiles, and go ahead and list it on our outskill community page as well.

[03:43:51] - [03:44:02]

So graduation day is where you submit, sorry, we announce the winners of this hackathon on graduation day, we will announce the top three winners. So it's going to happen

[03:44:02] - [03:44:15]

Sunday, 7.30 PM Indian Standard Time, which is a normal time you join our main sessions. It'll run for about 1.5 hours. That is where you'll have your demo sessions, where 10 minutes each winning team. You'll come ahead and showcase your product

[03:44:15] - [03:44:18]

Okay? This is a timeline

[03:44:18] - [03:44:33]

you start building today, you'll Friday and Saturday completely utilize it to build and publish your product. Submit it by 10 a.m. Indian Standard Time on Sunday morning, and then on the graduation day

[03:44:33] - [03:44:38]

We will have the demos and winners.

[03:44:38] - [03:44:50]

Is this clear so far? If this is clear, I'll take 5 more minutes, where I will tell you what the next 3 days, along with the sessions, what other things are we going to cover, and then we can get started off with the breakout rooms.

[03:44:50] - [03:45:00]

I will need exactly 10 minutes, folks. Are we... are we good?

[03:45:00] - [03:45:02]

Okay, I will need

[03:45:02] - [03:45:05]

To

[03:45:05] - [03:45:22]

High pushing deadline by 10 minutes. Folks, I'm... I've given you 10 hours

[03:45:22] - [03:45:34]

I'm gonna share that screen, just give me a second.

[03:45:34] - [03:45:49]

Alright.

[03:45:49] - [03:45:53]

Is my team... Tim, is my screen visible?

[03:45:53] - [03:45:59]

Okay

[03:45:59] - [03:46:03]

Geeta, I've spent 45 minutes explaining

[03:46:03] - [03:46:05]

have to

[03:46:05] - [03:46:20]

join or find your groups, and how do you go about doing this hackathon? So, I think I'm already a bit slow, so probably recordings is something that you might have to rewatch and see if you have missed on something.

[03:46:20] - [03:46:35]

Okay, quickly telling you what the next 3 days looks like, right? So today, you know, after this... after my section in the next 5 minutes, you'll be put into breakout rooms, and then you will get started with identifying each... sorry, basically introducing each other and also

[03:46:35] - [03:46:38]

Going ahead and

[03:46:38] - [03:46:53]

Identifying what product you want to build as part of this hackathon as a group, you'll do that. Unfortunately, if you're the only active person, I would say go ahead and continue building it on your own, because last minute, we will not be able to make any changes into the operations at this point of time. I hope that case is very limited at this point of time

[03:46:53] - [03:46:56]

But anyways

[03:46:56] - [03:47:06]

So tomorrow, what are we covering and day after, and so the next 3 days, the couple of things that we are going to cover is something that I want to explain here. So tomorrow

[03:47:06] - [03:47:22]

That is, Friday, 25th of September. We're gonna have a dedicated session on monetization, which is going to be part of a normal 2.5 hours that we do. Apart from that, once we're done with the session, we are also going to introduce you into the most important

[03:47:22] - [03:47:28]

Part of the your whole program that you have signed up for is the access

[03:47:28] - [03:47:44]

to a community of 10,000 plus AI journalists. AI generalists and AI builders at this point of time, which we have accumulated over the couple of last months. So all of these active community, how do you get access to it? How do you leverage it? What are the platforms that

[03:47:44] - [03:48:03]

You can get access to a network. Generally, you keep asking about how can you go about finding a person from my country in marketing or a domain, or a product domain, and start interacting and networking with them. So, we're also going to introduce you to a product that we have created, which will help you go ahead and network with

[03:48:03] - [03:48:22]

Each of you, based on your interest and based on what your objectives are. So all of this is something that we will introduce you to you tomorrow. The entire alumni space as well as alumni opportunities that exist for you. And also we will be talking about an alumni onboarding call. So on Saturday

[03:48:22] - [03:48:30]

When we connect. Of course, the first part of the day is going to be about you knowing how to build your own AI Jarvis, which is in the form of OpenClaw and Hermes

[03:48:30] - [03:48:50]

But what you'll also know after that session is done is you'll get a exclusive link where you can like exactly how we were able to onboard with us, talking to one of our point of contacts one to one that is similarly how we want you to end your journey as well. So once you complete your program, so we will give you a link on Saturday

[03:48:50] - [03:49:09]

Wherein you will be able to book an appointment with the team, the practitioner's team, and the AI programs team at Outskill, like me, Shasti, Sumed, and all of those will be available

there, taking up these calls. The entire team at Outskill will be part of these one-to-one calls to know what your experience is, if there's any feedback, if there's any open-ended questions that you have

[03:49:09] - [03:49:21]

that might help you give derive a closure for your entire journey? That is something we will drop a link where you can go ahead and book these appointments with us over the next week on

[03:49:21] - [03:49:25]

Saturday. So if you're in the call, you will... you'll be able to go ahead and book it.

[03:49:25] - [03:49:31]

Okay? We'll also talk about what are your next steps, because

[03:49:31] - [03:49:46]

It's not just the end of the journey at the end of 14 days, there's a lot of other things that we have planned for you, even beyond these 14 days. What does it look like? How do you go about making use of them, including the roadmap that Vaiba was talking about? We're going to give you all of that information

[03:49:46] - [03:49:49]

on

[03:49:49] - [03:49:51]

Saturday.

[03:49:51] - [03:49:52]

Cool.

[03:49:52] - [03:50:03]

And then Sunday, as you know, we will have our graduation. We will have a session by the leap on how do you pick a particular problem statement that in your own

[03:50:03] - [03:50:22]

daily life at this point of time, and then go ahead, identify the opportunities and the way you can apply AI to it. That is going to be part of the first half of the session. Then, we're going to introduce the hackathon winners. You're going to come do the demos. You also get to share one-to-one with us on the call, be able to share your stories as well with us.

[03:50:22] - [03:50:25]

And finally, graduate from the cohort

[03:50:25] - [03:50:26]

So

[03:50:26] - [03:50:38]

Is this clear? Does this look interesting the next 3 days?

[03:50:38] - [03:50:46]

What part of this is interesting to you? I see most of you saying it is interesting, so which part interests you more folks?

[03:50:46] - [03:50:47]

Chaotic

[03:50:47] - [03:50:58]

Okay, you have a screenshot here, just take the screenshot, this might help you out.

[03:50:58] - [03:51:14]

So overall, these three days probably is going to be the most busiest days for you in these 14 days, which is not just in terms of what you do, but also in terms of the things that you get access to, like those sessions

[03:51:14] - [03:51:31]

Like, those alumni spaces, how do you go about leveraging it? Your one to one alumni calls that you can book with us so that we can talk to you, understand your next steps, and see how we can help you out. And also

[03:51:31] - [03:51:34]

get access to the next steps that we have planned for you.

[03:52:50] - [03:52:58]

Cool. Now, with that, I think, enough of talking from my end

[03:52:58] - [03:53:04]

What we will do right now is open up the breakout rooms. There are two sets of people here.

[03:53:04] - [03:53:10]

One set of people already know which room you're part of.

[03:53:10] - [03:53:21]

Can I get me in the chat if you already know which room you're part of? Only people who know the room number that they're part of.

[03:53:21] - [03:53:25]

Great. Let me pick an example.

[03:53:25] - [03:53:42]

G5. Pawan says Pawan is from G5. So, what you're supposed to do, Pawan, or anybody else, when your breakout rooms open, today you will have an option to choose your own breakout room, so at the bottom of your screen, either you will see a breakout room icon available, or just click on the more option

[03:53:42] - [03:53:48]

There should be a more icon at the bottom of your screen. Click on that. You will see an option called as Breakout Rooms

[03:53:48] - [03:54:03]

Click on that breakout room, choose the room, which is the same as the room number, the WhatsApp group number that you are part of. So Pawan, if it is part of WhatsApp group number is G5, then Pawan will join the breakout room number 5.

[03:54:03] - [03:54:14]

Okay? So, once we open up the breakout rooms, all of you who know your room numbers, please go ahead, join those rooms, and then get started off with the formalities.

[03:54:14] - [03:54:22]

What you do is introduce yourself, switch on your cameras, talk to each other, introduce yourself. Tim will also give you access to share the screen as well.

[03:54:22] - [03:54:26]

And you start picking up one problem statement that we will close

[03:54:26] - [03:54:32]

So we will end the room today by 12 AM, that is... 45 minutes is what we will provide you for this discussion.

[03:54:32] - [03:54:51]

After that, we will end this call and you can carry the discussion back into your WhatsApp groups, you can share your own Zoom links after the session is done, and then continue your

discussion. The second set of people do not know which group you're part of, though we have already given you a lot of instructions around it. If you do not know which group you're part of

[03:54:51] - [03:54:53]

Then

[03:54:53] - [03:55:08]

Use the Q&A box. The Q&A box is going to be opened up. Use the Q&A box, put your question there. The email ID or whatever details that you want. Our team is actively looking into the Q&A boxes, and they'll help you sort your issue out.

[03:55:08] - [03:55:20]

In that space of 5-10 minutes, you will have to have a bit of patience, because I still do not have ATNs deployed on this call to get to all those

[03:55:20] - [03:55:28]

issues at the same time, so there is first in first out that will come out. So you'll have to give us that kind of a time

[03:55:28] - [03:55:30]

Cool. Now

[03:55:30] - [03:55:34]

team, if you're ready, let's get started off with the breakout rooms

[03:55:34] - [03:55:46]

All of you who do not know which room you still belong to, you can stay back in the main room, drop your question in the Q&A box, and we will help you out and move you to those rooms.

[03:55:46] - [03:55:59]

Shamim, yes, we can build that, but I think you deserve a personal attention at this point of time, at least here in this call.

[03:55:59] - [03:56:15]

Okay, Mahesh, if you're in room number 11, you can join the breakout room number 11. I'll tell you when the rooms are open. I'll tell you when the rooms are open, folks.

[03:56:15] - [03:56:18]

Cool. Team says rooms are open.

[03:56:18] - [03:56:22]

You can go ahead, start joining those rooms

[03:56:22] - [03:56:27]

Whoever do not know your room numbers, please put it up in

[03:56:27] - [03:56:30]

the Q&A box.

[03:56:30] - [03:56:47]

Imran, we will not respond in the chat. Please put it in the Q&A box, as I mentioned

[03:56:47] - [03:56:53]

We have taken down your feedback, Imran. If there's scope in the upcoming sessions, we'll do that.

[03:56:53] - [03:57:09]

Today you will not get a pop-up. Anybody who's waiting for a pop-up, you will not get it today, because you choose your own breakout rooms, so you will have to go at the bottom of your screen, find... you'll have a button called Breakout Rooms at the bottom of your screen, or you'll see something called as more

[03:57:09] - [03:57:11]

Click on that

[03:57:11] - [03:57:16]

Click on the more icon, and then you will see the breakout room option.

[03:57:16] - [03:57:22]

And once you click on the breakout room option, you will see a list of rooms. Choose the room that you belong to.

[03:57:22] - [03:57:28]

Clara, can you please drop your query in the Q&A box?

[03:57:28] - [03:57:58]

It's difficult for us to solve the issues over the chat, folks, so that's why I'm asking you to put it in the Q&A box. The team is going to look into it and move you to those rooms, but you will have to give us 10 min because we're going through all of them manually.

[03:58:10] - [03:58:20]

Okay. My team says, one, you're not dropping your email ID in the Q&A box. So request is, whoever is saying that you have a... you're not sure which group you're part of.

[03:58:20] - [03:58:32]

Please drop your email ID in the Q&A box, otherwise we will not be able to identify you. And most of you who are dropping it. You already have access to the WhatsApp group. You just have to find your WhatsApp group number

[03:58:32] - [03:58:40]

Which... let me reshare the link for the tool again.

[03:58:40] - [03:58:48]

Most of you are dropping the questions. So your email IDs, you already have access. So I'm going to drop the tool link again.

[03:58:48] - [03:58:51]

I'm gonna help you out

[03:58:51] - [03:58:55]

On how to find your respective group again

[03:58:55] - [03:59:08]

Just watch my screen if you're not clear

[03:59:08] - [03:59:20]

Okay? This is the tool that I've dropped in the chat. When you have the section called as Find Your Group, that is where the homepage is, it'll automatically take you here, you don't have to do anything. Just type in your email ID in this section.

[03:59:20] - [03:59:27]

Your registered email ID. Whatever you have been putting it in the chat, put it here. I'm gonna use a dummy email ID here

[03:59:27] - [03:59:33]

This is my email ID. You will have to put your email ID, click on Find Group

[03:59:33] - [03:59:40]

And then it'll automatically show you a group number. Now, this is not your group. This is my group.

[03:59:40] - [03:59:52]

But you will see a group that you belong to here. The group number, the QR code, and also open WhatsApp group button here. I'll click on this

[03:59:52] - [03:59:59]

This is how my group will show up. I can directly go ahead and join this particular group

[03:59:59] - [04:00:03]

If not, joining a group right now, at least go ahead.

[04:00:03] - [04:00:14]

join the breakout room so that you can get started with the discussion.

[04:00:14] - [04:00:19]

Should we stick to ideas only that are listed in the project ideas? Yes, you have to stick to it.

[04:00:19] - [04:00:31]

You cannot pick another idea, because that is the evaluation metrics that we have at this point of time. You can build your own idea after, I mean, beyond the scope of the session.

[04:00:31] - [04:00:37]

Rohan, if you know your WhatsApp group number, then you would have to

[04:00:37] - [04:00:40]

drop

[04:00:40] - [04:00:50]

I mean, you have to join that particular room number.

[04:00:50] - [04:00:54]

Okay, since you already know I've moved you to the right room.

[04:00:54] - [04:00:57]

Jeff

[04:00:57] - [04:01:04]

Can I know which is your email in the Q&A box?

[04:01:04] - [04:01:12]

How will I know the room numbers?

[04:01:12] - [04:01:19]

Okay. I would want to address people who are asking me this question right now for a minute, listen to me, okay?

[04:01:19] - [04:01:27]

Where is the link for the breakout rooms? I told you, you will have to look at the bottom of your Zoom screen. There will be a button called as

[04:01:27] - [04:01:33]

Breakout rooms are an option called as breakout rooms, an icon, or click on the more option

[04:01:33] - [04:01:40]

You will be able to see breakout rooms. One of these two will work for you. Click on that, and then you will see a list of rooms that you should join.

[04:01:40] - [04:01:46]

In that, join the room which has the same number as your

[04:01:46] - [04:01:50]

WhatsApp group

[04:01:50] - [04:02:01]

Okay? And others who are asking me to show the product again, the first thing that I want you to do is click on the link that I'm gonna put in the chat

[04:02:01] - [04:02:08]

In the email ID section, drop your email ID and search. Click on the search button, or find your group button. It'll give you a number.

[04:02:08] - [04:02:26]

Let me know once you've done this.

[04:02:26] - [04:02:33]

Danil, are you... are you aware of your room number?

[04:02:33] - [04:02:36]

Daniel Jagger.

[04:02:36] - [04:02:42]

Nazir, the room is open, you can go ahead, use a breakout room option

[04:02:42] - [04:02:47]

Vicki, you can wait for a couple of minutes, since people are joining.

[04:02:47] - [04:03:17]

Unfortunately, if you're the only one left, and I would have to say you can go ahead and start building your product. You can choose your own idea and start building your... I mean, you can choose the idea from the list that we have provided and start building it if you're okay building it alone.

[04:03:23] - [04:03:27]

Clara, I hope you got your room number. If not

[04:03:27] - [04:03:29]

I'm moving you there.

[04:03:29] - [04:03:40]

It's room 10, I'm moving you there.

[04:03:40] - [04:03:55]

Okay, looks like almost everyone is sorted when it comes to the rooms. Is there anyone here who's still stuck?

[04:03:55] - [04:04:16]

Is there anyone here still figuring out how to join these breakout rooms, your room numbers, etc.

[04:04:16] - [04:04:31]

And have you please, shared your email ID in the Q&A box?

[04:04:31] - [04:04:34]

If you guys know your room numbers, put it in the chat

[04:04:34] - [04:04:38]

I will get you moved there

[04:04:38] - [04:04:46]

Nazir, do you know your room number?

[04:04:46] - [04:04:54]

Alright.

[04:04:54] - [04:04:57]

Yeah, I've moved you. Nazir, I've moved you.

[04:04:57] - [04:05:27]

Jagannath, I have moved you, you should be getting a pop-up which you can join.

[04:07:20] - [04:07:50]

Alright, last call out, do you guys have anybody here who's still kind of figuring this out?

[04:09:43] - [04:09:51]

Yeah, Gayatri, can you help me out with the breakout room number?

[04:09:51] - [04:09:53]

Yeah, it's the same hackathon group

[04:09:53] - [04:10:23]

You just have to join the same breakout room number, which is same as your hackathon group number.

[04:40:39] - [04:40:48]

Hey everyone, I hope, we didn't cut you off in between, but if you needed more time, don't worry, you can continue this discussion back in your

[04:40:48] - [04:40:54]

breakout... sorry, in your WhatsApp groups, and we did pull you back because I told you you're gonna get 45 minutes.

[04:40:54] - [04:41:10]

Right. So we are done with that. You can carry forward this conversation on your WhatsApp groups. You can create your own Google Meet links and Zoom links and share it across and continue the discussion there. Mashud says we want 45 hours

[04:41:10] - [04:41:18]

I mean, you have to plan sooner and start getting to building stuff, otherwise by the end of

[04:41:18] - [04:41:20]

40 days, I don't

[04:41:20] - [04:41:26]

I don't think you'll be able to build it in time if you take so much of time to plan, right? Anyways

[04:41:26] - [04:41:43]

Folks, I'm sorry if I cut you off in between, but we will end the session right now. You can carry forward the discussion on your WhatsApp group. One of you can maybe share your own Google Meet link or Zoom link, and then try to continue the discussion there. You have the next two days to build this up

[04:41:43] - [04:41:59]

We have given you that additional buffer time for you to go ahead, to compensate for the sessions that you're gonna have tomorrow and day after. I wish you all the luck. Just a reminder, tomorrow we will have a session, same time as today. Your bonus office hours will be there, your main session on monetization is going to be there

[04:41:59] - [04:42:09]

But after that is done, we will talk about the Outskill alumni community that you get access to and how you can leverage it to the best of

[04:42:09] - [04:42:13]

the ability. So, we'll do that tomorrow, for now. Thank you.

[04:42:13] - [04:42:21]

And we'll see you tomorrow.
