

Pre-Reads

14-Day AI Accelerator Program

Pre-Reads XI

Session Name: Claude Mastery: From Everyday Work to Automated Workflows

Table of Contents

Chapter 1: What You Will Learn

- 1.1 Introduction to the Claude Ecosystem
- 1.2 Tools Covered in the Session

Chapter 2: Prerequisites

- 2.1 Tools You Will Use in This Session
- 2.2 Basic Knowledge and Familiarity

Chapter 3: Key Takeaways Before the Session

- 3.1 What to Expect in the Session
- 3.2 Summary Checklist

Chapter 1: What You Will Learn

1.1 Introduction to the Claude Ecosystem

In this session, you will learn the **Claude ecosystem** and use it end to end. You will take 1 idea, a **personal finance tracker**, from a brief to a **public website**. You will also delegate a work task and set up 2 recurring workflows. No coding experience is needed.

You will learn **4 parts** of Claude and when to use each one:

Chat

- Use it for discussion, explanation, and brainstorming.
- Use it to clarify what you actually want to build.

Design

- Use it when the **visual interface**, layout, and prototype are the focus.
- You will turn the finance-tracker brief into a working prototype.

Code

- Use it to work with a codebase: implementation, debugging, testing, and shipping.
- You will build, test, and prepare the tracker for publishing.

Cowork

- Use it for delegated, multi-step work with documents, files, analysis, and connected tools.
- You will hand over a receipts task while the build runs.

Ways to Repeat Work

- **Scheduled Task:** A Cowork task that runs again on a set schedule.
- **Routine:** A saved automation setup in Claude Code that runs at a set time.

- **Dispatch:** Assigning work remotely from your phone. We will explain it only. There is no live demo.

Treat these as **starting choices**, not hard limits. Chat can also create files and artifacts. Cowork can produce code-backed outputs. Pick by the work and the workspace you need.

1.2 Tools Covered in This Session

You will work with these tools:

- **Claude Chat:** To shape the brief and the clarifying questions.
 - **Claude Design:** To build and refine the prototype.
 - **Claude Code:** To implement, test, and prepare the project.
 - **Claude Cowork:** To delegate the expense task and run it on a schedule.
 - **Skills:** Reusable instructions and resources. You will apply 1 expense-reporting skill, not build one.
 - **GitHub:** Where the project code is stored.
 - **Netlify:** Where the project goes live as a **public website**.
-

Chapter 2: Prerequisites

2.1 Tools You Will Use in This Session

You can follow **hands-on** or just watch and build later. A little **familiarity** with the tools below is enough.

1. Claude

What it is: 1 account with 4 ways to work: **Chat**, **Design**, **Code**, and **Cowork**.

What to Do Before the Session:

1. Log into your Claude account.
 2. Find where **Chat**, **Design**, **Code**, and **Cowork** sit in the interface.
 3. For hands-on, check that your access includes Design, Code, and Cowork.
-

2. GitHub

What it is: The place where the project code is stored and shared.

What to Do Before the Session:

1. Know that the finished project is pushed to a **repository** there.
 2. For hands-on, keep a GitHub account ready and signed in.
-

3. Netlify

What it is: The service that takes the GitHub repository and puts the site online.

What to Do Before the Session:

1. Know that it connects to GitHub and gives you a **public URL**.
 2. For hands-on, keep a Netlify account ready and signed in.
-

4. Scheduled Tasks and Routines

What it is: The 2 ways to make work repeat. We will set up 1 of each.

What to Do Before the Session:

1. Read about [Scheduled Tasks in Cowork](#).
2. Read about [Routines in Claude Code](#).

2.2 Basic Knowledge and Familiarity

- **No coding experience required:** You will work in plain English and review the output.
 - **Basic prompting:** You have covered this already. It will help you shape the brief in Chat.
 - **Skills:** You have covered skills already. In this session, we will **apply** a skill, not create one.
 - **Dummy data only:** The finance tracker uses sample figures. Do not put real financial details into it.
-

Chapter 3: Key Takeaways Before the Session

3.1 What to Expect in the Session

- **Tool choice:** Learn which Claude mode fits which job.
- **Build:** Shape the brief in Chat, prototype in Design, then implement and test in Code.
- **Delegate:** Hand a folder of receipts to Cowork and apply an expense-reporting skill.
- **Automate:** Set up 1 Cowork Scheduled Task and 1 daily AI-news Routine.
- **Publish:** Push the project to GitHub and deploy it on Netlify as a public URL.
- **Format:** 180 minutes, with a 10-minute break and 10 minutes for recap and questions.

3.2 Summary Checklist

- **Log in** to Claude and find Chat, Design, Code, and Cowork.
- **Keep ready** your GitHub and Netlify accounts if you plan to follow hands-on.

- **Revise** the basics of prompting and skills from the earlier sessions.
- **Think of 1 task** from your own work that has clear inputs and a reviewable output.
- Be ready to build the **Richie Rich finance tracker** and take it live.
