

AIAP C14 Day 5	
Question	Answer
Hi tEam, yesterday's oPNE api KEY DINT WORK FOR ME YESTERDAY. Could you please help?	The keys have an expiry of few hours, past the session. Pls switch to using openrouter.ai free models or you can create a gemini key (has access to some free credits) using https://aistudio.google.com/app/u/0/api-keys
Please confirm timings for Saturday & Smday as my LMS is showing different EDT timings with go on till 3am in the night.	Are you in the EST batch od the IST batch?
I need to attend Day time Sessions.	
Office Hours also cover current day's workbook or only previous day's?	kalpana, it covers q&a session
How can we get help for the Additional Workbook from Day 5?	Today is day 5.
Would it be possible to generate the post session reading material in simple text format rather than the claude generated format? Would be better if the fancy boxes, fond and colors are avoided.	
I was stuck on a section and I could not figure it out.	could you pls explain what section and which day, workbook, etc
Team, the concept of RAG should be atleast 2 or 3 sessions as it can do a lot of things	Some aspects will be taken in coming sessions as well
How did Jitish build yesterdays breakout material? It was fantastic! Plez send description of how he built it jeffrey@vettedintentent.com	He vibe coded it with claude and hosted it on vercel - you can do the same using loveable
This training is very exhaustive. Give a gap of 1 day in between so that we can digest what you are learning. You guys are going like a train without any speed break.	Pls do go over the session recordings few times offline, as the quantum of content is more to be covered in the short span
I received calendar invites for IST for the weekend. I'm in EDT.	
For non techies, Practice sessions back to back with Theory is overwhelming... if spaced out on consecutive days, learnings can be better as there will be enough time to learn/study and practice for longer duration with the Co-Mentors... please think through on this suggestion towards implementation aqap...	Partha, this is an intense course where we're working towards making you a real AI generalist in two weeks. Besides attending clases and breakout rooms, you'd need to practic on your own too. You do this, and you'll end up being at the top of AI knowledge and understanding among your peers.
How can we get help for the Additional Workbook from Day 4?	Reach out on #Ask-Doubts channel on LMS
i thought it was dileep	
What about our regular session for the next 2 days (7.30 PM IST) ?	The weekend has full day sessions on both days.
May I ask a stupid question-How do I retrieve notes from the zoom note taking tool?	Hi, you can use the zoom ai in the top right its a purple/blue button with starts
which tool, will i need for the weekend lesson especially for my workbook without disruptions, if i will require a paid tool please advise as you will know better - thanks	
I am stuck at number #3 and crating the customer support field for the output.	and this is related to a workbook from previous days? I would suggest pls post your query on LMS, #Ask-Doubts channel
Quick question before we get to the memory section — I'm already using Claude's native persistent memory (not a third-party MCP). It's storing structured files about my businesses, preferences, and working context that carry across every session automatically. How does this compare to what we're building with Mem0 today? Is Mem0 solving a different problem, or is it redundant for someone already on Claude's built-in memory system	Mozelle, Claude's memory can be powerful, but that memory is added to every single prompt you send as an input prompt to Claude. It can reduce how much you can do with Claude over time, as more of it is used by sending the entire memory every time you prompt. Systems like Mem0 allow Claude to search context efficiently and only add relevant parts of the memory to your prompts. So they can be very efficient. Another benefit is the Claude can get very targeted memories, so the chances it misunderstands or hallucinates becomes very low.
Did we have a mentor switch for day 5? Is Dileep still expected to join us today?	
What's the difference between MCP vs AI Agent - can you clarify?	MCP is the connection layer between the ai and external software - an ai agent is an ai that has memory and performs tasks
How is MCP & API different then	An API is a fixed set of instructions that lets traditional software systems request data from each other. Model Context Protocol acts as an adapter layer that allows an AI model to read those instructions, understand available actions, and choose when to use those capabilities on its own.
How is MCP different from APIs then?	An API is how any two pieces of software talk. MCP is a standard layer built on top, designed specifically for AI models. With raw APIs, you write custom integration code for every tool. With MCP, the model gets a universal plug. Build once, connect to anything that speaks MCP. Think of API as the road, MCP as the standard traffic system every AI can drive on. MCP doesn't replace APIs. It wraps them. Underneath, an MCP server still calls the tool's API. What MCP adds is a common format so the model can discover, understand, and use those APIs without custom code each time. API does the work. MCP makes it AI-ready.
How are MCP different from API's and MCP	An API is how any two pieces of software talk. MCP is a standard layer built on top, designed specifically for AI models. With raw APIs, you write custom integration code for every tool. With MCP, the model gets a universal plug. Build once, connect to anything that speaks MCP. Think of API as the road, MCP as the standard traffic system every AI can drive on. MCP doesn't replace APIs. It wraps them. Underneath, an MCP server still calls the tool's API. What MCP adds is a common format so the model can discover, understand, and use those APIs without custom code each time. API does the work. MCP makes it AI-ready.
This does not answer my question. Please be open for feedback otherwise there is no point of sharing feedback with outskill	The suggested approach from Outskill w.r.t handling the content and understanding it was what was clarified. If you have specific concerns, pls reach out on Ask-Doubts channel or Support channel.
can you pls reply to message	

in 14 day sprint there need to be agap of 2 days. Take it or leave it. we are human beings not machines	Feedback noted, team will be reviewing this as a standard practice.
do mcp keep an open connection?	not 24/7 no - but it has refresh tokens etc just like a normal api - the connection wont expire
Does it not make the MCP & API same?	An API is a specific rulebook that humans write to connect two systems together. The Model Context Protocol gives an AI model a standardized way to read those rulebooks and choose the right actions on its own.
Explain again the difference between API and MCP?	An API is a specific rulebook that humans write to connect two systems together. The Model Context Protocol gives an AI model a standardized way to read those rulebooks and choose the right actions on its own.
could you please add a reosrce how to generate api key to complete the extra workbook for yesterday	
is MCP same as API..just different is communication between two API	An API is a specific rulebook that humans write to connect two systems together. The Model Context Protocol gives an AI model a standardized way to read those rulebooks and choose the right actions on its own.
Sam, could you kindly give me the source to find all the questions and answers from Wednesday's early session	Hi Ade, I am not aware of the lms. Uthappa/Shasti are the right people to answer this :)
So API is a single functionality and MCP is Grouped Functionality?	An API is a specific rulebook that humans write to connect two systems together. The Model Context Protocol gives an AI model a standardized way to read those rulebooks and choose the right actions on its own.
got the answer	
Full form of MCP.Can you explain in between API and MCP.Where we will use API and where we use MCP	MCP stands for Model Context Protocol. Use a standard connection when linking two fixed software programs together, and use MCP when an AI assistant needs to automatically discover, read, and operate external tools on its own.
The token usage on Claude while accessing MCP is huge! how would one optimise it?	You should disable the tools you don't use, and disconnect the MCPs and connectors you don't use.
Can we have any reference link that explain MCP (similar to RAG reference yesterday shared) so that we can get and knowledge on MCP	You can learn about MCP directly through the official documentation at modelcontextprotocol.io or explore the open-source community hub at github.com/modelcontextprotocol . Anthropic also provides an introductory overview on their website explaining how the protocol works.
10	
even if you are using only the Higgsfield MCP within 2-3 rounds the tokens get exhausted	
What is the web ID? I need to log in on a different device	
Do I need Higgsfield credits for Claude to create MCP tools interaction	yes
9	
can we create mcp to connect with clude on my system?	yes
is the higgsfield tool a plugging?	Not a plugin, rather a connector(MCP)
plugging	
is MCP secure if I want to connect my bank accounts?	MCP is the means, while the provider(bank or fintech or retail, etc) need to implement this first. If this vendor/provider can be trusted to have this implemented securely, then you could use that MCP
why did claude ask permission to generate video but not image?	It generally asks the first time if you select "Allow always" on the permission and Akshat may have already approved image generation.
Do you have to specify higgsfield in the promot to use MCP?	its a best practice but it could technically figure it out itself
Can we Use N8N MCP using claude and automate using claude?	yes
Can we automate generating images and videos with Higgsfield using an n8n workflow ?	Yes, absolutely! We can also use other image generation models directly inside n8n.

Super proud to share that I've just unlocked Day **3** in the AI Accelerator Challenge by Outskill! This isn't just a course, it's a 7-level, live and hands-on journey that's preparing 300+ professionals (including me!) to become AI Generalists - people who can apply AI across product, content, strategy, marketing, and real-world problem solving. I've made a commitment to: Learn in Public and document everything I'm discovering not just for myself, but to inspire others to start their AI journey too. Here are my key takeaways from Day **3:** **The use of N8N for automation** **Difference between LLM and AI Agent** **Creating a form via N8N** The learnings from this day have completely transformed my understanding of AI applications in real-world scenarios. I'll be sharing updates of my journey and what I achieve in these 7 Levels Follow my journey and feel free to DM if you are curious, let's grow together. What's one thing you're curious about when it comes to AI? Let's chat									
Can we say that MCP is a road between 2 cities for to anf fro, and APIs are vehicles on that road?	Yes, as a simple analogy, that works well: * MCP = the road connecting two cities, defining how communication can happen. * APIs = the vehicles traveling on that road, carrying requests and responses. * MCP tools/resources = the destinations/services you can access along the way. Small caveat: MCP is more specifically a protocol/standard for connecting AI applications with tools and data sources, not the physical communication network itself.								
Is it possible to use (Claude + MCP) to create some technology e.g. Salesforce CRM, SAP S4/Hana etc. based Technical Architect design document connecting to live tehcnical product website?	Yes, Claude using MCP can read live technical product websites and pull relevant details to draft a Technical Architect design document for platforms like Salesforce or SAP. It gathers information from the website and automatically structures it into a clear, professional design outline for you.								
Is that real Japanese language in the background?	There is a good chance that it isn't. But there are ways to make this possible.								
how many credits did it use as an example for this?	That depends on he model used, and a lot of other configurations in Higgsfield.								
sorry dont know what tat is									
How should one be updated on the available tools out there and what to recommend, especially when cost is involved?	AI is your best advisor for ranking tools for a specific task - i like to ask it to tabulate various options with features prices etc								
which is the cheapest and best alternative for higgsfield.. balancing the quality of the output ..	Kling AI is the best and cheapest alternative to Higgsfield, offering high-quality realistic video motion at a lower starting price. Luma Dream Machine and Hailuo AI are also great options that offer generous free tiers to test cinematic quality for zero cost.								
Does claude always choose right model on Higsfield ?	Claude selects a default a default model based on the brief								
if the mcp is for like swiggy or zerodha then the tokens will be only for claude rt?	Depends on the mcps. Some are free. Some require credits of both								
Can we edit the video as well in the same window if we don't like the output?	If the tool has an editor, you can revise the video there; otherwise, adjust the prompt and regenerate, or export it to a video editor.								
I am in IST (India) Batch									
how do we know which MCP to choose for what purpose	Choose an MCP based on the system you want your AI to interact with and the actions you need. Simple formula: Use case → System → Required action → MCP Examples: * Manage GitHub code → GitHub MCP * Query a database → Database MCP * Work with files → Filesystem MCP * Search/browse the web → Web/Browser MCP * Manage Slack → Slack MCP So, don't choose MCP first. Start with "What do I want the AI to do?" Then find the MCP that exposes those tools/resources.								
how do we know which MCP to choose for what purpose	Based on your use case (what you're trying to do)								
Do we need to take a separate subscription for Higgsfield or once connected to claude, it will use claude tokens?	You would need a separate subscription for Higgsfield.								

I cant see add option in my Connectors field!! I am on plus plan and not free!!	do you have existing connectors? i believe theres a limit																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																														</
---	---	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	--	----

why downloading cant higgsfield do it directly	Here, the merging etc is being done by claude so the file needs to be accessible to claude desktop (mostly)
As Akshat is using both Claude and Chatgpt for various things.So what can kind of usecases works better with Claude and what works better for Chatgpt?	Tracy, they're both almost the same now in terms of capabilities.
Not directly related to todays session but is there a preference for a business choosing one claude over chat gpt or vice versa? This course has a Claude Mastery session next week - Why Claude rather than Chat GPT? Is this just preference, in which case why or is it grounded in platform ability?	It's preference but in certain industries e.g for software development Claude is preferred.
cowork should be able to access the local files, right?	yes
is he using desktop version for claude as well?	yes
Remind me, what did he use firecrawl for in the creation of this video?	to scrape nikes website to get their brand ci (fonts, colours etc)
can claude also add b-roll that is huge	With suitable video-editing tools connected, Claude can help place B-roll; provide footage you have permission to use and specify where each clip should appear.
Can chat gpt connect to claude & vice versa... trying to manage credits?	No they can't connect directly to each other
Is the scraper scraping a published style guide? Or can this be done for any company ie "create this in the style of x"?	A scraper reads the pages you give it; a published style guide is ideal, but website content and screenshots can also provide brand references, with inferred details checked manually.
yes	
so if it is a skill issue... then we should be able to design a skill that will allow claude to see all the videos and to add proper b-roll where needed?	correct yes
whats the difference between the chat and work tabs on chatgpt?	Chat is for answers. Work is for finished projects. Chat is your assistant. Quick questions, ideas, drafts, learning. You ask, it replies in the chat window. Work is agentic. You hand it a whole job and it works across multiple steps, sometimes for a while, then hands back a finished file. A real spreadsheet, a deck, a report, even a website. Not a draft you copy out.
For average quality and generic work Claude is good. But if one needs to be more creative and complex then we would need to do things independently in different tools, right?	More complex work benefits from clear creative direction, references, and iteration; use specialized editors when you need precise control, while letting the AI help with planning and repetitive steps.
Any recommendations of tools to create photos of a real person? Needs to look like the real person but in different situations. Any tips?	Use nano banana
In this session, we will develop own MCP or we will use the developed MCPs?	yes
10	
Thank you. I'm excited already as I have been postponing the task	awesome :)
One clip had the nike logo on it? Did I miss something	yes it did have the logo
as a freelancer we may need to use multiple ai tools and they cost much and do we have a session in this program where we will get to know how to bill a client? to cover the cost of the tools and also the work hours to be billed so it is profitable?	it depends on a case by case basis - the best way to determine is to send the brief to ai and ask it to give a costing with explanation
How do you manage your usage in cowork ? Or max sub does not concern it ?	Keep tasks focused, attach only relevant files, and avoid repeatedly rerunning the full workflow; check your account's current usage limits rather than assuming a higher plan is unlimited.
the challenge I have found with all this auto creation is editing. Not every frame, every color, every visual is to my satisfaction. So going by frame by frame, is the most time consuming task. How can one simplify it and not accept everything first time it has created.	Approve the storyboard and visual style first, then request changes by scene or timestamp while preserving approved sections; keep an editable project so small fixes do not require regenerating everything.
Explain again how to get the browser to open in Claude? I missed that step in his presentation.	in claude desktop use cowork and tell it to open the browser
Did you ask to add text in the add or did it do by itself?	it did it by itself
is it on the desktop app? will check it now	Yes, both are on the desktop apps.
how to connect tools to Claude which are not listed under claude	We will be learning this today.
in cowrk video can be generated with one time prompt	yes with higgsfield
sorry i didn't get you? Which part we will perform in this session?	
yes, it's there. thanks a lot	
because some charge the client for the ai tools they only bill the working hours that is why i am not sure which way to go?	Either model can work: have the client pay tool subscriptions directly, or include an agreed tool allowance in your fee with clear overage terms; price your work separately and make the costs transparent.
so claude is used as ai agent for our work (non repetative work). it itslef planne dthge workflow??	Exactly. That is the power of AI agents!
Team it showed Seedance to do the video, was there an automatic access given aside higgsfield ?	Higgsfield allows you to use multiple image and video generation models.
Can we do these with Deepseek?	Using a different model is only part of it: to reproduce the workflow with DeepSeek, you would also need compatible browser, file, and editing tools connected to it.
In chatgpt what is the difference between chatgpt and codex	chatgpt itself is a chat interface for natural language questions or tasks. Codex is specifically for writing code
What is MCP called in Claude?	Connector
so why didn't we lear this on day 1	
how to create long duration videos then ?	Break the script into scenes, create shorter clips with consistent visual references, then assemble them in a video editor with narration, transitions, and audio.

Has your team used FLOOT?					
If using Higgsfield do you have to have separate logins for all the tools it makes available, such as Kling, Seedance, etc?	No, Higgsfield works on the basis of credits, and uses different amounts of credits for create images, create videos, us differnt models, etc.				
Where is it on Claude?	the browser ? its built into claude desktop				
can this be used for stock market as i tell clause to set a algo , can it be used.	yes				
If the connectors are not there in the list in Claude, what do we do?	Check whether the service offers an official MCP server and whether your Claude account supports adding it; otherwise, use an API-based integration or import the relevant files manually.				
can you build your own mcp when one does not exist?	yes				
Funny statement made by Akshat as Salesforce is now development and design partner with Claude and they call it Claudeforce. Btw, I'm a Salesforce certified Architect.					
Is it in Cowork (paid version)?	yes				
Will there be a session on Figma + MCP to create UI UX design	He is discussing figma now :)				
What is the difference between a MCP and an API ?	An API lets software access a service's data or actions; MCP standardizes how AI applications discover and use tools and context, often through servers that call those APIs.				
what are the different kinds of mcp & where do we find these?	MCP servers can connect AI to files, databases, search, and business apps, and can run locally or remotely; look in the app's connector directory or the service provider's official documentation.				
i was able to automate 5 of my x responses just now. question is can i connect my instagram and linkedin account also	Check for an authorized integration for each platform and your account type; an X connection does not grant Instagram or LinkedIn access, and automated replies must meet each platform's rules.				
Can we create AI agents with MCPs?	sure - but depends what kind of agent and where				
whats a good mcp for maintaining finances, budgets, investment portfolio?	For tracking, start with a spreadsheet or finance app you already use and look for its official connector; prefer read-only access or statement imports for budget and portfolio summaries.				
whats a good mcp for maintaining finances, budgets, investment portfolio?	Zerodha and INDMoney have MCP servers which can help with this.				
Team apart from Higgsfield can you suggest similar AI tools equally good or better ? Maybe better allrounder than Higgsfield ?	openart or runway but higgsfield is the best				
Is the web browser function in GPT on the desktop version please?	Yes Rashid. You will have todownload the app.				
@ritesh					
x.com i was able to automate responses with desktop version of chatgpt can i do it with linkedin and instagram also	It depends on that browser tool's support and each platform's permissions; working on X does not guarantee the same on LinkedIn or Instagram, so check their automation rules and review replies before posting.				
I receive warning messages while using Firecrawl. Is it safe to use it?	Please share the exact warning with any keys or personal details removed; do not bypass it until we know whether it concerns permissions, a website restriction, or a security issue.				
How do we get the Tweets responses created to be consistent with your voice and points of view?	by creating a skill.md file in claude desktop				
HEY IS IT A MUST TO GET PAID VERSION OF CLAUDE TO DO THIS WORK?	no but it would be easier instead of waiting for credits to refresh				
Aside from claude or chatgpt, are there MCPs for people who prefer using local models?	Yes, MCP is not tied to a specific model provider; use an MCP-compatible client that supports your local model, with suitable tool-calling support, and connect the servers you need.				
currently i am using excel sheet					
What was the role of firecrawl?	to pull nikes brand ci and fonts etc from their website				
how to open the browser option in chat gpt desktop verision. not able to do. I have upgraded to work	You can open the built-in browser in the ChatGPT desktop app by clicking the browser icon on the toolbar or by pressing Cmd + Shift + B on macOS or Ctrl + Shift + B on Windows.				
got it harshit					
Iam vitally interested in the certs, so where to put the proof of the workbooks ?					
Is the built-in browser in Chatgpt only available for MacOS? Windows OS is not available yet.	it is available on windows - i have used it				
thanks					
I cna/t find the icon to open the browser?	You can open the built-in browser in the ChatGPT desktop app by clicking the browser icon on the toolbar or by pressing Cmd + Shift + B on macOS or Ctrl + Shift + B on Windows.				
yes					
how do you keep track of all the tools	Don't try to track every tool. That's a losing game. New ones ship daily. Track categories, not tools. You need a tool for each job: writing, image, video, voice, research, automation, data. Once you have one strong tool per category, you have a stack. That's enough. Then swap, don't add. When something clearly better comes out in a category you already cover, replace. You're not collecting tools, you're running a chain. The operator's edge isn't knowing 50 tools. It's knowing which 3 to run against one workflow. Depth of chain beats breadth of collection.				
harshit it is working in linkedin also insane					
How do I expose my own product's services with MCP?	You will learn how to create custom mcps today				
how many more ai tools should v get as paid version for better wokflow? n8n? higgsfield??	There is no fixed number of paid tools you need; start with one clear workflow, test what you already have, and add a subscription only when it solves a specific recurring need.				

[illegible]

just tried to create mcp/vercel mcp in chatgpt but it could not able to install it like a plugin, can you show in hands on now?	Vercel MCP is a Connector, not an installable plugin. In ChatGPT: Settings → Connectors → Advanced settings → enable Developer mode. Click Create connector → add https://mcp.vercel.com → choose OAuth → connect your Vercel account. In a new chat, turn on Developer mode and select the Vercel connector/tools. If you cannot see Create connector or Developer mode, your account/workspace does not currently have custom MCP access enabled
y	
mcp	
What do tools mean for MCP? How does it use them?	In MCP, a tool is one specific action the AI can take. "Search files." "Send email." "Read this table." "Generate image." One capability, one tool. An MCP server bundles a set of these tools and exposes them to the AI.
Overall, is it right to think of MCPs are AI-discoverable interfaces that aggregate relevant APIs from the respctive tools?	Yes Laxmi. That is a good way to think of it. What MCP does is convert APIs into tools by adding a description, input schema, etc on top. This allows AI to understand how to use the tool or in essence, call the unlying API correctly.
pls repeat the api step	
do they keep our shared data on their server or left on our computer memory ?? as it's major concern of our manager to allow use of AI	Cloud AI typically sends relevant input to a provider's servers; storage and retention depend on the service, plan, and settings, so a desktop app or local MCP server does not by itself keep everything on your computer.
open crawl	
why API why not direct connection?	That is because AI is not great at using APIs directly, as they require specific usage methods, and they are not discoverable. An MCP server makes all of them discoverable because an MCP sever broadcasts its tool list as soon as AI connects to it.
Do we need a paid Perplexity subscription in order to fetch the API?	no
Claude calling perplexity indirectly, right	This is happening inside n8n.
just tried to create mcp/vercel mcp in chatgpt but it could not able to install it like a plugin, can you show in hands on now?	
Is what he is showing now a way to connect Perplexity without creating your own API connection?	
does the perplexity api not require authentication?	It does. That is where the API key comes in.
why would you build an MCP if there are available for almost all tools?	Four reasons to build. One, internal systems. Your own database, your CRM, your custom software. No one ships an MCP for the tool only your company uses. You build it. Two, control. A public connector exposes what its maker decided. Build your own and you decide exactly what the AI can touch, read-only, specific tables, nothing else. Three, your workflow. Off-the-shelf tools do the common thing. Yours can do the exact chain your business runs, in one step instead of five. Four, glue. Sometimes the value isn't one tool, it's connecting three systems that don't talk to each other. You build the MCP that joins them.
I couldn't find the command. Can you please send the link?	
So, the MCP that we are building is the same as the Perplexity MCP out there? Is the only one way to make Perplexity MCP or there are multiple ways?	there are multiple ways
it mentions query GPT5.5... has to be changed to Claude if using Claude? If not, what does it mean?	This must be on Codex/Chatgpt
Never mind	
Team are API keys paid or free to use ?	Paid
You can build MCP server only if there is APIs of tool is available, right?	yes
So this is for tools / software that doesnt have an MCP but provides an API?	Exactly! This can be used to create an MCP for tools which have APIs but not an MCP server.
no need for nodejs to add as connector?	depends on how you connect it sometimes its required
Great thanks	
In this case we must have subscription for both Perplexity and n8n	n8n free trial is good and perplexityt api credits not subscription
Thanks for clarifying, Ritesh! As a part of this course, will we go through the process of converting existing APIs of a proprietary (say our own) product into an MCP server and connect with Claude?	Creating APIs for products which don't have them would be way too advanced for this course. We are learning how to convert an API into an MCP server right now!

[illegible]
