

Day 5 Office Hours Session

00:05 - 12:58

Audio shared by Sumedha: [Pre-session music played; lyrics not transcribed.]

13:39 - 13:52

Sumedha: Hello, everyone. Welcome back to your offices. Very warm, warm welcome to the session. Good morning, good evening, good afternoon from wherever you are joining in. How is everyone doing?

13:55 - 14:01

Sumedha: Yeah, the camera issue is fixed. I switched my laptop, so yeah.

14:05 - 14:23

Sumedha: Perfect. So, how are we doing today? How is the energy in the room? It's already day 5 right now, and how is the energy? Like, are we still on our high notes, or is the energy not so high, mid-high? Alright, wow, amazing.

14:25 - 14:28

Sumedha: Same note, okay. Hi, Josh.

14:32 - 14:33

Sumedha: Amazing.

14:35 - 14:54

Sumedha: Amazing. Great. So today's Day 5, we will deep dive. So, we already, for the last two days, have deep dived with, automations, and today's Day 5, we will be diving deep into advanced automation, advanced MCP and Codex.

14:54 - 15:11

Sumedha: So, I hope you guys are very excited for that, but before we do that, we have our Q&As. So first, we will be taking up all the questions that is left from yesterday and the day before, and then we will go ahead and take up the new questions.

15:11 - 15:20

Sumedha: The Slido is open for everyone to post their questions. We will take it up on the basis of popularity, so the higher popularity questions

15:20 - 15:39

Sumedha: gets picked up first, and the lower popularity question gets picked up later, okay? So the slider is open for everyone. I have shared the link in the chat. You can drop your questions there, and we have Harshith again with us for taking us through this amazing one-hour informative

15:39 - 15:46

Sumedha: session, right? So, welcome back, Harshith. Great to have you back, and I'll leave the session to you for the next one hour.

15:49 - 16:06

Harshith Vaddiparthi | Outskill: Yes, thank you, Sumedha, again, for the nice intro. And, yeah, I think time to get started, and let's look into all the quick Q&A. Of course, once again, it's all rated on the thumbs up, so if you find something more interesting, just, you know, go ahead and do the thumbs up and then come up, right? That's one.

16:06 - 16:14

Harshith Vaddiparthi | Outskill: But now, before we quickly, quickly start, I have something for you guys, alright? So, I really have something which I want to share.

16:14 - 16:32

Harshith Vaddiparthi | Outskill: Number one is, of course, we'll get into all the Q&A, and we'll try to cover as many as we can in the next one hour, guys. But do not worry if I will still not be able to, because I prepared, like, my entire own resource for this, and this is a resource, it's called AI Automation X5 Resources.

16:32 - 16:42

Harshith Vaddiparthi | Outskill: So, this link will be shared with all of you guys. Let me actually drop it in the chat right away itself, because it'll also be shared in the NMS too.

16:42 - 17:07

Harshith Vaddiparthi | Outskill: But this basically consists... so I've, you know, I've taken all the questions that you've all given a local OLAMA installation, NAPN templates, and also some other extra references and pointers which I wanted to add in as well. So, like, fire crawl scraping, installing Olama. You also have some templates which you can directly just go ahead and use. And let's say if you are building

17:07 - 17:09

Harshith Vaddiparthi | Outskill: this as, as an agency, right?

17:09 - 17:12

Harshith Vaddiparthi | Outskill: How do you approach client delivery?

17:12 - 17:36

Harshith Vaddiparthi | Outskill: I've given my very own playbook here, right? If you click on that, you have a complete client delivery. How do you create the antenn template? How do you build your automation? How do you hand it off to your client, right? So this is what it is. Once again, I'm actually updating this on, like, a weekly basis, so no matter, you know, even if the office hours is done, you can still go ahead, you know, you can still go ahead and

17:36 - 17:51

Harshith Vaddiparthi | Outskill: read all these resources, which is fully updated with the latest information, right? So, again, that's the point, right? I mean, what's the point of learning Wipe coding if I can't white code and go ahead and share with you something, right? So, here it is, so make sure you copy the link.

17:51 - 18:00

Harshith Vaddiparthi | Outskill: Or, once again, it'll also be shared in the LMS too, and all the questions that we're getting, I'll try to add as many resources as possible for you guys. Okay.

18:00 - 18:05

Harshith Vaddiparthi | Outskill: Now that we got that out of the way, let's get started with our very first question right now.

18:05 - 18:17

Harshith Vaddiparthi | Outskill: Okay, so I'm working on BFSI, banking, financial services, and insurance tech company. As a product manager, want to create a tool to connect with core solution

18:17 - 18:26

Harshith Vaddiparthi | Outskill: to create prompt-based reporting on AI Workspace. Which tools, process, to be used for this?

18:26 - 18:30

Harshith Vaddiparthi | Outskill: which tools and process to be used for this?

18:30 - 18:39

Harshith Vaddiparthi | Outskill: want to, do for, okay, a POC, you just want to create, like, an MVP or a MVP right now, right? So if you want to proceed with this, here is what I would suggest, right?

18:39 - 18:50

Harshith Vaddiparthi | Outskill: Number one, if you are working in BFSI, what is that one tool that you're looking for to integrate with? One tool that always pops up a lot is basically QuickBooks.

18:50 - 18:58

Harshith Vaddiparthi | Outskill: Right? QuickBooks is something that's... that's like a tool which is used in the, you know, banking, finance, and financial services, and consulting.

18:58 - 19:13

Harshith Vaddiparthi | Outskill: If you want to go ahead and integrate your QuickBooks, right, QuickBooks into it, or let's say Xerox, right? These are all these enterprise-grade products. If you want to integrate them, the best way to go ahead and integrate them is just go ahead and do

19:13 - 19:14

Harshith Vaddiparthi | Outskill: API.

19:15 - 19:30

Harshith Vaddiparthi | Outskill: just click on that, and you will go ahead and find this entire documentation, which is like a developer documentation, right? And once again, don't be

intimidated by the word developer. It just means it's just API documentation, which you can use.

19:30 - 19:40

Harshith Vaddiparthi | Outskill: So they have their own SDKs, like software development kits, right? Once again, you don't really have to do anything right now, all you just gotta do is copy this link.

19:40 - 19:46

Harshith Vaddiparthi | Outskill: go to ChatGPT, and just say, hey, I want to build an integration with QuickBooks.

19:46 - 20:06

Harshith Vaddiparthi | Outskill: And this is my solution, and this is how I want to proceed with it. Can you help me out? And guys, I'm not even kidding, this is actually one of my products which I've previously built out. It's called Agent Mag, and it's still in the process of, you know, being used by, like, a customer. And it's an enterprise-grade product, and yes, it's possible to do it with this.

20:06 - 20:20

Harshith Vaddiparthi | Outskill: Copy the link, take it to ChatGPT. In this case, I would recommend you use GPT-6 Astra on Ultra mode, because it can look into all the documentation in a much more better way. It'll create its own knowledge graph.

20:20 - 20:31

Harshith Vaddiparthi | Outskill: and then help you out with the integrations. Again, the same thing can happen with NetSuite as well, Oracle NetSuite. Any enterprise-grade applications is the same approach.

20:31 - 20:39

Harshith Vaddiparthi | Outskill: you first have to define what product that you're trying to do. You're trying to create a reporting on AI workspace, which is great.

20:39 - 20:51

Harshith Vaddiparthi | Outskill: Understand your product, take the integrations, combine them, and build a product on top of that. That's basically it. And I'm telling you, this definitely solves a lot of pain points within the organization itself.

20:53 - 21:06

Harshith Vaddiparthi | Outskill: Okay, coming back to the question of multi, multi doesn't work most of the time when we use several LLM. Can you show us how to use the console on multi? And can we use Cloud and ChatGPT

21:06 - 21:23

Harshith Vaddiparthi | Outskill: paid to counsel in multi, okay. Two separate things, again, if you want to try out get multi. I do see a lot of get multi questions, which is... which is definitely good, but I would like to say, again, think of it, it's just basically like a complete,

21:23 - 21:25

Harshith Vaddiparthi | Outskill: a complete...

21:25 - 21:42

Harshith Vaddiparthi | Outskill: I would say a council with different LLMs underneath it. That's basically it, okay? So, don't really have to worry about how to, you know, get started. It's very, very easy to do that. Just go ahead, I think we just did that yesterday. We just, you know, got started. We created the

21:42 - 21:52

Harshith Vaddiparthi | Outskill: a flow, and here it is. And I think... I don't know if you guys remember, yesterday we tried to build our very own application as well. We called it givemulti.

21:53 - 21:59

Harshith Vaddiparthi | Outskill: Harshith.com. Just, you know, just for the fun of it, I just tried to create it. I don't know what the password for this is.

21:59 - 22:06

Harshith Vaddiparthi | Outskill: I have to ask my Codex. Yeah, I think I've shown that to you yesterday. I'll try to... I'll still try to show that to you, because it's very easy to do so.

22:06 - 22:15

Harshith Vaddiparthi | Outskill: Now... now that you have this, right? Now, your question is, how do you use different LLMs? You would have to go ahead to the council, right? Council is where all of this happens.

22:15 - 22:29

Harshith Vaddiparthi | Outskill: you'll have to make sure to, you know, click on the judge. But again, it doesn't give you so much of, you know, modularity, or, you don't have so much to do. It's... so let's say Claude is a judge, Claude is going to be the judge.

22:29 - 22:48

Harshith Vaddiparthi | Outskill: You can go ahead and add... add or remove Grok and DeepSeek. Let's drill from this. Let's do high quality, and now you can just go ahead and ask something, and it's going to give you an output. Web on, that means web search is on or off. That's basically... that's pretty much how you go ahead and use it, right? That's one.

22:48 - 23:06

Harshith Vaddiparthi | Outskill: Now, the next question is, can you go ahead and use... in this part, I think the second part of the question was, can you go ahead and use Claude or ChatGPT Paige to multi? Not possible, because they are completely different tools by themselves. Completely different tools by themselves.

23:06 - 23:12

Harshith Vaddiparthi | Outskill: Let me quickly see if I can, like... Share with you guys

23:12 - 23:15

Harshith Vaddiparthi | Outskill: The output that we got yesterday.

23:18 - 23:20

Harshith Vaddiparthi | Outskill: Just a sec- just a second...

23:26 - 23:34

Harshith Vaddiparthi | Outskill: Okay, yeah, let me quickly share the output that we got yesterday, guys. Here it is. Okay, this is the output that we got.

23:34 - 23:49

Harshith Vaddiparthi | Outskill: That's basically how it looks like, the dashboard kind of looks like. The web version is this. Again, don't have to worry about how to do it, I just, you know, kind of did this in, like, ChatGPT really quickly. This was our very own interface.

23:49 - 23:52

Harshith Vaddiparthi | Outskill: Here, you have more modularity.

23:52 - 24:11

Harshith Vaddiparthi | Outskill: here you have more options, right? Because... because I made this, I literally white-coded this, it's super easy to do so, just ask your ChatGPT. We literally just did this yesterday, right? So, to do so, I would suggest you can proceed, and in this, you can select your very own models in whichever way possible, right?

24:11 - 24:25

Harshith Vaddiparthi | Outskill: So that's... that's something that I would, suggest you do, because GetMulti is great, but of course, you can build your very own version of GetMulti if the features are not sufficient, or if you want to add your own features and your own integrations.

24:28 - 24:43

Harshith Vaddiparthi | Outskill: Okay, my question's about creating clones and voices. I know, I want to know if I train my model using my voice in Hindi, but need to produce an AI video in English. Are there problems? Not really, not at all.

24:43 - 24:58

Harshith Vaddiparthi | Outskill: It's, so I'll tell you how the voice works, right? The voice is not really about the language, it's about the nuances, the connotation, the tone of your voice. So, basically, anytime we speak.

24:58 - 25:07

Harshith Vaddiparthi | Outskill: There are these, connotations, or pitch, and all of these that we speak, right? That is basically trained by the model.

25:07 - 25:23

Harshith Vaddiparthi | Outskill: It doesn't matter if you're doing it in English or Hindi, it doesn't really matter. Let me see if I actually have an example, because I actually tried to create videos in completely different languages, like Chinese and Spanish as well. It was still able to replicate my voice properly.

25:24 - 25:35

Harshith Vaddiparthi | Outskill: Because if it understands the voice, it can do it in any language, right? Any language possible. It's not really about, you know, specific language, right? I hope that clarifies your question there.

25:37 - 25:55

Harshith Vaddiparthi | Outskill: Okay, hi Afrid, can you let me know if any large banks in India or abroad develop their core applications using AI, as it's a humongous task to replace existing enterprise-wide applications, which is... which is being used by thousands and thousands of people from different departments and stakeholders.

25:55 - 25:59

Harshith Vaddiparthi | Outskill: I would... I would not say they're building anything from scratch.

25:59 - 26:12

Harshith Vaddiparthi | Outskill: From what I know from the research I've done, from the folks I've spoken to, I don't think any banks, you know, in India or abroad are building any core solution from ground up using AI.

26:12 - 26:30

Harshith Vaddiparthi | Outskill: But here's what they're doing. So let's say, I think CIBC, right? CIBC Canadian Bank, or, you know, American Express, or Chase, right? The way they... the way they do this is basically, they look into their existing... they look into their existing, stack.

26:31 - 26:43

Harshith Vaddiparthi | Outskill: Right? Their existing stack. So let me actually give you a real example. Okay, so there's... there's a... okay, yeah, this is a real example, right? So I know someone who's basically, a director at Citi, Citibank.

26:43 - 26:58

Harshith Vaddiparthi | Outskill: And now they're transitioning to JP Morgan Chase, right? Now, while they're doing it, they've seen, they basically have to do some data transfer, and, they... they actually do accounts in, like, multi-million dollars, right? There are multi-million dollars of accounts.

26:58 - 27:03

Harshith Vaddiparthi | Outskill: With thousands and thousands of people using credit cards, right? There are so many people.

27:04 - 27:05

Harshith Vaddiparthi | Outskill: If I can, you know, try to...

27:06 - 27:13

Harshith Vaddiparthi | Outskill: kind of show this to you in a visual manner, I think that'll be much more easier, right? So let's say...

27:13 - 27:17

Harshith Vaddiparthi | Outskill: They are working at, Chase, JP Morgan Chase.

27:17 - 27:31

Harshith Vaddiparthi | Outskill: And... Another pain point is that there are... Multi... million dollars of... Payments.

27:33 - 27:34

Harshith Vaddiparthi | Outskill: slash...

27:37 - 27:41

Harshith Vaddiparthi | Outskill: accounts, right? Here's what has to happen.

27:41 - 27:58

Harshith Vaddiparthi | Outskill: this is what they're managing, and now their task is... I actually don't know if this is kind of public, but, but now I think Apple is, apple is going to be... Apple Card is going to be powered by Chase, right? So that's the solution. So now they're going from one provider

27:59 - 28:10

Harshith Vaddiparthi | Outskill: to another provider right now, right? So this is a real example, guys. You can actually, you know, check it out, right? Apple... Apple Card is moving from a previous provider to JP Morgan Chase now.

28:10 - 28:19

Harshith Vaddiparthi | Outskill: Now, that pinpoint is that, here, there are A hundred, let's say, tens... Of millions off.

28:21 - 28:24

Harshith Vaddiparthi | Outskill: Of user information.

28:24 - 28:32

Harshith Vaddiparthi | Outskill: this... Has to be moved from one database from one database.

28:32 - 28:48

Harshith Vaddiparthi | Outskill: to the other database, and this is a tedious task, right? This is a very, very, very tedious task. From here, all the way to here, the latest Apple, database, right? This DB, this is going to be Shea's.

28:48 - 28:50

Harshith Vaddiparthi | Outskill: internal.

28:53 - 28:54

Harshith Vaddiparthi | Outskill: Okay, now...

28:55 - 29:13

Harshith Vaddiparthi | Outskill: Now, to answer your question, are they doing anything from ground up to work on this? No, exactly, migration, that's correct, I lost the word there. It's basically migration, right? Yes. Now, which is the best tool? So, that's the thing, right? There is... it's very hard to find a custom tool for this use case.

29:13 - 29:20

Harshith Vaddiparthi | Outskill: In that case, they would have to go ahead and build their very own tool

29:20 - 29:26

Harshith Vaddiparthi | Outskill: which integrates with existing software, like QuickBooks.

29:26 - 29:35

Harshith Vaddiparthi | Outskill: NetSuite, and wherever their SQL database exists, right? So this is the tool that they're building, new AI tool.

29:36 - 29:41

Harshith Vaddiparthi | Outskill: They built this tool for this very migration process.

29:42 - 29:46

Harshith Vaddiparthi | Outskill: But which integrates with all the existing providers.

29:48 - 30:03

Harshith Vaddiparthi | Outskill: So this is how all enterprises are now currently working. I think this actually answers a lot of your, you know, questions and doubts on how enterprises are doing it, right? And trust me, guys, I have been working with enterprises and corporates, and I do understand that

30:03 - 30:10

Harshith Vaddiparthi | Outskill: you know, it's very hard internally. They just don't, you know, go ahead and, you know, create something unlovable. That's not how it works.

30:11 - 30:22

Harshith Vaddiparthi | Outskill: They have a ton of processes, they have, you know, there's something that they have to look into, their chain of command. What's very important is they have to go ahead, understand the solution.

30:23 - 30:29

Harshith Vaddiparthi | Outskill: Create a hyper-specific solution for that use case with their existing providers.

30:29 - 30:32

Harshith Vaddiparthi | Outskill: And I think enterprises only use Claude, by the way.

30:32 - 30:57

Harshith Vaddiparthi | Outskill: For some reason, ChatGPT is not used. I've seen a lot of banks, they only use Cloud. Maybe it's for some security, I don't know, maybe some partnerships or something, but this is basically how enterprises work, guys. In one gist, I can tell you the best way, this is how enterprises work. And I, myself, as, you know, as an AI consultant, I'm looking for these kind of, you know, issues, and you should too as well, right? You should look into, if you know some enterprise folks who are facing these issues.

30:57 - 31:00

Harshith Vaddiparthi | Outskill: Go ahead, pitch them solutions.

31:00 - 31:02

Harshith Vaddiparthi | Outskill: This is what my approach would be.

31:02 - 31:03

Harshith Vaddiparthi | Outskill: I hope that helped.

31:04 - 31:20

Harshith Vaddiparthi | Outskill: Okay, Subhankar has a question. Okay, I have two questions. One is, I redeemed my multi-AI coupon, when I'm trying to use, it states, connect your OpenAI router, OpenAI key, and settings before sending the prompt. Okay.

31:20 - 31:28

Harshith Vaddiparthi | Outskill: Okay, so redemption, amazing, good. So if you need an OpenAI Open Router API key, so here's how you would proceed with it.

31:28 - 31:38

Harshith Vaddiparthi | Outskill: Go ahead to open OpenRouter.ai. So what is OpenRouter.ai? OpenedRouter... What?

31:38 - 31:39

Harshith Vaddiparthi | Outskill: Okay.

31:40 - 31:50

Harshith Vaddiparthi | Outskill: OpenRouter.ai. I was like, hey, what happened? Yeah, so OpenRouter.ai is... think of it as, like, a platform which lets you connect with multiple API keys.

31:50 - 31:55

Harshith Vaddiparthi | Outskill: Right? Multiple API keys. So, again, let me go back to the drawing board.

31:55 - 31:56

Harshith Vaddiparthi | Outskill: 8?

31:57 - 32:04

Harshith Vaddiparthi | Outskill: So, in... so now, usually what happens is, for Claude, Cloud.

32:06 - 32:12

Harshith Vaddiparthi | Outskill: GPT, let me just call OpenAI as GPT, and then... let's say you want DeepSeek.

32:13 - 32:15

Harshith Vaddiparthi | Outskill: Then, let's say you want Kimi.

32:16 - 32:25

Harshith Vaddiparthi | Outskill: Kimike to... Kimiki to whatever, guys, right? Whatever you want. Here's how it usually works, right? You get an API key from here.

32:26 - 32:41

Harshith Vaddiparthi | Outskill: And again, there's a separate API key for OpenAI, there's a separate API key for DeepSeek, there's a separate API key for Kiani. But instead, here is what OpenRouter does. Open Router has just open.

32:43 - 32:48

Harshith Vaddiparthi | Outskill: OpenRouter has only one API key that you get.

32:49 - 33:13

Harshith Vaddiparthi | Outskill: Which, basically, guys, please, I'm warning you, my drawing is going to be very bad when I'm doing arrows, but let's just say, okay, while you're doing this, it's, you can directly go ahead and get opened out to Cloud, and then you have DeepSeek, then you have Kimi, and all of that. Yeah, please, please, you know, forgive my bad drawing, but that's basically how it works. You don't need multiple API keys.

33:13 - 33:26

Harshith Vaddiparthi | Outskill: one API key is enough to get all of these. That's what Open Router is, and if you think of it, that is basically what is powering the get multi as well, right? That's basically what's powering this. In that case.

33:26 - 33:31

Harshith Vaddiparthi | Outskill: Go to Open Router, just sign up, or just click on get an API key.

33:34 - 33:37

Harshith Vaddiparthi | Outskill: Where is... Which account?

33:41 - 33:41

Harshith Vaddiparthi | Outskill: Yep.

33:43 - 33:46

Harshith Vaddiparthi | Outskill: Yeah, that's basically it. So you go ahead and create your own API key, yeah.

33:48 - 33:58

Harshith Vaddiparthi | Outskill: Okay, so the next one. From day two training, Hazen and Hexfield is shown in Hygen. I have uploaded few of my pics and videos.

33:58 - 34:05

Harshith Vaddiparthi | Outskill: How do I train the model? Also, are there any tools where I can create my clone?

34:05 - 34:19

Harshith Vaddiparthi | Outskill: And is there any step-by-step process guides from Outskill? Haitian and Hicks field are expensive. Please guide Chenundi. Okay, so, I would say, Sivancun, if you have tried out the Haitian and Higgs field, I think that's the best way to do it.

34:19 - 34:34

Harshith Vaddiparthi | Outskill: So, yes, there are multiple alternatives. So, see, the thing is, Higgs field is where all of this is already done anyways, right? There are so many of them, there's CRIA, again, there's OpenArt, you can look at multiple of these. Yeah, Runway is also really good.

34:34 - 34:40

Harshith Vaddiparthi | Outskill: But the thing is, Higgs Field is like a one-stop shop for everything, right?

34:40 - 34:49

Harshith Vaddiparthi | Outskill: You get all kinds of different API keys, you know, you can choose whichever model you want to, and the best part is it can also connect to your cloud as well.

34:49 - 34:56

Harshith Vaddiparthi | Outskill: So you can directly go ahead and chat on Flawed, and then it's gonna create your videos and do all the training and everything.

34:56 - 35:02

Harshith Vaddiparthi | Outskill: So, you can go ahead and, you know, check out Runway, which are, again, really good tools.

35:02 - 35:17

Harshith Vaddiparthi | Outskill: But nothing really like Higgs field, because Higgs field is the best place to... I mean, of course, if you want cheaper models, you can go ahead and pick a cheaper model, right? And this, instead of, let's say, you don't want Kling, you can choose something like WAN3.

35:17 - 35:29

Harshith Vaddiparthi | Outskill: WAN 3. WAN 3.0 by, Quen? I think it's by Quen, and it's much cheaper, so which you can use, right? Again, Grok Image is also cheap. Sora is not that much.

35:29 - 35:42

Harshith Vaddiparthi | Outskill: But yeah, that's basically... you can just go ahead and pick and choose. End of the day, it's all the model itself, right? So these are just platforms. The models providing it, that matters, so just go ahead and look into those.

35:43 - 35:44

Harshith Vaddiparthi | Outskill: Okay.

35:45 - 35:55

Harshith Vaddiparthi | Outskill: Okay, Nazeer has a question here. Does the data flow into OpenAI when using business-sensitive plugins such as Outlook Email? Okay.

35:55 - 36:14

Harshith Vaddiparthi | Outskill: So, if you are just using it as a consumer, then yes, OpenAI would be training this on your data, which is... that's how it works, actually, for now. OpenAI would be training the data. I mean, if you have seen how OpenAI has gotten smarter over the years, it's because of the training the data itself. But.

36:14 - 36:28

Harshith Vaddiparthi | Outskill: If you are an enterprise... if you take the enterprise plan, right? If you pick the enterprise plan, you have an option where you can choose to not let Claude or ChatGPT train on your data.

36:28 - 36:41

Harshith Vaddiparthi | Outskill: Right? So that's how you do it. It's basically on the plan. It depends on the plan. I think it's on the max plan, the enterprise plan, where you can... you can choose that OpenAI and plot should not train on your sensitive data. That's one.

36:42 - 36:50

Harshith Vaddiparthi | Outskill: And once again, if you just want complete privacy, complete security, just go ahead and, you know, download local models.

36:51 - 36:53

Harshith Vaddiparthi | Outskill: Gaurav has a question?

36:53 - 37:02

Harshith Vaddiparthi | Outskill: In your experience, which is more convenient, Codex or Cloud, Code or Kimi for beginners, and for medium and advanced users? Okay.

37:02 - 37:07

Harshith Vaddiparthi | Outskill: So, I would honestly say, even if you're a beginner, advanced.

37:07 - 37:16

Harshith Vaddiparthi | Outskill: right now, all these tools are becoming very skewed. In a sense, anyone can just go ahead and use them, right? It's not like beginners or advanced.

37:16 - 37:28

Harshith Vaddiparthi | Outskill: It's just your approach in using them, right? So, if you are just starting off, I would really suggest, again, Codex is not even a word now. I think they've brought it back.

37:28 - 37:37

Harshith Vaddiparthi | Outskill: But it's just the ChatGPT app itself. So don't be, you know, intimidated by the word code. It's just ChatGPT app itself.

37:37 - 37:52

Harshith Vaddiparthi | Outskill: you can just choose the work mode or the Codex mode, the same way you also have Claude. Claude has work mode and chat mode, but I just saw Claude's tweet yesterday. I think they are merging both of them as well.

37:52 - 37:58

Harshith Vaddiparthi | Outskill: So, what I'm trying to say is everything is just getting merged into just one single super app.

37:58 - 38:17

Harshith Vaddiparthi | Outskill: Right? So even if you're a beginner, advanced, anything, you can still go ahead and use any of these applications, and you should still be good to go ahead and use. Because the thing with LLMs is you don't have to adapt to these tools. The tools adapt to you. Meaning, if you don't understand something, you can just say.

38:17 - 38:28

Harshith Vaddiparthi | Outskill: hey, I don't understand it, calm it down. Which is what I do a lot of times, right? So, the tools adapt to you. So, beginner, medium, advanced, it adapts to you.

38:28 - 38:30

Harshith Vaddiparthi | Outskill: That's... that's what I'd say.

38:32 - 38:33

Harshith Vaddiparthi | Outskill: Okay.

38:33 - 38:49

Harshith Vaddiparthi | Outskill: How do I connect plugins to ChatGPT? Also, how do I connect a custom or in-house built application where it appears in the plugin list, and is there a process to make it appear? Okay, first one, how do you add in

38:49 - 38:56

Harshith Vaddiparthi | Outskill: How do you connect plugins through ChatGPT? I think this is, you know, our very first session which we went over. Let me try to share this again.

38:56 - 39:00

Harshith Vaddiparthi | Outskill: you open your ChatGPT, you click on the button that says Plugins.

39:00 - 39:06

Harshith Vaddiparthi | Outskill: open that right here. You can see a ton of plugins right here. All you really have to do is just

39:07 - 39:10

Harshith Vaddiparthi | Outskill: Click on the plus algorithm, I think I need a plus for this.

39:10 - 39:14

Harshith Vaddiparthi | Outskill: Click on the plus icon, And...

39:16 - 39:26

Harshith Vaddiparthi | Outskill: is to connect with ChatGPT. That's all. Connect with ChatGPT, and it's gonna connect to it, right? That's how you install or connect to plugins on ChatGPT. That's the first part. Now.

39:26 - 39:31

Harshith Vaddiparthi | Outskill: How do I connect... how do I create a custom or in-house built application?

39:32 - 39:41

Harshith Vaddiparthi | Outskill: will that appear on the plugin? Okay, two different questions again. So, I understand this one, but you say you want an in-house built application.

39:41 - 39:44

Harshith Vaddiparthi | Outskill: So, if you have built your very own application.

39:45 - 39:49

Harshith Vaddiparthi | Outskill: In that case, you will have to reach out to the partners at OpenAI,

39:49 - 40:06

Harshith Vaddiparthi | Outskill: and then reach out to them, and I think they do have some kind of a vetting process. You have to go through that, and only then you will be appeared on the plugins list of this, right? But that's... but that should not, you know, stop you from still building, because let's say Higgs feed. If I type in Higgs feed.

40:08 - 40:16

Harshith Vaddiparthi | Outskill: Okay, Hicksfield is already here. Let's, let's type something like...

40:17 - 40:24

Harshith Vaddiparthi | Outskill: what can I type in? Because there are multiple applications which still do work with it, and do not always have

40:25 - 40:30

Harshith Vaddiparthi | Outskill: some kind of, connection, right? So... Let's say, superhuman?

40:32 - 40:42

Harshith Vaddiparthi | Outskill: Yeah, that's also there. Okay, a lot of connections have now been built in, but the way they all started off was they were all not listed on the ChatGPT plugin.

40:42 - 40:47

Harshith Vaddiparthi | Outskill: They have their very own custom build. Let's, let's try this.

40:49 - 41:02

Harshith Vaddiparthi | Outskill: Okay, I think now a lot of them... okay, Sutabase... okay, okay, guys, now a lot of these are actually coming up, but the way it actually starts is you build your own custom application, and then you go ahead and

41:02 - 41:19

Harshith Vaddiparthi | Outskill: build your own MCP server, right? You build that up, and then you list it, you try to list it on the ChatGPT. To do that, you have to, you have to approach the ChatGPT team, the partner's team, which lets you go ahead and add that, plugin on it. That's basically how you do it.

41:22 - 41:22

Harshith Vaddiparthi | Outskill: Okay.

41:24 - 41:29

Harshith Vaddiparthi | Outskill: Okay, Vivek has a question. How does NA10, Zapier, Make.com compare to tools like

41:30 - 41:48

Harshith Vaddiparthi | Outskill: Workato, Cray I.O. Tools. I've observed enterprise teams approve and use tools like Workato more due to security, better control, and governance. Wanted to pick your brain based on what you're seeing in the market, okay? Workato, honestly, I'll be very honest, I'm not really

41:48 - 41:52

Harshith Vaddiparthi | Outskill: Heard about this tool, actually.

41:53 - 42:05

Harshith Vaddiparthi | Outskill: Yeah, I haven't... haven't heard about this tool. AI service connectivity. Okay, haven't really heard about this tool, but from what I... what it looks like is it's basically a workflow automation itself. Yeah, I think it's...

42:05 - 42:15

Harshith Vaddiparthi | Outskill: Yeah, one platform, no scaling integration, automation, and AI speed, yeah. Basically, a workflow automation tool built for enterprises is what I see.

42:15 - 42:27

Harshith Vaddiparthi | Outskill: Which is great. Again, if enterprises are using it, that's amazing, but from what I do see is, NATM is actually the most widely used, at least in the North American market, is what I see.

42:27 - 42:42

Harshith Vaddiparthi | Outskill: NA10 is used a lot, because in terms of security, and enterprises just do also want their very own servers, and install NA10 in their very own server, right? So that's what I have personally seen, at least in the North American market.

42:43 - 42:55

Harshith Vaddiparthi | Outskill: used a lot, anything. So Workato... so I will honestly not be able to, you know, comment on this, because I haven't used this tool. But in that case, I would say

42:55 - 43:01

Harshith Vaddiparthi | Outskill: Any tools definitely do work. If you are providing some kind of security, some kind of,

43:02 - 43:07

Harshith Vaddiparthi | Outskill: Some kind of, security, privacy with your LLMs.

43:07 - 43:09

Harshith Vaddiparthi | Outskill: Enterprises will definitely be using it.

43:10 - 43:17

Harshith Vaddiparthi | Outskill: Okay. Hands-on training, how much time, will we spend ourselves with interruption support, and we'll be working...

43:18 - 43:20

Harshith Vaddiparthi | Outskill: Project should have every participant finish.

43:21 - 43:36

Harshith Vaddiparthi | Outskill: Okay, this I'm not fully sure what you're referring to. If you are talking about the workbooks, yeah, we do have workbooks after the end of every session, so we'll also, you know, dive into our own breakout rooms, and then we'll be doing hands-on workbook training, so, yeah.

43:37 - 43:56

Harshith Vaddiparthi | Outskill: Okay, Savankar has a question. I got your answer on multi. If I connect my API key, I need, to have credits, then why is Outskill giving the tool as a bonus if I know... if I need to keep adding, credits? Okay, so, okay, in this case, I won't be fully able to answer this one, because, see.

43:56 - 44:15

Harshith Vaddiparthi | Outskill: See, it's a tool, right? It's a tool, Subhankar. If you are getting access to the tool, you would have access to at least, you know, a portion of it. Think of it as, you know, you're getting some tools, you're getting access to it, you're able to build something out of it, and of course, you know, at some point, you will still have to go ahead and bring in your own API key.

44:15 - 44:24

Harshith Vaddiparthi | Outskill: That's an additional feature, but whatever credits that you are getting, it's to give you, like, a kickstart, right? Give you, like, a kickstart, and, you know, let you...

44:24 - 44:43

Harshith Vaddiparthi | Outskill: test out the tool, let you test out the platform and everything. If you want to go ahead and make it a little bit more advanced, then of course, you can go ahead and get the API key. So I think that's, that's something I would let you know. So that's all I can tell you for now. So, use these tools as a nice kickstart.

44:43 - 44:55

Harshith Vaddiparthi | Outskill: start exploring these tools, get ideas, and then maybe once you're ready, once you want to build your own tools or your own products, you have a better idea of what's happening in the market. So, and then you can go ahead with credits.

44:56 - 44:56

Harshith Vaddiparthi | Outskill: Okay.

44:57 - 45:08

Harshith Vaddiparthi | Outskill: Is there a WhatsApp MCP server which can read my WhatsApp group messages frame? Absolutely. That is basically what I do as well. Let me show this to you right now, right? Where's my chat GPT?

45:09 - 45:12

Harshith Vaddiparthi | Outskill: I'll just open my chat JPT. Please don't.

45:12 - 45:20

Harshith Vaddiparthi | Outskill: You know, don't mind my messages, guys. The other way I talk to chat JPD. Okay, let me quickly, quickly just say...

45:21 - 45:25

Harshith Vaddiparthi | Outskill: Hey, Joris, can you look into...

45:25 - 45:36

Harshith Vaddiparthi | Outskill: my WhatsApp MCP. I don't even have to say WhatsApp MCP. I just have to say WhatsApp. That's about it, right? Just have to say something like that, and...

45:36 - 45:38

Harshith Vaddiparthi | Outskill: It's gonna fully...

45:38 - 45:51

Harshith Vaddiparthi | Outskill: read through. But what am I doing underneath? Yeah, it's taking some time. I should have just gone with light, that's much faster. But how am I doing this? The way I'm doing this is using

45:52 - 45:57

Harshith Vaddiparthi | Outskill: WhatsApp MCP server, And I use this one right here.

45:58 - 46:13

Harshith Vaddiparthi | Outskill: this is something that I use. Again, don't be... don't be scared, it's not a GitHub, it's nothing. It's very, very simple, guys. Guys, at this point, you should be used to seeing GitHub, and I hope you guys are all used to it, because it's just a place where code is published.

46:13 - 46:25

Harshith Vaddiparthi | Outskill: So now, how do you use this? You copy this link, so Prem, please listen carefully, and give me your... maybe type in a thumbs up, or you understood after you understood this one. So, Prem, here are the steps for you.

46:25 - 46:29

Harshith Vaddiparthi | Outskill: Copy this link, And open a new chat.

46:30 - 46:33

Harshith Vaddiparthi | Outskill: Let me open the new chat in my normal chat GPT.

46:34 - 46:41

Harshith Vaddiparthi | Outskill: And then I would say, I would... I would paste it here, And then I would say.

46:41 - 46:45

Harshith Vaddiparthi | Outskill: Install this, and... Show me, though.

46:45 - 46:51

Harshith Vaddiparthi | Outskill: You are. That's all. So, you're basically creating a WhatsApp bridge.

46:51 - 47:03

Harshith Vaddiparthi | Outskill: Right, you're creating a WhatsApp bridge here, and the way the bridge works is, your computer is acting as a bridge between your WhatsApp and the LLM.

47:03 - 47:15

Harshith Vaddiparthi | Outskill: Right? So now it's looking into the entire installation process. Again, this can be done on Claude, it can be done on any applications, guys, okay? I'm just giving you an example of ChatGPT, because I use that a lot.

47:15 - 47:25

Harshith Vaddiparthi | Outskill: You can do this exact same thing on cloud as well, or let's say my DeepSeek, you know, harness, or anything. You can do this on any, any of these tools.

47:26 - 47:40

Harshith Vaddiparthi | Outskill: Right? And I hope, Prem, I hope you're able to understand me, right? So, it's looking into the entire bridge. Do you see that? The bridge stores WhatsApp data locally, so my computer would be having all the WhatsApp data.

47:40 - 47:47

Harshith Vaddiparthi | Outskill: pairing is complete when it can scan. So it's just pairing it, and how do you pair it? I think, I think you already know it.

47:47 - 47:50

Harshith Vaddiparthi | Outskill: On the phone, just go to...

47:53 - 47:59

Harshith Vaddiparthi | Outskill: Just on the phone, you just have to go to Linked Devices, yeah, just go to Linked Devices, right?

47:59 - 48:00

Harshith Vaddiparthi | Outskill: link the devices.

48:00 - 48:13

Harshith Vaddiparthi | Outskill: link devices, and then link a new device and scan the QR code that you are getting here, that's about it. That's basically how you go about doing that. And again, the exact same thing can be done with any of these.

48:13 - 48:31

Harshith Vaddiparthi | Outskill: Right? You just have to scan it. Yeah, WhatsApp, yeah, it's already installed for me. It's, it's using the existing installation flow, but, it's just gonna show up a QR code, and then once the QR code is scanned, it's gonna go ahead and completely store all the data locally.

48:31 - 48:44

Harshith Vaddiparthi | Outskill: Yeah, that's basically how this works, guys. Prem, I hope you got the idea of how this works. Guys, don't scan this one. If you do so, I will be able to see all your WhatsApp messages, so please don't do that. Okay.

48:45 - 48:47

Harshith Vaddiparthi | Outskill: Let me go back.

48:47 - 48:50

Harshith Vaddiparthi | Outskill: 2... Artem.

48:50 - 48:51

Harshith Vaddiparthi | Outskill: Yep.

48:53 - 49:01

Harshith Vaddiparthi | Outskill: How does it differ from installing WhatsApp Desktop? I see that in the chat. Brian, WhatsApp Desktop is the app

49:01 - 49:17

Harshith Vaddiparthi | Outskill: WhatsApp MCP is where you do not need the app, you can just search for, hey, look into my group, summarize the entire group, and tell me what's going on. That's it. On WhatsApp desktop, you really can't do that, right? So, that's what you can do.

49:18 - 49:22

Harshith Vaddiparthi | Outskill: Okay. Gaurav has a question.

49:22 - 49:32

Harshith Vaddiparthi | Outskill: Is there any major benefits of using OpenClaw, and how do you recommend any alternatives which may be easier, cheaper for

49:32 - 49:43

Harshith Vaddiparthi | Outskill: beginners, medium, advanced. Again, guys, this concept of beginner, medium, advanced, honestly, it's... it's becoming less and less, you know, relative, because

49:44 - 49:56

Harshith Vaddiparthi | Outskill: all these LLMs are adapting to our level, our expertise level. So there's no such thing as a specific beginner guide or advanced guide. Of course, there are, but that's the idea that I'm trying to give you.

49:57 - 50:10

Harshith Vaddiparthi | Outskill: Now, OpenClaw, you might have seen this tool. OpenClaw is a tool which basically allows you to integrate with multiple different applications, you know, do various different stuff, right? So if I just give you an example of how this works.

50:10 - 50:19

Harshith Vaddiparthi | Outskill: So, the better example is, let's say, I think I've shown this to you guys kind of like yesterday. So, this is my open cloud, right? That's literally my open cloud, and...

50:19 - 50:26

Harshith Vaddiparthi | Outskill: this is living on a server of mine. It has all integrations to me, right? If I just say.

50:26 - 50:35

Harshith Vaddiparthi | Outskill: If I just talk to it, it's gonna talk back to me, because why? It's my one single brain. Hey, Jarvis, can you just say hi to all the learners in the chat?

50:38 - 50:43

Audio shared by Harshith Vaddiparthi | Outskill: Hi, everyone! Great to see you all here. Hope you're learning something useful and having a good time.

50:45 - 50:56

Harshith Vaddiparthi | Outskill: Right? How am I doing that? It's all integrations. The entire magic lies of OpenClaw in integration. So let me just go back to the, Hermes, and...

50:56 - 51:07

Harshith Vaddiparthi | Outskill: for all the folks who are, you know, not aware of OpenClaw, don't really worry, it's just basically... think of it as, like, an infrastructure. It's like an infra... it's like an architecture. This tool, it's called OpenClaw.

51:07 - 51:13

Harshith Vaddiparthi | Outskill: It's an architecture where... think of it as one single brain, right?

51:16 - 51:21

Harshith Vaddiparthi | Outskill: OpenCloud. I'll show you alternatives also. Alternatives which I use.

51:21 - 51:23

Harshith Vaddiparthi | Outskill: Right? OpenCloud. Now.

51:23 - 51:32

Harshith Vaddiparthi | Outskill: How does it work, right? You've got open clock. Now, you can add in your memory into this.

51:32 - 51:47

Harshith Vaddiparthi | Outskill: you can add in your... you can connect this with your emails. Again, guys, remember the plugins and MCPs? You can give it any of these plugins, and it will all be here inside this. Let's say I give it Outlook.

51:49 - 51:52

Harshith Vaddiparthi | Outskill: And then, let's say, I'll give it 6 feet.

51:55 - 52:02

Harshith Vaddiparthi | Outskill: F-E-I-N-D? Or, yeah, whatever the spelling is, guys. Or let's say if I give it access to my newsletter.

52:02 - 52:03

Harshith Vaddiparthi | Outskill: Right?

52:04 - 52:24

Harshith Vaddiparthi | Outskill: Guys, whatever integrations there are, you can go ahead and give it this. And the best part about something like OpenClaw is that it has access to your memory. So every day, it builds on your memory. Every day, it, you know, it can look into your emails and add... keep on building all this entire resources, entire big

52:24 - 52:26

Harshith Vaddiparthi | Outskill: It's test... think of it as a second brain.

52:26 - 52:46

Harshith Vaddiparthi | Outskill: Right? It works as your second brain, and that's basically how I am working with it as well. I've taken it a little couple of more steps ahead. I tried to give it a voice, as you can see. I'm really, you know, as a kid, I always wanted to have my own Iron Man, so I, you know, I have my own Jarvis, which I just talked to, right? As you can see all of this.

52:46 - 52:51

Harshith Vaddiparthi | Outskill: It just looks fancy. Nothing that's... honestly, they're all integrations above it.

52:51 - 53:00

Harshith Vaddiparthi | Outskill: There are all integrations underneath it, it's just one single brain which you are giving access to. That's basically it. Now.

53:00 - 53:14

Harshith Vaddiparthi | Outskill: If I show you an alternative, which I use, it's Hermes. Hermes is another alternative. You can also try to go ahead and install Hermes as well, instead of, let's say, OpenClock. There are alternatives.

53:14 - 53:17

Harshith Vaddiparthi | Outskill: That's how you go ahead and do that.

53:19 - 53:20

Harshith Vaddiparthi | Outskill: Okay.

53:20 - 53:28

Harshith Vaddiparthi | Outskill: If I want output in PowerPoint, why must we use Gamma? Can't we use ChatGPT or Cloud?

53:28 - 53:46

Harshith Vaddiparthi | Outskill: Is using Gamma, the output in PowerPoint is more professional? Okay, I think this is... this question is about the plugin, plugin thing that we did. So, let me clarify this, right? So, a lot of folks are like, hey, I don't use Gamma, why is Gamma in the worksheet, or why do I need this when it's a PowerPoint?

53:46 - 53:58

Harshith Vaddiparthi | Outskill: Guys, don't look at worksheet as just the tools of using Gamma or using Asana, right? You know, remember the worksheet? Guys, the worksheet is not just about the tools.

53:58 - 54:18

Harshith Vaddiparthi | Outskill: It's about your approach. In the worksheet, if you know, I think all of you have completed the worksheet, the very first one, which was the plugin thing. So, Gamma, if you don't like Gamma, you don't have to use it. But after that worksheet, what you have learned is that how to go ahead and implement plugins.

54:18 - 54:26

Harshith Vaddiparthi | Outskill: That is your learning. Now, if I don't want to use Gamma, that's okay. I still know how to go ahead and use Canva.

54:26 - 54:35

Harshith Vaddiparthi | Outskill: Right? If I don't want to use this, I can just go ahead and use the Microsoft... Microsoft, tool, right? Microsoft, let's say...

54:37 - 54:40

Harshith Vaddiparthi | Outskill: Microsoft... what does Microsoft Office?

54:42 - 54:57

Harshith Vaddiparthi | Outskill: Yeah, let's say Outlook, let's say, okay, there's a, let's say Dataverse, right, or Teams, or Calendar, any of these. You can use any of these. So that's basically the concept of it, and to answer your question straight up, yes.

54:57 - 55:14

Harshith Vaddiparthi | Outskill: In that case, if you just want the output in PowerPoint, you don't have to use Gamma. You can directly use PowerPoint. But again, Gamma is, like, a widely used tool, where a lot of people, you know, create presentations there, and it's just easier to do so as well, and now you also learned a plugin and an MCP connection.

55:14 - 55:29

Harshith Vaddiparthi | Outskill: So that's how it is. It all depends on your workflow. We're just trying to give you as much information as possible, and give you as many data points as possible, so that you can, you know, build your own stuff, right? You can do your own workflows. So that's what I would say.

55:30 - 55:41

Harshith Vaddiparthi | Outskill: Okay, could I... could I automate billing, other accounting tasks, and the tally part for my father's auto parts trading business, which has thousands of SKUs?

55:41 - 55:52

Harshith Vaddiparthi | Outskill: honestly, whoever you are, man, I'm telling you, very, very similar use case that I am kind of in as well. So, my dad is also an accountant, and my dad uses Talia a lot.

55:52 - 56:02

Harshith Vaddiparthi | Outskill: Tally uses Tally and SAP. You know, he's, like, in his early 50s, and he doesn't really like AI a lot, but I still try to tell him that it's possible to do so.

56:02 - 56:13

Harshith Vaddiparthi | Outskill: And the best way how I would put this is that you have to build it out, you have to build the integrations, you have to build it out. In this case, Tally. Number one, Tally.

56:13 - 56:24

Harshith Vaddiparthi | Outskill: Find the tally integrations, find the problem statement that you want to go ahead and solve for your dad, and then just go ahead and build out that tool, and just give him that application itself.

56:25 - 56:40

Harshith Vaddiparthi | Outskill: Excuse me. So that is the best way I would tell you to proceed, okay? Whatever tool it is, find a tool, find the integration, build out the product, and give it to them, and they'll be using it. And yes, it's possible to automate billing, it's possible to

56:40 - 56:42

Harshith Vaddiparthi | Outskill: Automate accounting tasks.

56:42 - 57:01

Harshith Vaddiparthi | Outskill: I automate a lot, so one of my biggest, biggest use cases, you know, for my repeat clients is basically billing automation itself. Billing automation, revenue operations, and a lot of financial-related, you know, queries itself, because it's very easy, and it's very tedious also at the same time, right? Because

57:01 - 57:15

Harshith Vaddiparthi | Outskill: you find the emails, all the invoices are literally just sitting there, but there's a turnaround time of, like, 60 days. Instead, you can just, you know, automate it with, like, AI with a very nice document processing tool, and you can do that in, like, days.

57:15 - 57:20

Harshith Vaddiparthi | Outskill: Right? So that's how it works, and whatever tool you're using, it's possible to do so.

57:22 - 57:30

Harshith Vaddiparthi | Outskill: Okay, okay, Nazeer has another question. What is the data risk, okay, what is the data leakage risk of integrating Outlook email with these models?

57:31 - 57:36

Harshith Vaddiparthi | Outskill: Leakage... I wouldn't call it a leakage risk, I would call it a training risk.

57:36 - 57:40

Harshith Vaddiparthi | Outskill: Because if you connect your Outlook email, once again, so Nazeer.

57:40 - 57:56

Harshith Vaddiparthi | Outskill: if I just connect my Outlook with ChatGPT, it doesn't mean that it's always, you know, keeping an eye on my email. It doesn't work that way. It doesn't mean that, hey, it's always constantly... this ChatGPT is always constantly looking into my email every day, whatever's happening. That's not how it works.

57:56 - 58:01

Harshith Vaddiparthi | Outskill: That's... they're legally not allowed to do that, because that's a, you know, that's like a compliance issue.

58:01 - 58:18

Harshith Vaddiparthi | Outskill: The way it actually works is, let's say if I ask this. If I ask, summarize the most recent thread with procurement, blah blah blah, right? If I do that, if I give it a prompt, that's when the Outlook email plugin is act... the Outlook email MCP is activated.

58:18 - 58:24

Harshith Vaddiparthi | Outskill: Once that's done, now... now ChatGPT can look into the entire emails.

58:25 - 58:40

Harshith Vaddiparthi | Outskill: that's when it can go ahead and kind of train on the data, and which is something that actually happens, which does happen, right? But if you do not want that to happen, the best thing I would really suggest is just go ahead and,

58:40 - 58:48

Harshith Vaddiparthi | Outskill: go ahead and proceed with the Enterprise Edition, where they don't train on your data. That's one, or just use local models.

58:52 - 59:04

Harshith Vaddiparthi | Outskill: Okay, can you tell us... can you tell us more about Llama? What's the main purpose? What's the best use? Okay, Llama, two things. So, are you talking actually about Llama, or are you maybe talking about OLAMA?

59:04 - 59:10

Harshith Vaddiparthi | Outskill: So... Llama, basically, like, all these other LLMs.

59:10 - 59:19

Harshith Vaddiparthi | Outskill: This drawing is disgusting, man. I have to get good at, you know, drawing arrows. Yeah, hola, Mark Weston, got it, got off. So,

59:20 - 59:28

Harshith Vaddiparthi | Outskill: If you're talking about llama, LLAMA. Llama is, modeled by

59:28 - 59:42

Harshith Vaddiparthi | Outskill: Facebook, or sorry, Meta, right? It's a model by Meta, Llama 3 and all of that, right? Llama 4, they have their own models, that's one. But I see your question is about OLAMA, I see that's what you mentioned. So what is Olama?

59:44 - 59:45

Harshith Vaddiparthi | Outskill: Or...

59:45 - 59:47

Harshith Vaddiparthi | Outskill: Excellent.

59:48 - 59:54

Harshith Vaddiparthi | Outskill: Why am I typing that? Okay, yeah. So, OLAMA. OLAMA is nothing but...

59:55 - [01:00:05]

Harshith Vaddiparthi | Outskill: Again, it has nothing to do with Llama of Meta. This is a completely different application. And this is... think of it as a Play Store or an App Store for

[01:00:06] - [01:00:10]

Harshith Vaddiparthi | Outskill: AI models, right? Play Store and App Store for AI models.

[01:00:10] - [01:00:17]

Harshith Vaddiparthi | Outskill: That means, if you just click on the model catalog, you're gonna find a ton of these models.

[01:00:17] - [01:00:22]

Harshith Vaddiparthi | Outskill: like, GLM 5.3, GLM51B Flash, you know?

[01:00:22] - [01:00:35]

Harshith Vaddiparthi | Outskill: Alright, 1.5... there's so many models at this point, there's so many, so many of these. Again, these are all open-source models. Now what happens is that, let's say I pick this, and I haven't heard about this model.

[01:00:35] - [01:00:41]

Harshith Vaddiparthi | Outskill: Ordinate, ordinate the major step toward foundation model through end-to-end self-improvement? Okay, good.

[01:00:41] - [01:00:46]

Harshith Vaddiparthi | Outskill: Yeah, Gemini 4, yeah, Gemini 4 dropped, but Gemini 4 is not open source.

[01:00:46] - [01:00:51]

Harshith Vaddiparthi | Outskill: Gemini is Google's own proprietary model, that is not open source.

[01:00:51] - [01:00:56]

Harshith Vaddiparthi | Outskill: Gemma is Google's open source class of models, which is definitely open source.

[01:00:56] - [01:00:58]

Harshith Vaddiparthi | Outskill: In that case, let me try...

[01:00:59] - [01:01:06]

Harshith Vaddiparthi | Outskill: Gemma, I would recommend Gemma 4. Yeah, Gemma 4. Again, this is also by Google, but the open source class of models.

[01:01:06] - [01:01:14]

Harshith Vaddiparthi | Outskill: Here, what you do is just copy this and install the model, and locally, you can go ahead and have your own LLM running.

[01:01:15] - [01:01:22]

Harshith Vaddiparthi | Outskill: no internet connection required, no ChatGPT subscription required, all running locally itself, so that's what I would suggest.

[01:01:25] - [01:01:40]

Harshith Vaddiparthi | Outskill: Okay. Is it permitted to use the course transcript, Q&A, and other provided resources as a private knowledge base for personal RAG AI learning output without redistributing the original materials? If the co-pilot is later made available to the other learners?

[01:01:40] - [01:01:53]

Harshith Vaddiparthi | Outskill: Would separate permission be required? Okay, regarding the permissions and all that, I would say please, you know, reach out to the Outskill team, but by and large, what I can say, everything that you're learning, right, all the transcripts, Q&A, you know.

[01:01:53] - [01:02:03]

Harshith Vaddiparthi | Outskill: All of that, man, absolutely you can, right? You can... it's... that's actually encouraged as well. You know, you... we do encourage, you know, you can just go ahead, put it all in maybe, like, a resource.

[01:02:03] - [01:02:14]

Harshith Vaddiparthi | Outskill: you can create your own Notebook LM, you can put everything in that, or create your own project in ChatGPT, and it'll just make you better in terms of learning. So, it's definitely encouraged, and definitely you can do so.

[01:02:16] - [01:02:27]

Harshith Vaddiparthi | Outskill: Any tips to minimize token credit usage? I've already burned through all my N80 AI credits with the last two web books. Okay.

[01:02:27] - [01:02:36]

Harshith Vaddiparthi | Outskill: Okay, minimize token credit usage, okay? That's one thing, right? So, couple of ways to do it. One, I would really suggest,

[01:02:36] - [01:02:52]

Harshith Vaddiparthi | Outskill: use... use Open Router, right? Use Open Router, and use these, you know, Chinese models, which are very, very cheap, right? They're very, very cheap and very, very powerful as well. I would really suggest you can just go ahead and use it with Quen.

[01:02:54] - [01:02:55]

Harshith Vaddiparthi | Outskill: Discover models.

[01:02:57] - [01:03:05]

Harshith Vaddiparthi | Outskill: Yeah, Quen, Quen is really good, it's really cheap as well. DeepSeek, I would say DeepSeek is honestly the best one to go ahead and use.

[01:03:05] - [01:03:17]

Harshith Vaddiparthi | Outskill: So, just, you know, you don't really need high cognitive load for really, you know, simple workflows. In that scenario, just use tools like LeapSeq, which is going to be a fraction of the cost

[01:03:17] - [01:03:32]

Harshith Vaddiparthi | Outskill: that you're paying for ChatGPT, right? If you are using your... using this on NA10, instead of using the OpenAI node, go ahead and use the Opened Router node, put in your OpenAI API key, and then select the DeepSeek

[01:03:32] - [01:03:38]

Harshith Vaddiparthi | Outskill: DeepSeek, LLM. That's gonna give you a lot more usage. It can go up for, like, a month.

[01:03:39] - [01:03:44]

Harshith Vaddiparthi | Outskill: Right? And you can go ahead and replenish them later. So that's what I would suggest.

[01:03:45] - [01:03:50]

Harshith Vaddiparthi | Outskill: How to ensure privacy while sharing information to all these AI agent or cloud, and all.

[01:03:51] - [01:04:02]

Harshith Vaddiparthi | Outskill: Okay, that's a very, very big issue, because the point is that if we are connecting it to Claude, if we are connecting it to ChatGPT, they do learn out of those, right? There's nothing...

[01:04:02] - [01:04:05]

Harshith Vaddiparthi | Outskill: Honestly, it's very hard to do so, because...

[01:04:05] - [01:04:22]

Harshith Vaddiparthi | Outskill: you know, whatever I'm kind of, like, searching, whatever I'm kind of working on, if I have selected, you know, that's like a trade-off that we're doing. It's like an intelligence and privacy trade-off, right? If I want to borrow intelligence from GPT-6 Astra, what is the best model I would really suggest.

[01:04:23] - [01:04:26]

Harshith Vaddiparthi | Outskill: In that case, I'm really trading off my privacy.

[01:04:26] - [01:04:34]

Harshith Vaddiparthi | Outskill: Right? So that is something that does happen. It's still something very new to kind of, work on.

[01:04:34] - [01:04:40]

Harshith Vaddiparthi | Outskill: But if you really are, you know, worried about privacy and security, here is what I would suggest.

[01:04:40] - [01:04:49]

Harshith Vaddiparthi | Outskill: take the... take the, open source model, maybe, like, a Kimi K3 or, like, a GLM, take the open source model.

[01:04:49] - [01:04:56]

Harshith Vaddiparthi | Outskill: Rent out your own GPU, and run that entire model on your very own GPU.

[01:04:56] - [01:05:08]

Harshith Vaddiparthi | Outskill: If you do so, you have your own LLM. So basically, instead of paying for API credits to OpenAI, you're paying for the rent of the GPU.

[01:05:08] - [01:05:24]

Harshith Vaddiparthi | Outskill: You're paying for the rent of the GPU, which is, again, you, you know, running that world-class model, maybe, like, GLM 5.3, or a Kimi, right? Kimi, right? That is what I would suggest. In that case, everything, all the computation is happening in your very own server itself.

[01:05:25] - [01:05:28]

Harshith Vaddiparthi | Outskill: Right, I hope that... okay, repeat again. Let me...

[01:05:29] - [01:05:42]

Harshith Vaddiparthi | Outskill: quickly share this, because I think that's an important topic which can help you a lot. I think a lot of folks, you know, had this question, right? So, guys, all of you know about these, right? You all know about... number one is the

[01:05:42] - [01:05:48]

Harshith Vaddiparthi | Outskill: closed... closed source models.

[01:05:52] - [01:05:55]

Harshith Vaddiparthi | Outskill: That's one. The other one is...

[01:06:01] - [01:06:06]

Harshith Vaddiparthi | Outskill: You all know about this, right? Closed souls, moderns. I'm just gonna quickly, quickly list them down.

[01:06:07] - [01:06:21]

Harshith Vaddiparthi | Outskill: Claude... Chat... GPT... Gemini... what else, what else? So many, so many, why am I, you know...

[01:06:21] - [01:06:29]

Harshith Vaddiparthi | Outskill: Not getting all of them, okay. So for now, let's just keep it them. Let's just keep it as that. And now... now, all the open source models are...

[01:06:30] - [01:06:31]

Harshith Vaddiparthi | Outskill: Deepseq?

[01:06:32] - [01:06:33]

Harshith Vaddiparthi | Outskill: Excuse me?

[01:06:35] - [01:06:36]

Harshith Vaddiparthi | Outskill: Gwen?

[01:06:38] - [01:06:42]

Harshith Vaddiparthi | Outskill: Moonshot, I think Moonshot is there, what else, what else, what else?

[01:06:42] - [01:06:49]

Harshith Vaddiparthi | Outskill: **** Yeah, guys, I just mentioned a lot of them. Yeah, GLM, thank you for that, GLM.

[01:06:49] - [01:07:00]

Harshith Vaddiparthi | Outskill: Yeah, so now... now, what is the difference? So here, you are directly paying Bing... Paying the subscription.

[01:07:02] - [01:07:08]

Harshith Vaddiparthi | Outskill: Subscription, or... paying for API?

[01:07:08] - [01:07:09]

Harshith Vaddiparthi | Outskill: usage.

[01:07:10] - [01:07:15]

Harshith Vaddiparthi | Outskill: That's one. Here, Here, you have 3 options.

[01:07:15] - [01:07:25]

Harshith Vaddiparthi | Outskill: you can pay the subscription, you can pay for your API usage, or you can Download the entire model.

[01:07:25] - [01:07:28]

Harshith Vaddiparthi | Outskill: And use for free.

[01:07:28] - [01:07:32]

Harshith Vaddiparthi | Outskill: That's it. You can use for free. But here's a caveat.

[01:07:33] - [01:07:37]

Harshith Vaddiparthi | Outskill: The caveat here is, right here, testing.

[01:07:37] - [01:07:42]

Harshith Vaddiparthi | Outskill: Can anyone just do that? Yes and no?

[01:07:42] - [01:07:44]

Harshith Vaddiparthi | Outskill: What I mean by that is.

[01:07:44] - [01:07:48]

Harshith Vaddiparthi | Outskill: to run such a big model like DeepSeek.

[01:07:49] - [01:07:56]

Harshith Vaddiparthi | Outskill: what you would need is a lot of compute. You would need a very, very big GPU,

[01:07:57] - [01:08:02]

Harshith Vaddiparthi | Outskill: That will cost you, you know, about \$10,000 or \$20,000 itself.

[01:08:02] - [01:08:13]

Harshith Vaddiparthi | Outskill: Right, the entire GPU itself, it costs you 20... the entire setup will at least cost you, like, \$20,000. After that, you can run all of this, or you can just down... you can just buy something like...

[01:08:14] - [01:08:27]

Harshith Vaddiparthi | Outskill: So I am actually getting a DGX parts very soon, guys. This is something that I'm, you know, getting. So this is a DGX parts, which is like a box that you get, with which you can run your own local models, right?

[01:08:28] - [01:08:30]

Harshith Vaddiparthi | Outskill: Your own local models.

[01:08:31] - [01:08:35]

Harshith Vaddiparthi | Outskill: This DGX parts, like, NVIDIA DGX parts, is something that you would buy.

[01:08:36] - [01:08:41]

Harshith Vaddiparthi | Outskill: Right? The... let me keep that. And, okay, DGX.

[01:08:42] - [01:08:48]

Harshith Vaddiparthi | Outskill: Spark, which will cost you about \$6,000, right? That's what it is.

[01:08:48] - [01:08:55]

Harshith Vaddiparthi | Outskill: That's one. But, you can still use it By renting it.

[01:08:55] - [01:09:05]

Harshith Vaddiparthi | Outskill: So there are multiple platforms where people already have these GPUs, so instead of paying that, you know, \$6,000 directly, you are basically paying

[01:09:06] - [01:09:08]

Harshith Vaddiparthi | Outskill: \$20 per month.

[01:09:10] - [01:09:18]

Harshith Vaddiparthi | Outskill: on your very own VPS, by renting your own server, which has your own model, this is fully, fully free.

[01:09:18] - [01:09:24]

Harshith Vaddiparthi | Outskill: Again, the same amount, you're either paying for subscription, but here, the model is completely yours.

[01:09:24] - [01:09:30]

Harshith Vaddiparthi | Outskill: Does that make sense, guys? Does that make sense? Can I get a yes in the chat if that makes sense completely?

[01:09:30] - [01:09:31]

Harshith Vaddiparthi | Outskill: Right?

[01:09:31] - [01:09:38]

Harshith Vaddiparthi | Outskill: Okay, so we do have, a couple more questions. I do see, you know, we have 37 more questions, so here's what I'm gonna do, right?

[01:09:39] - [01:09:43]

Harshith Vaddiparthi | Outskill: Here's what I'm gonna do. I'm gonna take all of these questions.

[01:09:43] - [01:09:51]

Harshith Vaddiparthi | Outskill: what I'll be doing is I'll be completely answering them myself, and I will be adding them all in this resource.

[01:09:51] - [01:10:02]

Harshith Vaddiparthi | Outskill: So you guys can go ahead and check out all your questions, so that way, none of your questions are left unanswered. I'm gonna make sure all your questions are fully, fully answered.

[01:10:02] - [01:10:12]

Harshith Vaddiparthi | Outskill: And just please go ahead and check out this, link. It'll also be dropped in the, you know, in your LMS as well. Everything would be shared, right? So that's what I would say.

[01:10:13] - [01:10:23]

Harshith Vaddiparthi | Outskill: So please go ahead and do that. So I think we actually are out of time right now. I think this was, I think, genuinely such an amazing session, guys. I really loved it. I loved...

[01:10:23] - [01:10:44]

Harshith Vaddiparthi | Outskill: you know, all your Q&A, all your questions that you've asked. It kept me also on the toes, you know, showing multiple different things. I love the question that you guys are also challenging me, and I was able to share my entire playbook in terms of how I operate my own, you know, business and my... all of that. So I love Vittorio. So yeah, thank you again for all of this, guys, and thank you, Sumedha and team, for the opportunity.

[01:10:49] - [01:11:00]

Sumedha: Thanks so much, Harshith. That was another insightful session, another insightful hour spent. Thank you so much for that, and I'll let you go have some rest, and join back for the session again.

[01:11:00] - [01:11:10]

Sumedha: So, thank you so much for taking it up, and I can already see the gratitude and the love coming in for you. Also, people do post about this

[01:11:10] - [01:11:32]

Sumedha: on the LMS as well, besides the chat, because that also gives more visibility that the sessions are going well, and it's a very good motivation for our mentors as well, you know, that the sessions are actually going well. So, yeah, I would request you to also put it up in the LMS, in the gratitude channel.

[01:11:33] - [01:11:40]

Sumedha: Thank you so much for staying back and joining the office hours. We will go ahead, take a quick

[01:11:40] - [01:11:58]

Sumedha: 30 minutes break, and we will come back and join the main session. So today, the mentor is Aksharth. We will have Aksharth joining in for teaching you advanced MCP and Codex. So, I hope you guys are very excited for that. Go ahead, take your quick 30 minutes break, and I'll see you in 30 minutes.

[01:12:00] - [01:12:00]

Harshith Vaddiparthi | Outskill: Thank you.
