

Workbook : AI Productivity Workflows

Build Your Own SOP Generator Skill in ChatGPT

What You Will Build Today

By the end of this session, you will have:

1. A working **SKILL.md** file generated using the GitHub skill creator
2. A ChatGPT Project that permanently uses that Skill
3. A reusable SOP Generator
4. A clear understanding of how to build more Skills yourself

Time required: 30–45 minutes

Part 1 – Understand What We Are Doing

You are not coding.

You are creating a structured instruction document called **SKILL.md**.

This file tells ChatGPT:

- What the Skill does
- What input it expects
- What output format it must follow
- What steps it must always execute

Once uploaded into a Project, ChatGPT will follow it automatically.

Think of it as writing a permanent instruction manual for ChatGPT.

Part 2 – Step-by-Step Workflow Overview

Here is the full flow you will follow:

Step 1

Go to the GitHub Skill Creator repository

Step 2

Download the base `SKILL.md` template

Step 3

Paste its contents into ChatGPT and describe what you want to build

Step 4

ChatGPT generates a customized `SKILL.md`

Step 5

Download that file

Step 6

Create a ChatGPT Project

Step 7

Upload the generated `SKILL.md` into the Project

Step 8

Use the Project to generate SOPs

Part 3 – Go to the Skill Creator

Open this link:

<https://github.com/anthropics/skills/tree/main/skills>

Then open:

<https://github.com/anthropics/skills/tree/main/skills/skill-creator>

Download (or Copy) the file named:

SKILL.md

Save it on your computer.

Do not edit it yet.

Part 4 – Generate Your SOP Skill

Step 1: Copy the Template

Open the downloaded **SKILL.md**.

Select all content.

Copy it.

Step 2: Paste Into ChatGPT

Open a fresh ChatGPT chat.

Paste the entire `SKILL.md` content.

Now add this instruction below it:

I want to build a Skill called "SOP Builder".

This Skill should:

- Accept a plain language description of any internal process
- Generate a structured Standard Operating Procedure document
- Always include:
 - Title
 - Version and Date
 - Purpose
 - Scope
 - Roles and Responsibilities
 - Step-by-step numbered process with clear ownership
 - Common Issues / Exceptions
 - Final Output / Completion Criteria

The output should be professional, structured, and consistent every time.

Rewrite the `SKILL.md` so it works as a complete SOP Generator Skill.

Send it.

If ChatGPT asks any follow-up questions, assume the best possible solution and proceed forward.

ChatGPT will now generate a fully structured Skill file.

This is your custom Skill.

Step 3: Save the Generated Skill

Once ChatGPT outputs the final Skill:

Copy the entire response.

Paste it into a new file.

Name it:

`SOP_BUILDER_SKILL.md`

Save it.

That is your final Skill file.

Part 5 – Create a ChatGPT Project

Now we activate the Skill.

Step 1

In ChatGPT sidebar, click:

Projects → New Project

Name it:

SOP Generator

Step 2

Open the Project.

Upload the file:

`SOP_BUILDER_SKILL.md`

Step 3

In **Project Settings**, add this instruction:

Use the uploaded SKILL.md file as the primary instruction set.
Whenever I describe a process, generate a structured SOP following
that format exactly.

Save.

Your Skill is now active.

Part 6 – Test Your Skill

Now we test it.

Inside your SOP Generator Project, paste this:

When a client raises a complaint, the Account Manager logs it within 2 hours, acknowledges within 4 hours, investigates within 3 business days, gets Team Lead approval, then sends final resolution and closes it in the tracker. Create an SOP for this process.

Send.

You should now receive a fully structured SOP document.

If something is missing, refine your Skill file and re-upload it.

What NOT To Do

Do not:

- Overcomplicate the Skill instructions
- Add design elements or formatting logic beyond structure
- Add unnecessary tone instructions
- Turn this into a branding exercise
- Add decorative content

Keep it structural and practical.

This is a workflow Skill, not a marketing document.

How the Skill Actually Works

The **SKILL.md** file defines:

1. The Skill name
2. Description
3. Expected input
4. Processing steps
5. Required output format
6. Rules the model must follow

Once uploaded into a Project, ChatGPT reads it before every response inside that Project.

That is why you do not need to repeat instructions.
