

In Session

AIAP Cohort - Day 1 Workbook

ChatGPT Skills + MCP Plugins in Action: Asana + Gamma + Your Own Slide Skill

Demo Video for reference: TBD

What You Will Achieve by the End

- A reusable portable Slide Skill file (SLIDE_SKILL.md) that you create with ChatGPT and can attach to future chats.
 - Asana and Gamma connected to ChatGPT.
 - A live Asana project built from a sample meeting transcript—tasks, owners, due dates and priorities, all automatic.
 - A VP-ready, on-brand Gamma deck built through your Slide Skill - same quality bar, same brand, every run.
-

Before You Start: What You Need

Please complete all of the following before the session.

1. A ChatGPT Account (free is fine)

- Open your browser and go to chatgpt.com.
- Click Sign In or Sign Up (or Continue with Google).
- Click New Chat and keep the tab open.

2. The Sample Transcript

This is the sample meeting transcript you will use for both the Asana project and the Gamma deck. Download it to your computer first.

- Open the [W Q1 - RevenueReview - MeetingNotes - SampleData.docx](#) .
- Click File → Download → Microsoft Word (.docx).
- Remember where it saves — you will upload it later.

3. An Asana Account (free plan is enough)

- Go to asana.com and click Get Started for free (or Log In).
- Finish the quick setup, then close the tab — ChatGPT will handle the rest.

4. A Gamma Account (free plan is enough)

- Go to gamma.app and click Get Started (or Sign In).
 - Finish the quick setup, then close the tab — ChatGPT will handle the rest.
-

Part 1: Build Your Portable Slide Skill

Important: In this workbook, a “Skill” is a reusable instruction file—not a native installed ChatGPT feature. You will create SLIDE_SKILL.md, save it as a Google Doc, and attach it whenever you want ChatGPT to follow the same presentation standards.

Step 1.1 - Copy the Skill Creator template

Open the Skill Creator template on GitHub:

<https://github.com/anthropics/skills/blob/main/skills/skill-creator/SKILL.md>. Copy the complete template, then open a new ChatGPT chat and paste it there.

skills / skills / skill-creator / SKILL.md

zack-anthropic skill-creator: drop ANTHROPIC_API_KEY requirement from description op... b0cbd3d · 6 months ago History

Preview Code Blame 485 Lines (327 loc) · 32.4 KB

Copy raw file

Raw

name	skill-creator
description	Create new skills, modify and improve existing skills, and measure skill performance. Use when users want to create a skill from scratch, edit, or optimize an existing skill, run evals to test a skill, benchmark skill performance with variance analysis, or optimize a skill's description for better triggering accuracy.

Skill Creator

A skill for creating new skills and iteratively improving them.

At a high level, the process of creating a skill goes like this:

- Decide what you want the skill to do and roughly how it should do it
- Write a draft of the skill
- Create a few test prompts and run claude-with-access-to-the-skill on them
- Help the user evaluate the results both qualitatively and quantitatively
 - While the runs happen in the background, draft some quantitative evals if there aren't any (if there are some, you can either use as is or modify if you feel something needs to change about them). Then explain them to the user (or if they already existed, explain the ones that already exist)

Step 1.2 - Ask ChatGPT to create your portable Skill file

After pasting the Skill Creator template, copy the entire prompt box below into the same chat and press Enter.

Paste this after the Skill Creator template:

Use the Skill Creator template pasted above to create a complete portable skill file called SLIDE_SKILL.md.

Rewrite the template into a production-ready Markdown instruction file. Return only the final contents of SLIDE_SKILL.md in one Markdown code block so I can copy it.

SKILL NAME

Slide Skill

PURPOSE

Turn a meeting transcript, meeting notes or a meeting summary into a VP-ready presentation using the connected Gamma plugin. The skill must apply the same deck-quality and brand standards every time.

WHEN TO USE THIS SKILL

Use this skill whenever I ask you to create, build, draft or revise a leadership presentation, business-review deck or post-meeting deck from a transcript, notes or summary.

EXPECTED INPUT

A meeting transcript, notes or summary containing available numbers, names, dates, targets, decisions, risks and action items.

REQUIRED WORKFLOW

1. Read the complete source before taking action.
2. Extract the business context, metrics, targets, changes, causes, decisions, risks, owners and deadlines.
3. Flag missing information instead of inventing it.
4. Create a slide-by-slide brief that follows every standard below.
5. Use the connected Gamma plugin to build the presentation.
6. Ask for approval immediately before Gamma performs an external action, if approval is required.
7. Return the Gamma link and a short quality-check summary.

DECK-QUALITY STANDARDS

1. Use this slide spine. Skip a section only when the source genuinely contains nothing relevant; never add filler:
 - 1) Title — deck title, date and presenter
 - 2) The Bottom Line — verdict in no more than three bullets
 - 3) Context — what the deck covers in one or two lines
 - 4) Results vs. Target — headline metrics against target or prior period
 - 5) What Is Working / What Is Not — each point stated as a claim
 - 6) Why — root causes
 - 7) Actions and Owners — action, owner and deadline
 - 8) Asks — decisions or support needed from leadership
 - 9) Next Steps and Timeline
 - 10) Summary — owners and deadlines table
2. Produce 8–12 slides and never exceed 12. Consolidate when the content is thin.
3. Put exactly one central idea on each slide.
4. Use assertion headlines. Every slide title must communicate its takeaway as a claim and include the relevant number when available. Use “SMB conversion fell from 34% to 22% in Q1,” not “SMB Numbers.”
5. Support every claim with a number, named example or other evidence from the source.
6. Use no more than five bullets per slide and approximately 12 words per bullet. Avoid paragraphs and preserve white space.
7. Write for a VP: direct, decision-first, specific and free of filler or hedging.

8. Present every metric against its target or prior period and state the delta.
9. Do not create “Thank you,” “Questions?” or unnecessary agenda slides.
10. Never fabricate a number, owner, deadline, claim or source. Clearly flag what is missing.

BRAND — APPLY TO EVERY DECK

- Company: Meridian
- Primary colour: deep navy (#1B2A4A) for titles and structure
- Accent colour: warm amber (#E8A33D) for key numbers and takeaways
- Font: a clean modern sans-serif such as Inter
- Footer: “Meridian — Confidential”
- Title-slide tagline: “Clarity. Momentum. Results.”
- Overall style: minimal, executive, spacious and not playful

FINAL INSTRUCTION

Create SLIDE_SKILL.md now. Do not attempt to install it or use native Skill Creator tools. If an implementation detail is missing, choose the best default for a senior-leadership business-review deck and continue. Return only the final Markdown file in one code block.

Step 1.3 - Review and save SLIDE_SKILL.md

If ChatGPT asks a question, reply: “Use the specification as given, choose the best defaults, and generate the complete SLIDE_SKILL.md now.”

ChatGPT will generate the complete contents of your portable Slide Skill file.

- Review the skill name, purpose, trigger, workflow and deck rules. Confirm that it includes the Gamma plugin workflow and every Meridian brand requirement.
- Copy the complete Markdown response. Open a new Google Doc, paste the copied response into it, and rename the Google Doc exactly: SLIDE_SKILL.md.
- Confirm that the Google Doc is named SLIDE_SKILL.md, save it in Google Drive, and keep it ready for Part 3.

Sample Output:  Slide.skill.md

Note: “Meridian” is a sample brand so everyone in the breakout builds the same thing. After the session, you can rebuild this Skill with your own company name, colours, font, and tagline.

Part 2: Connect the Asana and Gamma Plugins

Before ChatGPT can create work in Asana and Gamma, install their plugins and connect your accounts. This is a one-time setup.

2.1 Connect Asana

1. In the ChatGPT sidebar, click Plugins to open the Plugin Directory.

2. Use the search bar in the Plugin Directory.

3. In the search bar, type Asana and press Enter.

4. Open the Asana plugin, click Install plugin, and then click Connect when prompted. Sign in to Asana and review the requested permissions before selecting Allow.
5. Come back to ChatGPT. Asana should now show as Connected.

Asana is now connected. Move on to Gamma below.

2.2 Connect Gamma

1. Return to Plugins and open the Plugin Directory again.
2. In the search bar, type Gamma and press Enter.

3. Open the Gamma plugin, click Install plugin, and then click Connect when prompted. Sign in to Gamma and review the requested permissions before selecting Allow.

4. Come back to ChatGPT. Gamma should now show as Connected.

Both plugins are connected. Open a new ChatGPT chat for the workflow.

Part 3: Run the Workflow

Do all of the following in one new ChatGPT chat. Uploading the portable Slide Skill file makes its rules available in this conversation.

Step 3.1 - Upload the Skill file and transcript

1. Click the attachment icon and attach both files: select the SLIDE_SKILL.md Google Doc from Google Drive, then upload the Sample Data document you downloaded.
2. Then type or paste the prompt below and press Enter.

Prompt:

Read the attached SLIDE_SKILL.md and treat it as the governing instruction set for this conversation. Follow every rule in it whenever you analyse the transcript or build a presentation. Also read the attached sample meeting transcript completely. Confirm that the Slide Skill is active, then give me a concise summary of the topics, people, important metrics and action items. Do not take any external action yet, and flag anything that is unclear.

Read ChatGPT's summary. If anything is wrong or missing, correct it before moving on.

Step 3.2 - Create the Asana task board

1. In the same chat, type or paste the prompt below and press Enter.

Prompt:

Use the Asana plugin to create a project called 'Q1 Revenue Review — Action Items'. Read the meeting transcript carefully and create every action item as a task. Group the tasks into these six sections: Enterprise Deals, SMB Recovery, South Pipeline, North Expansion, Training & Team, and Process & Reporting. Add the owner named in the notes, the stated due date, and a High, Medium, or Low priority. If a named person is not a member of my Asana workspace, assign the task to me and include the intended owner's name at the start of the task description. Ask for my approval immediately before creating anything in Asana. After the project is created, give me the direct clickable link to the Asana project in your final response.

2. Review ChatGPT's proposed actions and approve the Asana action when prompted. When it finishes, open the project in Asana and confirm that the sections, tasks, assignees, due dates and priorities are present.

the SLIDE_SKILL.md file you activated in Step 3.1.

1. Type or paste the prompt below and press Enter.

Prompt:

Use the attached and activated SLIDE_SKILL.md and the Gamma plugin to build a post-meeting presentation for senior leadership. Follow every rule in the Slide Skill: the slide spine, assertion headlines with the number in the title, one idea per slide, 8–12 slides, evidence behind every claim, the density limits and a direct VP-ready tone. Apply the full Meridian brand: deep navy and warm amber, the “Meridian — Confidential” footer, and the “Clarity. Momentum. Results.” tagline on the title slide.

Use the exact numbers and names from the notes: Q1 target 2.4Cr, actual 1.97Cr (an 18% miss); the three main problems (enterprise deals stuck, SMB conversion fell from 34% to 22%, South region underperformed); immediate actions on TechNova, GlobalEdge, and Horizon Fintech; the SMB and South recovery plans; the process fixes; a Q2 target of 2.8Cr with a 3Cr stretch goal; and a final summary slide listing every owner and deadline.

Review the proposed Gamma action and approve it when prompted. Wait for ChatGPT to return the Gamma link, then click Edit in Gamma to open the deck.

Look at the result and compare it to a default deck: the titles are statements, not labels; every slide has a number or a name; it's 8–12 tight slides; and it carries the navy + amber Meridian brand and footer. That jump in quality came from your Slide Skill.

You're Done!

Here is what you accomplished:

- You authored a reusable portable Slide Skill file that encodes a professional deck standard and your brand.
- ChatGPT built a fully organised Asana project—tasks, owners, due dates and priorities—through the Asana plugin.
- ChatGPT built a VP-ready, on-brand Gamma deck through the Gamma plugin and your attached Slide Skill file—without you building the slides manually.

In one connected workflow, the Asana and Gamma plugins completed work in your real tools, while the attached Slide Skill file kept the deck consistent with your quality and brand standards.

Quick Tips

- Name the plugin in the prompt - say “using the Asana plugin” / “using the Gamma plugin” so ChatGPT picks the right tool.
- Keep the workflow in one chat after uploading both files. To reuse the Slide Skill in a future chat, attach the same SLIDE_SKILL.md with the new meeting notes and activate it again.
- If the deck breaks a rule, point to the exact standard: “Rebuild the deck - the titles must be assertion headlines with the number in them, per the Slide Skill.”
- If the deck has too few slides, say: “Add the missing slides so it follows the full slide spine in the Slide Skill.”
- Make it yours (after the session): rebuild the Slide Skill with your own company name, two brand colours, font, footer, and tagline.

- Reuse it: for your next meeting, upload SLIDE_SKILL.md with the new transcript or notes, activate it, and say, “Build the deck using the attached Slide Skill.”

Post Session

AIAP Cohort - Workbook

MCP Connectors + Skills in Action: Asana + Gamma + Your Own Slide Skill

Demo Video for reference: 📺 MCP Workbook(Skills-Asana-Gamma).mp4

What You Will Achieve by the End

- A reusable Slide Skill - a SKILL.md you create with Claude that you can use for every future meeting.
 - Asana and Gamma connected to Claude.ai.
 - A live Asana project built from raw notes - tasks, owners, due dates, and priorities, all automatic.
 - A VP-ready, on-brand Gamma deck built through your Slide Skill - same quality bar, same brand, every run.
-

Before You Start: What You Need

Please complete all of the following before the session.

1. A Claude.ai Account (free is fine)

- Open your browser and go to claude.ai.
- Click Sign In or Sign Up (or Continue with Google).
- Click New Chat and keep the tab open.

2. The Sample Document

This is the meeting-notes file you will use in the activity. Download it to your computer first.

- Open the [Sample Data document](#).
- Click File → Download → Microsoft Word (.docx).
- Remember where it saves — you will upload it later.

3. An Asana Account (free plan is enough)

- Go to asana.com and click Get Started for free (or Log In).
- Finish the quick setup, then close the tab — Claude will handle the rest.

4. A Gamma Account (free plan is enough)

- Go to gamma.app and click Get Started (or Sign In).
 - Finish the quick setup, then close the tab — Claude will handle the rest.
-

Part 1: Build Your Slide Skill

Important: Do this in a new chat, and keep this same chat open for the whole activity. Parts 2 and 3 happen in this same conversation - the deck step at the end reuses the Slide Skill you build right now.

Step 1.1 - Open a new chat

Open claude.ai and start a New Chat.

Step 1.2 - Ask Claude to build the Skill

Copy the entire block below, paste it into the chat, and press Enter.

Paste this into Claude:

I want to create a new skill using your built-in Skill Creator.

Skill name: Slide Skill

What it does: Take meeting notes or a meeting summary and produce a brief to build a senior-leadership (VP-ready) presentation using the Gamma connector. The skill must enforce BOTH a deck-quality standard AND a brand, every time.

DECK-QUALITY STANDARDS (always apply):

1. Slide spine - use this order; skip a section only if the notes truly have nothing for it, never pad:
 - 1) Title slide - deck title, date, presenter line
 - 2) The Bottom Line - the verdict in 3 bullets max, up front
 - 3) Context - what this deck covers, in 1-2 lines
 - 4) Results vs. Target - the headline numbers, each shown against its target or prior period
 - 5) What's Working / What's Not - each point stated as a claim
 - 6) Why - the root causes
 - 7) Actions & Owners - what we are doing, who owns it, by when
 - 8) Asks - decisions or help needed from leadership
 - 9) Next Steps & Timeline
 - 10) Summary - a table of owners and deadlines
2. Slide count: 8-12 slides. Never exceed 12. If content is thin, consolidate.
3. One idea per slide - each slide makes exactly one point.
4. Assertion headlines (the most important rule): the slide TITLE states the takeaway as a claim with the number in it - e.g. "SMB conversion fell from 34% to 22% in Q1" - NOT a topic label like "SMB Numbers".
5. Evidence on every slide: every claim is backed by a specific number or name taken from the notes. Never write vague lines like "results improved" - say by how much.
6. Density limits: max 5 bullets per slide; max ~12 words per bullet; no paragraphs; favour white space.
7. Tone: written for a VP - direct, decision-first, no hedging, no filler.
8. Data framing: always present a metric against its target or prior period and state the delta (e.g. "1.97Cr vs 2.4Cr target - 18% miss").
9. No filler slides - no "Thank you", "Questions?", or agenda-of-the-agenda.
10. If a needed number is missing from the notes, flag it rather than invent it.

BRAND (apply on every deck - this is a sample brand; treat it as fixed for now):

- Company name: Meridian
- Primary colour: deep navy (#1B2A4A) - use for titles and structure
- Accent colour: warm amber (#E8A33D) - use to highlight key numbers/takeaways

- Font: a clean, modern sans-serif (e.g. Inter)
- Footer on every slide: "Meridian - Confidential"
- Title-slide tagline: "Clarity. Momentum. Results."
- Overall look: minimal, lots of white space, executive, not playful.

INPUT the skill expects: meeting notes or a summary with numbers, names, dates.

OUTPUT the skill produces: a clear instruction to build the deck via the Gamma connector that (a) follows the slide spine, (b) obeys every standard above, and (c) applies the Meridian brand - including telling Gamma the colour scheme (navy + amber), the font style, the footer, and the tagline.

Please draft a complete SKILL.md for this. If you need any details, assume the best default for a business leadership-update deck and proceed.

Step 1.3 - Answer any questions, then save the Skill

If Claude asks a question, reply: "Use the spec as given - best defaults."

Claude will then draft a complete SKILL.md for your Slide Skill, right in the chat.

- If you see a Download button (for the .md file), click it to keep the file — you will reuse this for future meetings.
- If you also see a Save skill button, click it to install the Skill (nice to have, not required).
- If you don't see those buttons, that's fine — the Skill now lives in this chat. Keep this chat open and the deck step in Part 3 will use it.

Want to test it against some sample meeting notes, or adjust anything — the brand, the spine order, or the quality rules?

slide-skill
Skill

Save skill

Note: "Meridian" is a sample brand so everyone in the breakout builds the same thing. After the session, you can rebuild this Skill with your own company name, colours, font, and tagline.

Part 2: Connect Asana and Gamma

Before Claude can build your task board and deck, connect the two tools. This is a one-time setup.

2.1 Connect Asana

1. At the bottom of the chat window, click the small + icon to the left of the text box.

2. A small menu will appear. Click Add connectors.

3. In the search bar, type Asana and press Enter.

4. Click the Asana card, then click Connect. A pop-up opens — sign in to Asana and click Allow.

5. Come back to Claude. Asana should now show as Connected.

Asana is now connected. Move on to Gamma below.

2.2 Connect Gamma

1. In the same Connectors panel, click Connectors → Manage connectors → Browse connectors again.

2. In the search bar, type Gamma and press Enter.

3. Click the Gamma card, then click Connect. A pop-up opens — sign in to Gamma and click Allow.
4. Come back to Claude. Gamma should now show as Connected.

Both connectors are active. Return to the chat from Part 1 for the workflow.

Part 3: Run the Workflow

Do all of the following in the same chat from Part 1 (the one that already has your Slide Skill).

Step 3.1 - Upload the notes and have Claude read them

1. Click the + icon → Add files or photos → upload the [Sample Data](#) document you downloaded.

2. Then type or paste the prompt below and press Enter.

Prompt:

I have attached a document with meeting notes. Please read through the entire document carefully. Understand the key topics discussed, the people mentioned, and all the action items. Do not take any action yet — just confirm what you have understood.

Read Claude's summary. If anything is wrong or missing, tell it now, before moving on.

Step 3.2 - Create the Asana task board

1. In the same chat, type or paste the prompt below and press Enter.

Prompt:

Using the Asana MCP, create a project called 'Q1 Revenue Review — Action Items'. Go through all the notes carefully and add every action item as a task. For each task assign it to the right person (Ravi, Priya, Ankit, Sneha, Karan, or Deepa), add a due date based on what is mentioned in the notes, and mark it High, Medium, or Low priority. Group the tasks into these 6 sections: Enterprise Deals, SMB Recovery, South Pipeline, North Expansion, Training & Team, and Process & Reporting.

2. Click Always allow and wait. When Claude finishes, click Create Project → View in Asana and check your board - tasks organised into sections, with assignees, due dates, and priorities.

Note: Since the team members aren't yet mapped to Asana accounts in your workspace, tasks are assigned to you for now. Once you have their Asana emails, Claude can reassign them all in one go.

Step 3.3 - Build the deck through your Slide Skill

This is the key step. Instead of letting Claude build the deck its own way, you tell it to follow the Slide Skill you built in Part 1.

1. Type or paste the prompt below and press Enter.

Prompt:

Using the Gamma MCP, build a post-meeting presentation for senior leadership. Build it strictly following the Slide Skill we created earlier in this chat — apply every standard (the slide spine, assertion headlines with the number in the title, one idea per slide, 8-12 slides, evidence behind every claim, the density limits, VP tone) AND the full Meridian brand (navy + amber, the “Meridian — Confidential” footer, and the “Clarity. Momentum. Results.” tagline on the title slide).

Use the exact numbers and names from the notes: Q1 target 2.4Cr, actual 1.97Cr (an 18% miss); the three main problems (enterprise deals stuck, SMB conversion fell from 34% to 22%, South region underperformed); immediate actions on TechNova, GlobalEdge, and Horizon Fintech; the SMB and South recovery plans; the process fixes; a Q2 target of 2.8Cr with a 3Cr stretch goal; and a final summary slide listing every owner and deadline.

2. Click Always allow and wait. Claude gives you a direct link - click Edit in Gamma to open your deck.

Look at the result and compare it to a default deck: the titles are statements, not labels; every slide has a number or a name; it's 8–12 tight slides; and it carries the navy + amber Meridian brand and footer. That jump in quality came from your Slide Skill.

You're Done!

Here is what you accomplished:

- You authored a reusable Slide Skill that encodes a professional deck standard and your brand.
- Claude built a fully organised Asana board - tasks, owners, due dates, priorities through the Asana MCP.
- Claude built a VP-ready, on-brand Gamma deck - through the Gamma MCP and your Slide Skill - without you touching a slide.

All in one conversation. The MCP connectors did the work in your real tools; the Slide Skill made sure the output meets your standard, every time.

Quick Tips

- Name the connector in the prompt - say “using the Asana MCP” / “using the Gamma MCP” so Claude picks the right tool.
- Keep everything in one chat - the deck step reuses the Slide Skill you built at the start. A new chat would lose it.
- If the deck breaks a rule, point to the exact standard: “Rebuild the deck - the titles must be assertion headlines with the number in them, per the Slide Skill.”
- If the deck has too few slides, say: “Add the missing slides so it follows the full slide spine in the Slide Skill.”
- Make it yours (after the session): rebuild the Slide Skill with your own company name, two brand colours, font, footer, and tagline.
- Reuse it: next meeting, just upload the new notes and say “Build the deck using my Slide Skill.”
