

Day 11 Office Hours

00:55 - 11:15

Audio shared by Sumedha: [Pre-session music played; lyrics not transcribed.]

11:27 - 11:44

Sumedha: Hello, everyone. Welcome back to your day 11 of AI Accelerator program. This is your office hours. Warm, warm welcome to the session. Very good morning, good afternoon, good evening from wherever you are joining in. How is everyone doing?

11:46 - 11:56

Sumedha: Amazing. I like that so many of you like the songs. We are going to share the playlists with you, so in case you want to maybe listen back to it.

11:58 - 11:59

Sumedha: Amazing

12:00 - 12:10

Sumedha: Alright, so I see the energy is already high in the chat. Without any further ado, we will get started.

12:10 - 12:22

Sumedha: Okay, brain is bursting with possibilities. That is the goal. And I hope that those possibilities become, like, come to life as well very soon. So, yeah.

12:22 - 12:34

Sumedha: With that, today, you already know we are going to start with our hackathon, so I do not want to delay anything, so we will get started quickly with our office hours.

12:34 - 12:38

Sumedha: So, let me quickly put the Slido link in the chat.

12:39 - 12:40

Sumedha: Good evening.

12:42 - 12:55

Sumedha: There you go, in the chat is the Slido link. Drop your questions, and we will take it up on the basis of popularity, so if you like any other question, do, don't forget to upvote it.

12:55 - 13:02

Sumedha: And with that, we will call back in Samrati. Welcome back, Samrati, and I will leave the one hour to you.

13:05 - 13:12

Samruddhi Mokal Outskill: All right, hello everyone. I'll quickly share my screen, and let's get started with the Q&A.

13:12 - 13:17

Samruddhi Mokal Outskill: So Sumedha, I'm not able to share the screen. It's asking me screen share is not on.

13:17 - 13:22

Sumedha: Let me quickly share you the access. Yeah, there you go.

13:22 - 13:23

Samruddhi Mokal Outskill: Okay, yeah.

13:24 - 13:25

Samruddhi Mokal Outskill: Thank you.

13:37 - 13:42

Samruddhi Mokal Outskill: Okay, starting with the first one, I need to create an agent

13:42 - 13:57

Samruddhi Mokal Outskill: which reads emails with the PDF attachments and extracts data into an Excel sheet, which ultimately reconciles with the invoices. Please advise, okay. So whenever you are creating the node in Eniton, En editor has this option if you want to

13:57 - 14:09

Samruddhi Mokal Outskill: get the attachments as well. So just configure the nodes. Whatever nodes you have configured in your GRI, if you go to more options or filters, each of those nodes can be further customized for your use case. So just add all of those,

14:10 - 14:17

Samruddhi Mokal Outskill: required filters or options, and then you'll be able to extract out the data. Once it is extracted from the PDFs.

14:17 - 14:22

Samruddhi Mokal Outskill: pass it on to the Excel sheet, like how you have created your Excel sheet node, and

14:23 - 14:42

Samruddhi Mokal Outskill: For invoices, whatever data you're getting in the Excel sheet, and whatever software or tool you're using to create the invoice, or if you want to create invoice links, those softwares are going to have their own API keys. Use the required API keys in the workflows, required API keys and required API endpoints, for example,

14:42 - 14:48

Samruddhi Mokal Outskill: Creating the invoice is going to be one EPA endpoint, another is going to be to check if the invoice has been paid or not.

14:49 - 14:52

Samruddhi Mokal Outskill: So use the right API endpoints and create the workflows on top of it.

14:57 - 15:09

Samruddhi Mokal Outskill: I have built my assistant through N10 and started using it, but how to do the below? First, how to add voice command instead of text message. Second, when I'm asking.

15:10 - 15:19

Samruddhi Mokal Outskill: Okay, I'm assuming this is IRA to send emails. It's asking for email ID always. How do I give it my live contacts? Okay. So for the...

15:35 - 15:37

Samruddhi Mokal Outskill: Your voice inputs.

15:40 - 15:43

Samruddhi Mokal Outskill: Okay, I think this is going to have that.

15:45 - 15:45

Samruddhi Mokal Outskill: Yep.

15:47 - 15:48

Samruddhi Mokal Outskill: So, filter out the...

15:49 - 15:54

Samruddhi Mokal Outskill: text that you're getting, or the message that you're getting, whether it's text or audio. If it is audio.

15:56 - 16:14

Samruddhi Mokal Outskill: Okay. I'll repeat it again, if you guys lost me. So, first is, answering to your first question, how to get your voice commands. So, select a tool that is going to take your inputs through voice commands, whether it's Telegram, whether it's WhatsApp, or any other tool that you can think that you can send your audio message to.

16:14 - 16:18

Samruddhi Mokal Outskill: So replace it with that node, that trigger node.

16:18 - 16:26

Samruddhi Mokal Outskill: You can also have multiple triggers in Enitance, so you can take your inputs from WhatsApp, from your NITM's chat trigger node, or any other trigger that you want.

16:27 - 16:29

Samruddhi Mokal Outskill: So you can set up multiple triggers.

16:29 - 16:35

Samruddhi Mokal Outskill: And further, add a classification step, which is going to identify if this is a text or audio.

16:35 - 16:50

Samruddhi Mokal Outskill: If it is an audio, it will get the file, it will transcribe the file, and then pass it on to the AI agent. This step is important because if you directly pass on the audio file to AI agent, your AI agent will take a very huge amount of credits.

16:51 - 16:54

Samruddhi Mokal Outskill: To analyze the recording of your audio.

16:54 - 17:00

Samruddhi Mokal Outskill: So, convert that audio file into text, and pass on that text to your AI agent. That will save you a lot of cost.

17:00 - 17:02

Samruddhi Mokal Outskill: And for the rest of the workflow, remain same.

17:04 - 17:06

Samruddhi Mokal Outskill: Now, the second question.

17:07 - 17:22

Samruddhi Mokal Outskill: When I'm asking Ira to send emails, it's asking for email IDs always. So if you have your live contacts already saved in Google Contacts, you can add that node. I will show you, yeah. So this is Jarvis. Jarvis has access to its contacts as well.

17:22 - 17:27

Samruddhi Mokal Outskill: So if your everything is stored in Google Contacts, give it access to Google Contacts.

17:27 - 17:29

Samruddhi Mokal Outskill: And further, you can also, while sending.

17:30 - 17:37

Samruddhi Mokal Outskill: You can also add more filters or more options, whatever you want, and it will fetch the required details and send it back to you.

17:41 - 17:55

Samruddhi Mokal Outskill: Please, whenever you recommend a more obscure alternative website that you like, could you always drop the link? The closed captions are not accurate when spelling things. Yeah, sure. Also, I have created the website that I

17:55 - 18:04

Samruddhi Mokal Outskill: told you guys about the tools. I'll just show that quick demo of that. I won't be able to go through the entire website, but I'll quickly skim through it, because it has a lot of tools.

18:08 - 18:11

Samruddhi Mokal Outskill: I'll also share the link of this in the chats.

18:17 - 18:17

Samruddhi Mokal Outskill: Yep.

18:19 - 18:20

Samruddhi Mokal Outskill: Here's the link.

18:22 - 18:31

Samruddhi Mokal Outskill: So this is about... these are all the categories. You can select what category you want, and you'll be able to see what tools or what websites you should go to.

18:31 - 18:39

Samruddhi Mokal Outskill: So, Notebook LM, you guys know Perplexity Manus, LLM Architecture, Chad Assistance, ChatGPT, Claude, Gemini, Grok.

18:39 - 18:43

Samruddhi Mokal Outskill: Now, model access and infrastructure, you guys already know open router?

18:44 - 18:54

Samruddhi Mokal Outskill: You know FAL AI, you know Hicksfield. Coming to Grok, this is not the GROK that is, XAI's model, this is Grok, G-R-O-Q.

18:56 - 19:00

Samruddhi Mokal Outskill: Okay, I did a mistake in typing, G-R-O-Q.

19:00 - 19:01

Samruddhi Mokal Outskill: Yep.

19:02 - 19:15

Samruddhi Mokal Outskill: So Grok is going to provide you... think of Grok similar to Open Router, but Grok provides you free credits every day. So you can check out Grok and get Grok's API key, so N10 also has a Grok node, if I search for Grok.

19:16 - 19:18

Samruddhi Mokal Outskill: There is a BrockChat model node.

19:18 - 19:23

Samruddhi Mokal Outskill: So, similar to Open Router, you can select Grok and start using the models that are there in Grok.

19:24 - 19:28

Samruddhi Mokal Outskill: Now, coming to scraping, I have already mentioned about Amplify.

19:28 - 19:31

Samruddhi Mokal Outskill: If not, Appify is a marketplace of scrapers.

19:32 - 19:52

Samruddhi Mokal Outskill: There are a lot of hundreds of different scrapers, honestly, thousands of different scrapers that are available on Appify. Select your use case, and Appify will give you multiple options. How to select the right one from Appify is two things. You'll be able to see how many people are using that scraper, and second, you'll be able to see the rating of that scraper. So select the one which has the highest.

19:52 - 19:57

Samruddhi Mokal Outskill: And especially for social media scraping, you'll be able to find one option that is

19:57 - 20:00

Samruddhi Mokal Outskill: This paper do not use... does not use cookies.

20:00 - 20:08

Samruddhi Mokal Outskill: So go with the scrapers that do not use cookies, reason being, if you scrape, it will... if you scrape with the ones which use cookies.

20:09 - 20:26

Samruddhi Mokal Outskill: there are chances that it might block your social media, because it knows that you are the one scraping it. So, cookies is something like a text file your browser, etc. stored. So, it tells the browser that this is you that is taking that action. So, for example, every time you log in, once you're logged in.

20:26 - 20:41

Samruddhi Mokal Outskill: By default, it is stored somewhere. And next time you just select that website, you get automatically logged in. That is stored somewhere. So similarly, cookies are stored, and it helps the other website identify it is you. To avoid that, do not use the ones which have the cookies options.

20:41 - 20:44

Samruddhi Mokal Outskill: This is for image generation.

20:44 - 20:48

Samruddhi Mokal Outskill: This is audio and, voice. This is for voice agents.

20:49 - 21:07

Samruddhi Mokal Outskill: Now, coming to the voice agents, a lot of you also asked about how to get Indian phone numbers. So, Bonla and other Indian providers are there, for example, Ring, etc. So, these are the platforms where you can build voice agents, similar to retail or WAPI, but specifically for India. Wabi's is...

21:10 - 21:13

Samruddhi Mokal Outskill: Especially a provider for your

21:13 - 21:31

Samruddhi Mokal Outskill: numbers. So you can get multiple numbers, including Indian phone numbers, with starting with plus 91. So you can check out Wobbies. It has a lot of integrations available, that is, WAPI, 11 Labs, Retail, Bulna, etc, etc. So you can check out Wobbies for getting Indian numbers.

21:34 - 21:38

Samruddhi Mokal Outskill: Okay, then automations and workflow, this is already covered.

21:39 - 21:46

Samruddhi Mokal Outskill: AI App Builders, lovable, bold, Replit... yes, coming to Base44, if you're specially creating mobile apps.

21:47 - 22:05

Samruddhi Mokal Outskill: Base44 is... is your go-to, reason being, Base44 has inbuilt integrations with the App Store and Play Store, and App Store and Play Store have strict guidelines about how the coding should be done, how the app should be built, so Base44 follows all of these guidelines, and it gets very easy for you to publish that.

22:06 - 22:14

Samruddhi Mokal Outskill: Coming to coding assistance, alright, this is covered, this is covered, sales intelligence, This is also covered.

22:16 - 22:31

Samruddhi Mokal Outskill: For cold outreach, you can test out instantly, like, it will do email warm-ups for you, it will send out cold emails, it will keep a track of all the emails being opened, links being opened on... on the mails that you're sending. It will also create a follow-up sequence.

22:31 - 22:34

Samruddhi Mokal Outskill: So Instantly and smartly are similar.

22:37 - 22:41

Samruddhi Mokal Outskill: Social media, yes. Also, for social media, check out Phantom Buster.

22:41 - 22:53

Samruddhi Mokal Outskill: So how NATN, you can create a lot of workflows? Similarly, Phantom Buster, you can create specially workflows for social media automations. What happens if you create workflows with NHN, especially for social media, is...

22:53 - 23:09

Samruddhi Mokal Outskill: Social media keeps track of bot activities, and they might block your accounts. So Phantom Buster is specially built for that, so you can check out different workflows that are there here. So let's try this one. So, for example, if you want to do LinkedIn cold outreach.

23:10 - 23:16

Samruddhi Mokal Outskill: So there are workflows already built on Phantom Buster, and you can check out those workflows from here.

23:17 - 23:22

Samruddhi Mokal Outskill: So it has Instagram, Twitter, HubSpot, handling them

23:22 - 23:26

Samruddhi Mokal Outskill: So, extract leads from LinkedIn posts, connect and send follow-up messages.

23:27 - 23:30

Samruddhi Mokal Outskill: LinkedIn Search Export, there are a lot of it, you guys can check it out later.

23:34 - 23:47

Samruddhi Mokal Outskill: This is for meeting notes, this is covered. Presentation Gamma, I think all of you guys know what is Gamma. This is whiteboard and diagramming. Niro is my personal go-to. Then backend, you guys know SuperBase, Firebase.

23:47 - 23:54

Samruddhi Mokal Outskill: Pinecone especially for vector database. Superbase also has both of those, that is vector database as well as normal database.

23:54 - 24:04

Samruddhi Mokal Outskill: Payments, these are the ones you can check out. Stripe, Razorpay, then deploying and hosting. Versil. Versil, you guys yesterday saw already. Similar is Netlify.

24:05 - 24:17

Samruddhi Mokal Outskill: For GPUs and compute. So, I have already mentioned RunPod, but if not, I am showing this RunPod again. So, let's say if you're running models locally, and your laptop is not able to take that

24:18 - 24:24

Samruddhi Mokal Outskill: that much load. So what you can do is, you can rent your servers or GPUs on Runboard.

24:25 - 24:33

Samruddhi Mokal Outskill: And in this, the main advantage is Rentport gives you hourly pricing. So I can rent this GPU only for the amount of time that I want.

24:34 - 24:42

Samruddhi Mokal Outskill: So, only for the amount of time there where you want to run the models, get the GPUs, required GPUs or pods from RunPod, and you can run those models on RunPod.

24:44 - 24:51

Samruddhi Mokal Outskill: This is for MCPs and skills, so this is a library of MCPs and skills. This is for AI security and code review.

24:53 - 25:01

Samruddhi Mokal Outskill: Ai memory, so if you want to add a memory layer on top of everything that you're doing, so Mem0, super memory, and memory.

25:01 - 25:17

Samruddhi Mokal Outskill: So, Mem0 and SuperMemory are going to take a good amount of configuration effort from your side. Memory is my personal go-to. Memory resides in... I personally use Memory. Memory has integrations to everything that is there, including... it has around 1,000 plus integrations to different apps.

25:17 - 25:33

Samruddhi Mokal Outskill: You can add multiple Gmail accounts, multiple calendars, etc. to memory, and I can send it message from my WhatsApp, including audio message. It also has understanding of multiple languages. I sometimes talk to it in different languages as well. So that is my personal go-to, memory.

25:33 - 25:36

Samruddhi Mokal Outskill: Of... this is communities.

25:37 - 25:42

Samruddhi Mokal Outskill: So if you want to discover communities, etc, you can check out this one. And coming to Join Secret.

25:44 - 25:47

Samruddhi Mokal Outskill: So, JoinSecret is where you can get free credits.

25:47 - 26:03

Samruddhi Mokal Outskill: This is not unlimited free credits, but you can get some free credits from here. So you can go to deals, and you can see what type of deals you want. For example, if I go here for Imagine, they have 20% off, so you can get coupon codes and free credits from this website.

26:08 - 26:14

Samruddhi Mokal Outskill: For accelerators and fellowship, you can try out, if you're creating a product, you can try applying here to get funding, etc.

26:15 - 26:26

Samruddhi Mokal Outskill: And this is especially for grants. So, when you go for funding, you usually have different types of funding, for example, Debt funding, equity funding, etc. And grants is something, if people believe in you, they have

26:27 - 26:35

Samruddhi Mokal Outskill: They give you money where they are not expecting anything much in return from you. So this is for grants, you can check out what grants are available for what,

26:36 - 26:39

Samruddhi Mokal Outskill: What type of companies or what type of products?

26:42 - 26:48

Samruddhi Mokal Outskill: This is autonomous Agents, and yes, this is the list of GitHub repos, which has a lot of

26:48 - 26:52

Samruddhi Mokal Outskill: Lot of different things, which you guys can check it out. I have dropped the link.

26:52 - 27:01

Samruddhi Mokal Outskill: In the chat. I'm still working on it, I'll try to add a few more things in this, but you can still check this out. This is the basic version of it right now.

27:03 - 27:05

Samruddhi Mokal Outskill: I'm dropping the link again, here's the link.

27:08 - 27:12

Samruddhi Mokal Outskill: Okay, alright, getting back to the Q&A.

27:15 - 27:20

Samruddhi Mokal Outskill: How do you copy everything within a sticky note within anything? Alright...

27:21 - 27:23

Samruddhi Mokal Outskill: So when you double-click on this.

27:25 - 27:31

Samruddhi Mokal Outskill: It will open the sticky note, and you can just use normal your keyboard operations to copy-paste it.

27:36 - 27:51

Samruddhi Mokal Outskill: How does anti-gravity connect to various NN trigger... various triggers in NN? Also, you cannot directly connect anti-gravity to NN. Anti-gravity is a white coding tool, NATN is an automation tool, so both of them are not connected. If you want to

27:51 - 28:01

Samruddhi Mokal Outskill: create a frontend on anti-gravity and connect that to NN, then you will have to use NHN's MCP server. Get the MCP server URL from your NN and connect that MCP to your anti-gravity.

28:05 - 28:22

Samruddhi Mokal Outskill: There is also something called Apache License. How is that different from MIT or GPL? Okay, so Apache is similar to MIT. Keep GPL aside. GPL, if you want to commercialize something, GPL is of no use. You have to open source everything with GPL. So, you guys know what MIT is. You can take

28:22 - 28:26

Samruddhi Mokal Outskill: product built with MIT, and you can build on top of it, and you can commercialize it.

28:27 - 28:29

Samruddhi Mokal Outskill: Apache is something similar.

28:31 - 28:42

Samruddhi Mokal Outskill: But let's take, let's take one apart from tech examples, so a normal... I'll try to explain it in simple English. Let's say you're borrowing a robot from your friend.

28:43 - 28:50

Samruddhi Mokal Outskill: with MIT, Your friend says, You have access to my robot, you can do whatever you want.

28:52 - 28:56

Samruddhi Mokal Outskill: And with Apache, Your friend says.

28:57 - 29:04

Samruddhi Mokal Outskill: You have access to my robot, and you have access to my secret, what makes it walk or do specific actions.

29:04 - 29:22

Samruddhi Mokal Outskill: So you have access to both of those, but with MIT, it is not specially mentioned. Can you do that with MIT? Yes, you can do that, but there are chances that if you go in a legal direction, the person owning the MIT license can sue you, but if there is Apache license, by default, you have their, secret sauce.

29:22 - 29:25

Samruddhi Mokal Outskill: So that is the difference between MIT and Apache.

29:29 - 29:45

Samruddhi Mokal Outskill: What is the best way to automate increasing your digital presence on LinkedIn? Auto content writing, auto-scheduled posting, and getting more coverage. So for... especially if you want to go with LinkedIn, I'll say, check out Phantom Buster, because for LinkedIn or social media, you have to

29:45 - 29:59

Samruddhi Mokal Outskill: do some commenting as well, initially. Can you do the post generation? Yes, definitely you can do the post generation, but especially for commenting, sending requests to the right people, check out Phantom Buster. There are already created workflows in Phantom Buster, and select the right one for you.

30:03 - 30:16

Samruddhi Mokal Outskill: Which tools do you recommend for creating a workflow that can either use my laptop, which is my desktop, or a local setup that uses a Mac Mini, or a Blackmagic graphics accelerator instead of using my laptop? I use the whole system to connect via

30:16 - 30:26

Samruddhi Mokal Outskill: I want the whole system to connect via NATN or MCPs, or SuperBase, etc, etc. So my best, suggestion for this is going to be download local,

30:26 - 30:39

Samruddhi Mokal Outskill: ChatGPT, Codex, or desktop version of Claude. Both of them have desktop use and browser use. If you give them action points, if you give them prompt, they have access to your rest of the things, and they can take actions on your behalf.

30:40 - 30:44

Samruddhi Mokal Outskill: And, AND, etc, you can connect those with the MCP servers.

30:46 - 30:48

Samruddhi Mokal Outskill: To your answer on HeeGen.

30:49 - 31:01

Samruddhi Mokal Outskill: In video gen field, do I select all avatars while creating it? Will the AI select the right avatar on its own? So the AI will not select the right avatar on its own, and you will have to create multiple avatars, you cannot just

31:01 - 31:15

Samruddhi Mokal Outskill: select one field and create multiple avatars. You will have to record separate video for separate avatars. For example, in one, you are standing and you are very expressive. In the second avatar, you are sitting more in a neutral tone.

31:16 - 31:20

Samruddhi Mokal Outskill: So, both of these are going to have separate voice ID and separate video ID.

31:21 - 31:28

Samruddhi Mokal Outskill: So you'll have to follow the same process that you will follow for creating one avatar for multiple avatars, or multiple tonings, body language, etc.

31:30 - 31:39

Samruddhi Mokal Outskill: And, will the AI select the right avatar? No, you will have to select the right avatar when you're creating the NAT and workflow, based on the use case, based on the situation.

31:44 - 31:52

Samruddhi Mokal Outskill: Ran out of credits in anti-gravity. Is there a better way to optimize this? Can I carry on the discussion with ChatGPT or Claude to make some changes?

31:52 - 31:56

Samruddhi Mokal Outskill: Then make the MD file and, convergence passed.

31:57 - 32:11

Samruddhi Mokal Outskill: pass it in, anti-gravity. Alright, I'll quickly show how to check your credits in anti-gravity. So, whenever you're using coding agents, and wherever you are able to see that there is a way to check your credits, it's a better choice to keep checking the credits, or else

32:12 - 32:16

Samruddhi Mokal Outskill: You will start consuming a lot of credits, and you won't even understand.

32:17 - 32:20

Samruddhi Mokal Outskill: So I hope my anti-gravity screen is visible now.

32:22 - 32:29

Samruddhi Mokal Outskill: So starting with this, go to Settings at the top here, go to Open Anti-Gravity ID User Settings.

32:30 - 32:31

Samruddhi Mokal Outskill: Go to Models.

32:32 - 32:39

Samruddhi Mokal Outskill: In models, you will be able to see each model quota with weekly remaining limit, hourly remaining limit.

32:39 - 32:45

Samruddhi Mokal Outskill: So, see what is happening where, and then start utilizing those models, or switching them in between.

33:14 - 33:24

Samruddhi Mokal Outskill: Which advertise bonus tools, or subscriptions or plugins can we actually use in each workbook? Please share a task-to-tool list with plan limits and activation periods.

33:24 - 33:37

Samruddhi Mokal Outskill: How will missing or unactivated benefits be fixed during the program, rather than after the guided practice is passed? So this is for Sumedha. I think what you guys have got the tools as part of bonus in your program, so Sumedha will be able to take this up.

33:43 - 33:50

Samruddhi Mokal Outskill: Alright, so in anti-gravity, what is the optimal way to set up multiple project folders? Also.

33:50 - 34:03

Samruddhi Mokal Outskill: How do we create folder structure to allow skills to work across multiple projects, so we don't have to download the same skills multiple times? What resources are available to continue our learning in anti-gravity?

34:06 - 34:14

Samruddhi Mokal Outskill: So starting with what is the optimal way to set up multiple project folders is... the best way is whenever you're trying to create a separate project.

34:14 - 34:16

Samruddhi Mokal Outskill: Create a separate folder for it.

34:17 - 34:35

Samruddhi Mokal Outskill: And, how do we create the folder structure to allow skills? So you can ask it in the prompt. There is something called as global setup, and there is something called as, local or folder level setup. So, try asking it in the prompt itself. I want to set the skill in global level, it will create those skills in global level.

34:36 - 34:43

Samruddhi Mokal Outskill: And about the resources, I'm not sure if the resources are available in your LMS or not. So this is, again, for Sumedha.

34:47 - 34:54

Samruddhi Mokal Outskill: How do we know when to use anti-gravity over using Bolt or Lava built? Okay. So, try to follow this structure.

34:55 - 34:57

Samruddhi Mokal Outskill: Think of it in 3 levels.

34:58 - 35:02

Samruddhi Mokal Outskill: First is, you want a very good-looking, amazing front-end UI UX.

35:03 - 35:10

Samruddhi Mokal Outskill: stick to Lovable. At this point of time, Lovable is very good at creating a very good front-end. Next, if you want a

35:10 - 35:18

Samruddhi Mokal Outskill: decent backend, then go with bolt, or a replicate, or, Google's AI Studio.

35:19 - 35:24

Samruddhi Mokal Outskill: And then, if you want a very, very, very heavy backend, then go with the IDs.

35:24 - 35:37

Samruddhi Mokal Outskill: That is anti-gravity, I personally use Claude Code, but anti-gravity cursor and Claude Code are at the last level, where you want a very, very, very solid structure in both front-end and back-end. But there is also a way to

35:37 - 35:47

Samruddhi Mokal Outskill: convert where you start one thing versus further keep transitioning to other tools. For example, let's say, initially, you just wanted to create a MVP version because

35:47 - 35:56

Samruddhi Mokal Outskill: As you saw, anti-gravity might get complicated for non-coders, so you can create your MVPs on Lovable. When users start actually using it, when you want to

35:57 - 36:00

Samruddhi Mokal Outskill: Navigate further, or create a good backend.

36:00 - 36:02

Samruddhi Mokal Outskill: Connect your lovable to GitHub.

36:03 - 36:10

Samruddhi Mokal Outskill: And then transition, let's say, to your anti-gravity. So lovable's code will be transitioned to anti-gravity, and then anti-gravity will build on top of lovable.

36:11 - 36:21

Samruddhi Mokal Outskill: So just connect your lovable to GitHub, and in anti-gravity, tell that, pull this, my repository from this, this, this link, and it will pull the entire code from your lovable, and then it will build on top of it.

36:26 - 36:34

Samruddhi Mokal Outskill: Best suggestion or AI websites to convert real video shot by a camera and convert into AI video.

36:34 - 36:37

Samruddhi Mokal Outskill: Let's say for improving lighting, background.

36:37 - 36:48

Samruddhi Mokal Outskill: Or to make professional tutorial videos for websites. So if you just want to add changes, you can check out Google Flow. Google Flow also allows you to do editing of the already existing videos.

36:51 - 36:56

Samruddhi Mokal Outskill: How can a non-coder use coding agents to build and maintain tools for small business clients?

36:56 - 36:59

Samruddhi Mokal Outskill: Also, this is a very broad question.

37:00 - 37:04

Samruddhi Mokal Outskill: If you want... if you have a same product that you're selling to multiple clients.

37:05 - 37:15

Samruddhi Mokal Outskill: Create one website, have multiple user authentications, create a superbase in the backend, which will store what each user is doing, what action each user is taking.

37:16 - 37:17

Samruddhi Mokal Outskill: So, one product with

37:18 - 37:33

Samruddhi Mokal Outskill: multiple user accounts, and you can have, let's say, your super admin access, admin access, and then if admin access, let's say if admin access is given to the CEO of the company, you are the super admin who has access to all of these sub-accounts, and then the

37:33 - 37:38

Samruddhi Mokal Outskill: Admin of the company, or the CEO of the company, has the ability to change the permissions

37:38 - 37:57

Samruddhi Mokal Outskill: to the... for the sub-accounts, let's say they're team members, etc. So, add these three layers, and then you can use the same software. While building it, while white coding it itself, you can tell that I want this specific thing added, it will white code on top of it, and you can start using the same link or same web app for multiple small businesses.

38:01 - 38:07

Samruddhi Mokal Outskill: How could I use coding agents within NATENT to build client automation systems faster?

38:07 - 38:09

Samruddhi Mokal Outskill: So there are two ways to do that.

38:09 - 38:14

Samruddhi Mokal Outskill: First is, you can connect your Claude to Claude's MCP,

38:15 - 38:17

Samruddhi Mokal Outskill: to your, sorry, NHN MCP to Claude.

38:17 - 38:21

Samruddhi Mokal Outskill: And second is, NATN has this AI assistant.

38:21 - 38:29

Samruddhi Mokal Outskill: So it also has the ability to create your workflows. But what happens is, if your prompts are not specific, if you just tell it.

38:29 - 38:43

Samruddhi Mokal Outskill: I want to create a customer support agent. Without telling it where the customer support agent exists, without telling where it has to retrieve the data from, for example, Pinecone, for example, Google Sheets, some specific documents, it will create a random workflow.

38:43 - 38:47

Samruddhi Mokal Outskill: So think of it like, give a very specific prompt.

38:47 - 38:53

Samruddhi Mokal Outskill: With specifications about what tools you have to use, what actions you want to take with those specific tools.

38:54 - 38:58

Samruddhi Mokal Outskill: Give the prompt, your AI assistant will create a very good workflow for you.

39:07 - 39:22

Samruddhi Mokal Outskill: I have asked 3 times in doubts for the learning recording for building Jerry Day 7. No one answers. That's the only first portion there from web of speech that morning, but not the learning. Can you please look into this today? So, Sumedha, again, this is, for you.

39:26 - 39:40

Samruddhi Mokal Outskill: If I have a website hosted on domain CX, I have a QR code on my business card to my business site. If I subscribe to a new domain, will the old QR work for my website, or will a new

39:40 - 39:45

Samruddhi Mokal Outskill: QR code be created. Secondly, do you know a provider or trick to create free QR codes?

39:47 - 39:58

Samruddhi Mokal Outskill: Also, to create free QR codes, you can use Lovable itself, like, use Lovable's free credits and create a QR code and do that. Also, coming to your previous question, will it still remain

39:59 - 40:06

Samruddhi Mokal Outskill: your previous website, it depends how you configured your QR code. So, let's say you have created your QR code in Lovable.

40:06 - 40:08

Samruddhi Mokal Outskill: In there itself.

40:09 - 40:23

Samruddhi Mokal Outskill: while... in the next prompt itself, you can tell that, replace my previous website with this new website while scanning the QR code, and it will do that. So I don't know how you created the QR code, but from wherever you created the QR code, you can change what the QR code points to.

40:26 - 40:32

Samruddhi Mokal Outskill: How to get support from mentors in learning or completing on pending workbooks? This is for Sumedha.

40:37 - 40:51

Samruddhi Mokal Outskill: Do we have any AI tools that can easily clone a website we like on the internet? So lovable, bold, all of the white coding tools you saw are very good at cloning, so just give the link of the website, they will go through the entire structure of the website and create a similar product.

40:52 - 40:54

Samruddhi Mokal Outskill: I tried, using Replit for...

40:55 - 41:02

Samruddhi Mokal Outskill: creating similar to... something similar to Spotify, so... yeah, it does very good back-end, front-end, everything, so...

41:06 - 41:10

Samruddhi Mokal Outskill: What is Langchain? What is the use case? So, Langchain premium is similar to NHN.

41:10 - 41:15

Samruddhi Mokal Outskill: So, think of it similar to N10 with nodes, you can create automations, there.

41:18 - 41:34

Samruddhi Mokal Outskill: How did you get so good with the knowledge of AI tools? You seem to know every topic and use cases on AI. How can we, beginners, get better with AI knowledge on top of more practice and testing out various tools? And how can we keep our personal details secure when testing out new tools?

41:35 - 41:44

Samruddhi Mokal Outskill: So how did I get good? That is probably years of experience. Like, I started with AI and ML when GPT was not even there.

41:44 - 41:54

Samruddhi Mokal Outskill: And GPT was just a next word prediction model, is to just, predict what is going to be... it used to complete the sentence or just predict the next word. So probably that is due to experience, and, I think

41:55 - 42:02

Samruddhi Mokal Outskill: joining the right communities or following the right people on the internet. And another is, initially, I started,

42:05 - 42:11

Samruddhi Mokal Outskill: Doing a lot of things, or just randomly learning, what helped me was... Select a use case.

42:12 - 42:15

Samruddhi Mokal Outskill: Try using AI on it, or try automating it.

42:16 - 42:26

Samruddhi Mokal Outskill: Once that task is complete, then shift to a new one, because what initially happened was, I was very overwhelmed, because there are a lot of things you need to know in the AI space.

42:27 - 42:39

Samruddhi Mokal Outskill: So, a lot of your time, energy goes in learning new things, rather than actually creating something tangible. So, start with something that is going to show you immediate impact on your life. That will give you a huge amount of confidence as well, because

42:39 - 42:41

Samruddhi Mokal Outskill: If you just start learning something.

42:42 - 42:45

Samruddhi Mokal Outskill: And you are overwhelmed, you are bound to lose your confidence.

42:46 - 42:49

Samruddhi Mokal Outskill: So stick to a use case, automate it.

42:49 - 42:56

Samruddhi Mokal Outskill: Wipe-code it, whatever you want to do, use AI tools, and then start shifting to new, or start learning more on the tools.

42:58 - 43:11

Samruddhi Mokal Outskill: And how can we keep our personal details secure when testing out new tools? Important thing is, never share your financial details, never share your credit card details. Emails, personal emails, etc. are fine.

43:12 - 43:24

Samruddhi Mokal Outskill: And whenever you are giving access to your emails, etc, make sure you read the permissions first. And by default, another this thing is, by default, giving permissions does not mean it is going to read that.

43:24 - 43:38

Samruddhi Mokal Outskill: Only when you execute the workflow, or when you... only when you trigger it, only at that point of time it will read the details. So, even if by mistake you have given your access to something, you can revoke it before it getting triggered or before it getting invoked.

43:43 - 43:55

Samruddhi Mokal Outskill: Do we get the Q&A transcripts? If yes, will it be available in post-its? I think you guys have a section about office hours in your LMS where transcripts are also available, but Sumedha will confirm it.

43:59 - 44:05

Samruddhi Mokal Outskill: When creating an MVP app, should we use En to create a workflow, or should we use Lovable or Bolt directly?

44:06 - 44:11

Samruddhi Mokal Outskill: Also, when you are mentioning MVP, MVP stands for Minimal Viable Product, so it depends.

44:12 - 44:16

Samruddhi Mokal Outskill: If you need a front end, then you will have to create it on lovable or Bolt.

44:17 - 44:20

Samruddhi Mokal Outskill: But if you do not need a front-end, let's say you're just,

44:20 - 44:27

Samruddhi Mokal Outskill: creating... I'm taking a simple random example. You're just creating a... Marketing automation from... for someone.

44:28 - 44:29

Samruddhi Mokal Outskill: So, for them.

44:32 - 44:42

Samruddhi Mokal Outskill: Their KPI is going to be just checking whether their posts are going out or not, whether you show something in the front end, or just do it in the backend, or just create an NHN workflow.

44:42 - 44:53

Samruddhi Mokal Outskill: So, in that case, you do not need a front-end that is lovable Bolt. NATN is good... good enough to do that. So, see what is going to show tangible results to your customers, and build on top of it.

44:55 - 45:00

Samruddhi Mokal Outskill: For many of the questions asked, we are being told that this would be answered by support.

45:01 - 45:08

Samruddhi Mokal Outskill: Unfortunately, they're never being answered. Should we take a special question-answer session for support? So this is, again, for Sumedha.

45:13 - 45:21

Samruddhi Mokal Outskill: For scraping social media, can we use a mock account and incognito mode? Yes, you can do that as well, you can create a mock account and,

45:21 - 45:27

Samruddhi Mokal Outskill: scrape that. What usually happens in scraping is, let's say, if I go to this.

45:27 - 45:30

Samruddhi Mokal Outskill: If I double-click this, let's go to Inspect.

45:32 - 45:45

Samruddhi Mokal Outskill: So, this is the entire structure of a website, which is available. When you ask the scraper to scrape it, it is going to inspect this and see what are the different elements of this, and it will start scraping the specific thing

45:46 - 45:49

Samruddhi Mokal Outskill: From this section, or a specific part of the website.

45:52 - 45:58

Samruddhi Mokal Outskill: I won't go into the details of this, but this is what a scraper does usually. It goes and inspects the website and starts scraping from here.

45:59 - 46:01

Samruddhi Mokal Outskill: Alright, let's close this.

46:07 - 46:22

Samruddhi Mokal Outskill: The QR code was created using a website that allowed me to do it free of charge. Now, they say the free account will expire. Will Level change the mapping without the QR code changing? Did not understand. So try giving your initial QR code, I'm not sure how...

46:22 - 46:31

Samruddhi Mokal Outskill: Let's say if you had created your lovable QR code for the first time, then I would have guaranteed you that Lovable will stick to the exact image that is created.

46:32 - 46:46

Samruddhi Mokal Outskill: But since your QR is created with some other website, it depends on the image analysis or vision model of Lovable, how it is able to capture the already existing QR code, and if it can just generate the new one on top of it. Try doing that approach.

46:46 - 46:53

Samruddhi Mokal Outskill: Add the QR code that is there in your prompt while you give it to Lovable, and just tell it, I want to redirect it to this website.

46:56 - 47:00

Samruddhi Mokal Outskill: Yes, guys, this, office hours are recorded. I have to go fast, because we have...

47:00 - 47:05

Samruddhi Mokal Outskill: a lot of questions that are coming up, so I try to be very quick and to the point.

47:06 - 47:15

Samruddhi Mokal Outskill: Compare lovable versus one to use Wix to do websites. What is... what is drawbacks of lovable? Also, lovable is a white coding tool.

47:15 - 47:25

Samruddhi Mokal Outskill: With Lovable, you can create web apps, mobile apps, websites, anything that you want. With Wix, Wix especially for websites, you cannot create web apps on Wix.

47:29 - 47:38

Samruddhi Mokal Outskill: How to build reminder tool via call, SMS, and WhatsApp for customers and employers. This is for payment or work-assigned reminders. Let's say you have a CRM set up.

47:40 - 47:48

Samruddhi Mokal Outskill: you can have a schedule trigger, let's say every morning, 9am, it triggers the workflow. When it triggers the workflow, it goes and checks your

47:49 - 47:52

Samruddhi Mokal Outskill: CRM and sees what are the recent or

47:53 - 48:01

Samruddhi Mokal Outskill: updates to be taken for that specific date, goes and checks the date on the CRM and sees if any pending payments are

48:01 - 48:04

Samruddhi Mokal Outskill: Remaining, any assigned tasks are there.

48:04 - 48:06

Samruddhi Mokal Outskill: So it filters out based on the date.

48:06 - 48:13

Samruddhi Mokal Outskill: And for each of this, in the CRM, you also have a contact assigned for each of the person or each of the payment, customers.

48:14 - 48:27

Samruddhi Mokal Outskill: It will capture that information from your CRM, and in the next section of your workflow, you can add... let's say for calls, you can use retail. For SMS, you can use Twilio. Similarly, for WhatsApp also, you can use two video providers and start sending the reminders.

48:33 - 48:39

Samruddhi Mokal Outskill: How do you govern the number of different AI agents and use cases deployed for business?

48:39 - 48:59

Samruddhi Mokal Outskill: business use within an organization. So the governance policies differ from organization to organization, so if... especially if you're doing consulting, you have to stick to the what is the governance policy of that specific organization. I cannot, introduce a new one. So you just have to see what are their limitations, what are their policies, etc, and build on top of it. For example, for NN, you might have to

48:59 - 49:06

Samruddhi Mokal Outskill: build and written Workflows on their servers. Another is, let's say while configuring, Gmail tools, or Gmail nodes.

49:07 - 49:23

Samruddhi Mokal Outskill: you're not going to get the OAuth authentication. What you have to do is, you have to go in the Google Cloud console, create a web app, get the client secret, give required permissions, and only then you'll be able to connect it. So all of these organizations already have their own policies, stick to those, and add an AI layer on top of it.

49:26 - 49:31

Samruddhi Mokal Outskill: I'm not able to connect Fire Crawl to ChatGPT free version, does it need a paid version?

49:31 - 49:44

Samruddhi Mokal Outskill: I'm not aware if it needs paid version or not. I have my ChatGPT, I was able to connect it, so just check it out if... if it is due to this or not. Ask ChatGPT itself, like, does it need a paid version or not?

49:46 - 49:59

Samruddhi Mokal Outskill: As an organization of 100 people over 4 locations, how do we plan and structure implementing AI building one by one? What is the roadmap to follow, and how to think about it? Okay. Also, whenever you're trying to

50:00 - 50:04

Samruddhi Mokal Outskill: Build automations or add AI layers in your organizations.

50:05 - 50:08

Samruddhi Mokal Outskill: Where to start first, or how to plan it is.

50:08 - 50:24

Samruddhi Mokal Outskill: Start with this question. What is your main goal with the AI? What do you want to achieve with AI? Whether it's increasing your revenue, cut down your cost, cut down scale without growing more number of teammates. So, define that goal, and see.

50:24 - 50:28

Samruddhi Mokal Outskill: What in your workspace is going to be

50:29 - 50:32

Samruddhi Mokal Outskill: Giving you the ability to achieve that goal the fastest.

50:33 - 50:38

Samruddhi Mokal Outskill: Let's say, let's take an example that you want to increase your revenue, and at this point of time.

50:39 - 50:48

Samruddhi Mokal Outskill: Sales is something that is going to help you achieve that goal fastest. So start with sales automations. Once you add a layer of sales automations.

50:49 - 51:05

Samruddhi Mokal Outskill: let's say you are doing cold outreach. So you can start from identifying the ICP to scraping that ICP to doing the complete research about that ICP, creating a hyper-personalized message, and then sending out the emails or social media notes.

51:05 - 51:08

Samruddhi Mokal Outskill: So that is just one example. Once you're done with that.

51:08 - 51:12

Samruddhi Mokal Outskill: You have to keep track of what your KPI is, if it is achieving or not.

51:12 - 51:20

Samruddhi Mokal Outskill: If it is doing the job to a decent level, you can stick to it. If not, make the required iterations or further customize it.

51:21 - 51:28

Samruddhi Mokal Outskill: And then move on to a new department, or to the new workflow. So it depends on what your business goals are, and

51:29 - 51:40

Samruddhi Mokal Outskill: Also, stick to already existing softwares or tools. For example, if you're using a specific CRM, if you're using... let's say you want to send messages to your customer, and you are using Meta's official API, stick to that.

51:41 - 51:45

Samruddhi Mokal Outskill: And just automate the already existing processes. Do not implement or

51:45 - 51:48

Samruddhi Mokal Outskill: Create new processes which are not there.

51:48 - 51:55

Samruddhi Mokal Outskill: create a flowchart of the already existing processes in normal English, and try to add AI to it or on top of it.

51:59 - 52:13

Samruddhi Mokal Outskill: Where is Sumedha and others? Not sure how queries will be answered. We have only 3 days left. So I think Sumedha is here, or if she's busy in something else, but she will check the Slido, whichever questions were for her, maybe she will take it later on.

52:17 - 52:29

Samruddhi Mokal Outskill: So Yahoo email connection, you stated we can connect, however, I did not see nodes in N10. If there is no node to connect, how, how do we create a node to connect? Also, if a Yahoo node is not there, there is a separate email called as email node.

52:30 - 52:35

Samruddhi Mokal Outskill: So you can always use an email node if the specific email provider is not there. Another is...

52:35 - 52:46

Samruddhi Mokal Outskill: take help of NHN's AI assistant itself, that I want to connect my... integrate my Yahoo email, can you do that for me? It will create the entire node for you, and you can just connect your Yahoo email, or any other software.

52:49 - 52:54

Samruddhi Mokal Outskill: Can you please advise on the best platforms for automating SEO, GEO, AEO, or...

52:55 - 52:59

Samruddhi Mokal Outskill: If we have to use multiple ones, is there an automation we can do?

53:01 - 53:11

Samruddhi Mokal Outskill: I'm assuming it is... I have idea is to automate the research, article writing, posting it on different sites, and even social media platforms, and also on WordPress site.

53:13 - 53:16

Samruddhi Mokal Outskill: Okay, I think I have one,

53:16 - 53:19

Samruddhi Mokal Outskill: SEO workflow, let me search that.

53:21 - 53:24

Samruddhi Mokal Outskill: I have multiple SEO workflows, but this is one of them.

53:25 - 53:39

Samruddhi Mokal Outskill: So this is called as trend SEO post, this is called as cluster SEO post. I won't go in depth of, SEO terminologies. Understand SEO terminologies with Claude or ChatGP. It will help you understand what exactly, means in each.

53:39 - 53:45

Samruddhi Mokal Outskill: But, this is what is... find the trends, Find high-volume keywords.

53:45 - 53:51

Samruddhi Mokal Outskill: Then it's going to choose the blog topics, it is going to search, write the post, it's going to create the internal links, and this is going to

53:52 - 54:02

Samruddhi Mokal Outskill: Prepare to post, including HTML version and title, meta description, etc. If you have to add a cover image, it will add the cover image, and it will post on whatever... wherever you want.

54:02 - 54:05

Samruddhi Mokal Outskill: This is similar for, cluster posting as well.

54:07 - 54:19

Samruddhi Mokal Outskill: And there are a lot of templates available for SEO in this template gallery of penitent. So you can research about already existing templates, and start using those initially, and later on create more customization for it.

54:22 - 54:31

Samruddhi Mokal Outskill: With RunPod, I'm using a local machine, but a remote server, so my data is still living... leaving my system. Does that defeat the privacy angle of local models?

54:35 - 54:38

Samruddhi Mokal Outskill: So, even when you are,

54:38 - 54:46

Samruddhi Mokal Outskill: So Runport is going to give you a dedicated server for that specific time. So even if it is leaving your local system, what enterprises do is.

54:47 - 54:55

Samruddhi Mokal Outskill: They also have a server, whether it's AWS server, etc, etc, but the models are not getting, the data is not getting passed to the models.

54:55 - 55:07

Samruddhi Mokal Outskill: You're just running the model on RunPod's server, but the data is not getting passed to the models. You're just getting the hardware from there, you're not, the data is not going anywhere else.

55:08 - 55:12

Samruddhi Mokal Outskill: It is just helping you run those models in a separate server.

55:16 - 55:19

Samruddhi Mokal Outskill: I want my emails read, and information

55:19 - 55:22

Samruddhi Mokal Outskill: And it passed into a Google Sheet.

55:22 - 55:29

Samruddhi Mokal Outskill: with drop-downs, think of RFQs coming in by email. I want to sort them into Google Sheet and update the status.

55:29 - 55:36

Samruddhi Mokal Outskill: as pending complete in a column, how to get an attendant to use drop-downs. Also, whenever you're creating Google Sheets.

55:36 - 55:47

Samruddhi Mokal Outskill: create the sheets in a specific way where it gives you those drop-down options, so just go to Google Sheets Creation Node, you'll be able to find a lot of filters available in that, and you can add the filters, required filters.

55:51 - 55:56

Samruddhi Mokal Outskill: Plenty of tools in my AI toolkit. Is there one app we put the credit card and choose the apps we need?

55:57 - 56:00

Samruddhi Mokal Outskill: No, do not put credit card information anywhere.

56:01 - 56:09

Samruddhi Mokal Outskill: However, you can trust... you don't trust anything with credit cards, so yeah, that's a no.

56:12 - 56:17

Samruddhi Mokal Outskill: On Valentino's behalf, with permission, D11 requires Claude Pro.

56:18 - 56:31

Samruddhi Mokal Outskill: Why is there no Work ChatGPT alternative for pre... for existing paid ChatGPT users? Can equivalent ChatGPT or Codex assignments receive mentor support and count for completion? Which steps are Claude only?

56:33 - 56:37

Samruddhi Mokal Outskill: Again, this is for Sumedha, so yeah, I'll leave it to Sumedha.

56:41 - 56:50

Samruddhi Mokal Outskill: what to use to transcribe voice-to-text. So, all of these, for example, here I have used OpenAI's transcribe model, so...

56:51 - 56:53

Samruddhi Mokal Outskill: Let me search for Jerry.

56:57 - 57:04

Samruddhi Mokal Outskill: So just search for transcriber models, you'll be able to find different models that are available. The one that I have used here is OpenAI's one.

57:10 - 57:12

Samruddhi Mokal Outskill: May I know your thoughts on IBM

57:13 - 57:25

Samruddhi Mokal Outskill: Watsonics Orchestrate, IBM internally deployed it and saved millions of dollars. Weber also mentioned about it, the other day. So I haven't recently read about this, but I'll, look into it and let you know tomorrow.

57:28 - 57:34

Samruddhi Mokal Outskill: Why do all these platforms exist, like the ones you showed on your toolkit website, when Claude or other

57:34 - 57:37

Samruddhi Mokal Outskill: Bit AI Labs can, in theory, do everything.

57:38 - 57:44

Samruddhi Mokal Outskill: So these are all the competitors, guys. They all emerged as competitors, so...

57:46 - 57:58

Samruddhi Mokal Outskill: It depends on your use case. You do not have to learn all of these platforms. Stick to your use case. If Claude is doing that, stick to Claude. If you think Ennaton is going to help you in building better automations and do the job better, stick to that.

57:58 - 58:06

Samruddhi Mokal Outskill: So do not get confused with lots of platforms, just stick to your use case and just use AI, whichever gets done the work fastest and easiest.

58:08 - 58:12

Samruddhi Mokal Outskill: If I want to sell AI consulting services to business clients.

58:13 - 58:19

Samruddhi Mokal Outskill: Should I target Indian businesses or Western clients? It completely depends on,

58:20 - 58:28

Samruddhi Mokal Outskill: you, you can have Indian businesses, you can have Western clients, that is a personal question. But what I'll suggest is, whenever you're starting, stick to

58:29 - 58:35

Samruddhi Mokal Outskill: Wherever you can sell the fastest, and from wherever you can get the first client, whether it's Indian, whether it's Western.

58:35 - 58:40

Samruddhi Mokal Outskill: And then, once you have first client, you can just, get testimonials, you can get,

58:40 - 58:45

Samruddhi Mokal Outskill: You can build your portfolio, and then you can start diversifying your client's portfolio.

58:48 - 58:57

Samruddhi Mokal Outskill: For communities, etc, I have already provided the links in the toolkit, so you can just scroll down to GitHub, etc, which has a list of all the communities.

59:00 - 59:14

Samruddhi Mokal Outskill: Cause you said it will only read my emails if I trigger it. If an action is triggered in N10 and it reads my email, does it store that data in the cloud? In other words, if it has read my emails, am I exposing my private data to these large AI agents or the cloud?

59:14 - 59:21

Samruddhi Mokal Outskill: So... does it store that data in the cloud? It does not store the data as such, but

59:22 - 59:26

Samruddhi Mokal Outskill: Let's say you have added your OpenAI's LLM node to your AI agent.

59:26 - 59:34

Samruddhi Mokal Outskill: So to process that information, it has to get passed on to your OpenAI stat model as part of the prompt.

59:34 - 59:39

Samruddhi Mokal Outskill: So think of it like prompting your chat GPT or Claude with the connectors, so it is similar to that.

59:44 - 59:54

Samruddhi Mokal Outskill: What is an estimated price range of selling AI services to business? So there is no estimated price range as such, it depends on who is your ICP and what type of services you are offering.

59:55 - [01:00:00]

Samruddhi Mokal Outskill: And also, what type of ROI that is, return on investment that you're offering to businesses.

[01:00:00] - [01:00:21]

Samruddhi Mokal Outskill: And also, what type of clients you're getting. So, for example, if it's a very large enterprise, you will be charging them pretty high. If it's a very small business, you will have to charge them according to how much they can pay. So, this is a very broad question. Define your ICP, define their problem statement, and see already how much are they paying to solve that problem statement. That will give you an idea about,

[01:00:22] - [01:00:25]

Samruddhi Mokal Outskill: How much to pitch while you're selling your services?

[01:00:28] - [01:00:39]

Samruddhi Mokal Outskill: Did not understand the benefit of anti-gravity part from it allowing to work locally. Could I do the same using another GPT locally, and then could I add links, skills.

[01:00:39] - [01:00:47]

Samruddhi Mokal Outskill: Like, shown in class, and links to websites to benchmark the look, colors, buttons, etc. Also, ChatGPT is...

[01:00:49] - [01:00:54]

Samruddhi Mokal Outskill: ChatGPT is an AI agent, Anti-gravity is a white coding tool.

[01:00:54] - [01:01:00]

Samruddhi Mokal Outskill: So, can you add connectors and then create something similar with ChatGPT? Yes, you can do that.

[01:01:00] - [01:01:18]

Samruddhi Mokal Outskill: But anti-gravity, especially for creating your web apps, creating front-end, creating backends, ChatGPT cannot create a front-end and back-end and connect or deploy and all of those things for you. If you're using ChatGPT's Codex, Codex is used for white coding. So Codex is a separate product of,

[01:01:18] - [01:01:21]

Samruddhi Mokal Outskill: OpenAI, that is similar to anti-gravity.

[01:01:25] - [01:01:34]

Samruddhi Mokal Outskill: Is it possible to connect personal WhatsApp with NATN or a coding agent to build automations, or does it only work with WhatsApp business account? My use case is

[01:01:34] - [01:01:42]

Samruddhi Mokal Outskill: Use AI to read messages from colleagues and log any tasks or reminders in a central place. So, coming to the personal WhatsApp question.

[01:01:43] - [01:01:49]

Samruddhi Mokal Outskill: If you're going with Meta's official API keys, you can connect only your business accounts, but

[01:01:50] - [01:02:01]

Samruddhi Mokal Outskill: you can use Unipile to connect your personal WhatsApp as well, so check out Unipile, you'll be, unipile's link is already there in the website that I shared, so check out Unipile, you'll be able to connect your personal WhatsApp.

[01:02:04] - [01:02:06]

Samruddhi Mokal Outskill: Can we connect our...

[01:02:07] - [01:02:13]

Samruddhi Mokal Outskill: I'm assuming this is LinkedIn through MCP. It was showing something called GitHub, which I should not... which I could not understand.

[01:02:16] - [01:02:28]

Samruddhi Mokal Outskill: So if there is an MCP available, you can connect through that, but I... I'm not getting how is LinkedIn connected to GitHub. So GitHub and LinkedIn are very separate use cases, so if there is an MCP available, try it out.

[01:02:28] - [01:02:34]

Samruddhi Mokal Outskill: GitHub is very different. GitHub is what you saw yesterday, that is similar to Google Drive for code.

[01:02:40] - [01:02:45]

Samruddhi Mokal Outskill: Again, regarding account... accountants, I want to automate processes like customer account.

[01:02:45] - [01:02:54]

Samruddhi Mokal Outskill: or reconciliations, budget variances, etc. Which AI tools are helpful? Are there any plugins or connectors that are already available you are aware of?

[01:02:55] - [01:03:09]

Samruddhi Mokal Outskill: So what I'll suggest is, for any type of process automation, stick to already existing softwares or tools. Right now, you might... you are going to use some softwares, or you already have some existing softwares that you are using for all of these processes.

[01:03:10] - [01:03:19]

Samruddhi Mokal Outskill: So just search for plugins or connectors for those. If plugins or connectors are not available inside ChatGPT or Claude, look for their API keys.

[01:03:19] - [01:03:22]

Samruddhi Mokal Outskill: And create an NHN workflow for it.

[01:03:22] - [01:03:24]

Samruddhi Mokal Outskill: To create the workflow.

[01:03:24] - [01:03:34]

Samruddhi Mokal Outskill: So these processes are... these are the names of broad processes. You might be following a specific detailed step-by-step breakdown that exists in each of these processes.

[01:03:34] - [01:03:39]

Samruddhi Mokal Outskill: So just create a similar workflow inside NHN itself for this.

[01:03:42] - [01:03:46]

Samruddhi Mokal Outskill: Is it possible to link one AND workflow to another flow? If so.

[01:03:47] - [01:03:55]

Samruddhi Mokal Outskill: Please explain, preferably with a demo. So yes, it is possible, you just have to start with a different trigger node, let's say, call another NHL workflow.

[01:03:55] - [01:03:57]

Samruddhi Mokal Outskill: So, yeah.

[01:03:57] - [01:04:08]

Samruddhi Mokal Outskill: So you can flow, there's going to be add another trigger, and yes, when executed by another workflow, so you can add this node, and it will get triggered only when it is executed by another workflow.

[01:04:16] - [01:04:29]

Samruddhi Mokal Outskill: Can you kindly share your personal experience of acquiring your first client with or without proof of work, and how did you, charge fairly? Please give practical examples. So, my personal experience has been getting my first client through my...

[01:04:29] - [01:04:31]

Samruddhi Mokal Outskill: previous, network.

[01:04:32] - [01:04:46]

Samruddhi Mokal Outskill: So I just started telling that I am doing XYZ, reached out to my network, and I asked them, can I build something like this? What are the problem statements that you guys are facing right now? Can I build... try to solve it with AI? And then I started creating a portfolio.

[01:04:46] - [01:05:06]

Samruddhi Mokal Outskill: And parallelie, I also started sharing my work, so whatever I was doing, I started sharing it on social media, and that started getting good amount of traction. And further, my... most of my recent clients have been through referrals, so I do post on socials, but I have stopped posting much on socials because I'm getting good number of clients from referrals. So you have to build your own

[01:05:06] - [01:05:14]

Samruddhi Mokal Outskill: pipeline of clients. You can also do cold outreach, you can also start with social medias, and charging fairly depends, again, on the type of client.

[01:05:15] - [01:05:16]

Samruddhi Mokal Outskill: So, yeah.

[01:05:19] - [01:05:33]

Samruddhi Mokal Outskill: If today's exercises must use paid Claude Claude, will Outskill provide access and enough credits for practical practice and troubleshooting? Please clarify subscription costs included quota, so I don't think you are going to get,

[01:05:33] - [01:05:37]

Samruddhi Mokal Outskill: plot subscription from Outskill, but I'll let Sumedha take it... take this question.

[01:05:41] - [01:05:47]

Samruddhi Mokal Outskill: What do you suggest for where you're hosting your own websites, typical cost per month?

[01:05:47] - [01:05:52]

Samruddhi Mokal Outskill: So I personally use Versil, so unless and until you have very...

[01:05:53] - [01:06:12]

Samruddhi Mokal Outskill: heavy backend. Versil is free, so I... for my personal use cases, I use WordSil, but if I'm doing something for clients, I have to stick to their servers, for example, AWS servers, etc. And if you want to go beyond Versal, you can check out Railway. Railway is very cheap as compared to AWS.

[01:06:15] - [01:06:23]

Samruddhi Mokal Outskill: In NHN, when we are creating workflows, is there a limit as to how many triggers and workflows that may be used in one project?

[01:06:24] - [01:06:29]

Samruddhi Mokal Outskill: So there is no limit as such, but if you just congest everything.

[01:06:30] - [01:06:33]

Samruddhi Mokal Outskill: In one thing, it is going to get confused, so make sure you

[01:06:34] - [01:06:40]

Samruddhi Mokal Outskill: Create a structure such that even if one thing breaks down, your entire flow does not break.

[01:06:40] - [01:06:45]

Samruddhi Mokal Outskill: And also, make sure you add your error handling workflow so that,

[01:06:45] - [01:06:54]

Samruddhi Mokal Outskill: It triggers that whenever you're facing errors in N10 Workflows. Do not congest everything in one workflow, and coming to this one project.

[01:06:55] - [01:07:06]

Samruddhi Mokal Outskill: So, project, I don't know what exactly you mean by project, but if you mean one project as in this one canvas, that is what I answer to. Project is something where you can have as many workflows as you want.

[01:07:07] - [01:07:14]

Samruddhi Mokal Outskill: So yeah, I can see Sumedha back on the screen, so I'll hand it over to Sumedha from here, and we'll take the rest of the questions tomorrow.

[01:07:15] - [01:07:24]

Sumedha: Perfect. Thank you so much, Samrati. That was an amazing, insightful session, as always. So, thank you so much for taking it up, and I'll see you again tomorrow.

[01:07:24] - [01:07:28]

Sumedha: So, also thank you everyone for joining in.

[01:07:28] - [01:07:52]

Sumedha: Upcoming is a quick 30 minutes break that we will be taking, and post that, we will be having our Cloud Mastery session. So, for that, we will have a very special mentor, Vishwas, coming in, and he will be taking up the session. Post that, we will be, discussing everything you need to know about Hackathan, right? So, we will be getting started with our step

[01:07:52] - [01:07:58]

Sumedha: to today. So, I hope you can go ahead, take a quick rest, and come back.

[01:07:58] - [01:08:02]

Sumedha: Fully energized, ready for the session and the hackathon.

[01:08:07] - [01:08:17]

Sumedha: Okay, Vinash, if you... if you can put your query one more time, that will be great, I couldn't see it.

[01:08:17] - [01:08:32]

Sumedha: For everyone who have filled the form, the groups have just been allocated, so please go ahead and check once again. If not, please make sure you are raising a request and filling the form, and...

[01:08:32] - [01:08:49]

Sumedha: Yeah, if you have raised the request, then we have already shared it just before some time while the session was going on, and you will be finding your group, alright? So make sure you are raising the request, and we will be sharing you the access.

[01:08:49] - [01:08:50]

Sumedha: Alright.

[01:08:52] - [01:08:55]

Sumedha: Perfect. With that, we can go ahead.

[01:08:57] - [01:09:11]

Sumedha: Okay, you can use the Ask Doubt session for asking your doubts. There is a mentor called Santesh who is taking those questions up. He will be, able to respond to you within 24 hours.

[01:09:14] - [01:09:27]

Sumedha: So, if you are not able to find your group, I will quickly share you the Hackathon Group Allocator app, if you do not have it already. Let me quickly share it with you.

[01:09:28] - [01:09:36]

Sumedha: Just give me one second. Since you are... there are a couple of questions, I will just take a minute.

[01:09:39] - [01:09:43]

Sumedha: Yeah, so in the chart is the website, you can...

[01:09:43] - [01:10:06]

Sumedha: type in your registered email ID, and you will be able to find your group, and will be able to join your WhatsApp. If you are not finding your group, you will see an option to raise a

request. So make sure you are raising a request with your full name, correct email ID, and your registered phone number. That's when you will be allocated a different group.

[01:10:06] - [01:10:26]

Sumedha: Okay? And if you refresh, and then try again, in some time, you will be able to join the WhatsApp group. I hope this helps. With that, we have a dedicated section for Hackathon today. We will take all those questions in that particular section, and I'll go ahead, stop this session, and take, let you have some rest.

[01:10:29] - [01:10:30]

Sumedha: Nope. Okay.
