

## Day 9 Live Session

### **10:29 - 10:38**

Sumedha: Hello, everyone. How is everyone doing? Warm, warm, welcome to your Day 9 of AI Accelerator program.

### **10:38 - 10:49**

Sumedha: Very good morning, good afternoon, good evening to everyone who is joining in from different parts. How is everyone doing? I'm doing well, thank you so much for asking.

### **10:51 - 10:52**

Sumedha: Amazing.

### **10:56 - 11:10**

Sumedha: Okay, I can already see somebody saying excited for today's session. I was just gonna ask, by the way, how is the energy on day 9? I mean, it's already day 9, can you imagine? It feels like we just started yesterday.

### **11:15 - 11:20**

Sumedha: Amazing. Super excited. Alright, full energy, okay, amazing.

### **11:23 - 11:42**

Sumedha: Doing great, perfect. Overloaded. Yes, it is week 2, people. I already warned you on day 7, right? That week 2 is gonna be more, so... and I assure you, you are gonna enjoy it. So, you can expect it.

### **11:42 - 11:54**

Sumedha: It is exhaustive, yes. We have to learn so many things. There is so many things out there in the world of AI that we need to learn by 14 days, so it is gonna be a bit exhaustive, but

**11:54 - 12:04**

Sumedha: I hope you can keep in your mind that it's just 14 days, and after 14 days, you will know, and you will be ahead of so many people.

**12:04 - 12:14**

Sumedha: Who even works with you, who you'd know, and that is the motivation that will push you to complete the entire program for 14 days.

**12:14 - 12:18**

Sumedha: With that, are we ready to get started for today's session?

**12:19 - 12:22**

Sumedha: A quick yes, no, In the chat?

**12:24 - 12:25**

Sumedha: Yes?

**12:25 - 12:26**

Sumedha: Perfect.

**12:28 - 12:37**

Sumedha: Perfect. With that, let me quickly share my screen and get started with today's session without any further delay.

**12:38 - 12:57**

Sumedha: Alright, so, before we get started, for today's session, I quickly wanted to know one thing as well. So, after so many things that we have learned, so we have already learned for 8 days, right? So, we have learned so many things, like, so many AI tools, workflows.

**12:58 - 13:07**

Sumedha: So, I just wanted to quickly check, like, which one among all those tools that you have learned, the workflows that you have learned, surprised you the most?

**13:07 - 13:17**

Sumedha: Like, it could be something you didn't expect that it could be useful, or something that you have ended up using way more than you thought you would.

**13:18 - 13:25**

Sumedha: Alright, I can see... So many Anittins in the chat. That is amazing.

**13:25 - 13:27**

Sumedha: Alright.

**13:28 - 13:34**

Sumedha: Image and video. Great to see image and video in... among the surprising ones.

**13:35 - 13:37**

Sumedha: Content creation, okay, great.

**13:40 - 13:46**

Sumedha: Okay, I can see so many Anittins coming in. Also, I see the Lovables coming in.

**13:47 - 13:50**

Sumedha: Claude, okay, yeah, perfect.

**13:50 - 13:51**

Sumedha: So...

**13:51 - 14:08**

Sumedha: Now, I ask you to drop this, because in today's session is going to take that one step further from what you have learned till date. So, we are going to talk about what actually sits behind some of these AI coding workflows.

**14:08 - 14:27**

Sumedha: So, let's say starting with harness and open sources, and then also getting into Grokbot, how you can use it, and some interesting use cases with Grokbot. We will also look at codecs as a harness, and then explore how open-source models can work with codecs.

**14:27 - 14:30**

Sumedha: So, there's a lot packed in today's session.

**14:31 - 14:34**

Sumedha: Right? So, are we excited for today's session?

**14:38 - 14:47**

Sumedha: And I can assure you, you will get a better understanding of how this different pieces comes together and fits together, right?

**14:47 - 15:05**

Sumedha: So, to take us through all these things, we have none other than Dilip with us today, one of your favorite mentors. So, he will be walking us through the entire concepts, as well as the entire session. So, without any further delay, I'll hand over the call to Dilip.

**15:05 - 15:10**

Sumedha: for the next couple of hours. So, hi Dilava, welcome back.

**15:10 - 15:12**

Sumedha: And I'll leave the session to you.

**15:12 - 15:15**

Dileep Karri: Hi, everyone. Oh, buddy.

**15:15 - 15:17**

Dileep Karri: Warm welcome to all of you.

**15:17 - 15:20**

Dileep Karri: Are you able to hear me well?

**15:23 - 15:25**

Dileep Karri: Okay? Cool.

**15:25 - 15:32**

Dileep Karri: So, while my flu has recovered, my throat is still a little off.

**15:32 - 15:36**

Dileep Karri: Right? So, but don't worry.

**15:36 - 15:54**

Dileep Karri: I have enough energy to walk you through the session overall. This is the maximum volume I can go for, because I have to sustain quite a bit. I would advise you to plug in with a headphone or an earphone, and turn up your volume, because I think this is sufficient, okay?

**15:54 - 16:00**

Dileep Karri: Everybody, good? Will you be okay with that? Okay? Awesome.

**16:01 - 16:11**

Dileep Karri: Good. So, today there is no workbook. The reason being we are going to go into a lot of material, number one, and plus

**16:12 - 16:15**

Dileep Karri: The other thing which we thought was give you a little breather.

**16:15 - 16:24**

Dileep Karri: In terms of workbooks, so that you get some time, and you have a hackathon also kind of coming towards this.

**16:24 - 16:28**

Dileep Karri: Okay? So what I'm going to do in today's session

**16:28 - 16:34**

Dileep Karri: Would be open-source models, as well as I will go deep into codecs.

**16:34 - 16:54**

Dileep Karri: Okay? We will kind of do a lot of things. Just because there is no workbook doesn't mean the session is going to be less intense. Expect today's session to be a little longer. I will give good enough number of breaks. Of course, for me also, whenever I feel I need to take a break, I will give the break.

**16:54 - 16:56**

Dileep Karri: Okay? So,

**16:57 - 17:05**

Dileep Karri: That is the overall, you know, idea behind this session. So, without any further ado, let's get started.

**17:14 - 17:18**

Dileep Karri: Alright, so, one minute, I'll just...

**17:22 - 17:40**

Dileep Karri: Right, questions in the Q&A section, please? Because as I'm going through things, I will not have time to switch and, you know, take a different path, but I assure you, a lot of the questions that you have, I will be able to answer as we go along.

**17:40 - 17:51**

Dileep Karri: Okay? So what we're going to do is we are going to learn how to build a strong harness, and what is a harness, etc. I'm going to explain that also, so don't worry.

**17:51 - 18:01**

Dileep Karri: This session today, I would call it Building Stronger Harnesses, and some of the harnesses that we have, we are going to use.

**18:01 - 18:03**

Dileep Karri: bot and open-weight Models.

**18:04 - 18:10**

Dileep Karri: Our team, can you turn on the Q&A chat so that people can put in their questions? I think that has been turned off.

**18:28 - 18:31**

Dileep Karri: Alright, the team will activate it soon, don't worry.

**18:37 - 18:39**

Dileep Karri: Team for Q&A.

**18:39 - 18:41**

Dileep Karri: Please turn it on.

**18:41 - 18:46**

Sumedha: Q&as on, the lip. They can put up the questions in Q&A.

**18:47 - 18:49**

Dileep Karri: Yeah, can you see that? I can see the Q&A.

**18:50 - 18:52**

Dileep Karri: Just check, everyone.

**18:52 - 18:55**

Dileep Karri: I think still turned off, can you see what is happening?

**18:59 - 19:04**

Dileep Karri: Can somebody put in a thumbs up if you're able to see in the Q&A? Yeah, it's on now, yeah, it's on now.

**19:04 - 19:06**

Dileep Karri: Yeah, good.

**19:06 - 19:07**

Dileep Karri: All right.

**19:10 - 19:26**

Dileep Karri: Okay, so for those of you who are complaining my volume is a little low, this is the best I can do, right? My throat is a little bit off. I would suggest put on your headphones, turn on your volume, etc, so that you're able to hear me clearly.

**19:26 - 19:28**

Dileep Karri: Good? Okay.

**19:29 - 19:33**

Dileep Karri: Let's get started. I want to focus on, these things.

**19:33 - 19:44**

Dileep Karri: All right, so what we are going to do is we are going to learn how to build stronger harnesses, and we are going to look at Grok bot, open weight models, and a bunch of other things overall.

**19:44 - 19:47**

Dileep Karri: A key thing you will learn today is...

**19:47 - 19:54**

Dileep Karri: If you've got your own local models, how can you make it work with your ChatGPT app?

**19:54 - 20:11**

Dileep Karri: Okay? Your own local models, how can you make it work with your ChatGPT app? That is something that you're going to learn today, so that if you want to use your local models within ChatGPT, it is possible, official. Okay? So we are going to follow that process.

**20:13 - 20:20**

Dileep Karri: So, before we kind of get into it, right, a lot of times, the different AI tools that you have used

**20:20 - 20:38**

Dileep Karri: It is in a kind of a transactional way you're using, right? Where you type, it answers, you keep having different, multiple turns of conversations with it, okay? In a way, in ATEM, it does some work for you.

**20:38 - 20:47**

Dileep Karri: Right? In Vivek coding, the tool that you use does some work for you, but in terms of the tools like Claude or ChatGPT,

**20:47 - 20:53**

Dileep Karri: Every tool, it kind of waits for you, and it's a turn-based conversation.

**20:54 - 20:58**

Dileep Karri: that you have been having, okay? So...

**20:58 - 21:04**

Dileep Karri: Then, what would happen is, from a turn-based conversation, you would have seen on day 5,

**21:05 - 21:18**

Dileep Karri: AI kind of finishing jobs. You saw AI kind of make a Nike video. If you remember Day 5, you were shown how an ad was made in Nike. Thumbs up if you remember that.

**21:18 - 21:21**

Dileep Karri: A small ad was made in Nike.

**21:21 - 21:30**

Dileep Karri: And that happened through AI. So, instead of telling you, here is a script for an ad, it actually made the ad.

**21:30 - 21:40**

Dileep Karri: So, AI tools started finishing the jobs, okay? So today, we are going to unravel the magic behind how AI tools are actually finishing the jobs.

**21:41 - 21:45**

Dileep Karri: And that is happening because of something called harness.

**21:46 - 21:52**

Dileep Karri: The harness is the software around AI that lets it do a job.

**21:52 - 22:03**

Dileep Karri: Okay? Simple definition of harness, the software around AI that lets it do a job, and most of the times, the harness is like this.

**22:05 - 22:07**

Dileep Karri: So, I have got my AI.

**22:08 - 22:12**

Dileep Karri: My harness would be connectors.

**22:15 - 22:19**

Dileep Karri: So, for the Nike ad, you would have seen Xfield being used.

**22:23 - 22:26**

Dileep Karri: So, Higgs field is like a harness.

**22:26 - 22:27**

Dileep Karri: to Europe.

**22:27 - 22:30**

Dileep Karri: AI. Then you have skills.

**22:32 - 22:35**

Dileep Karri: Suppose you want to write the ad script.

**22:40 - 22:46**

Dileep Karri: you will require skills. So, in a way, the connectors and skills together

**22:48 - 23:08**

Dileep Karri: form, like, a very good harness for your AI to actually get things done. So it is the tools and the skills which kind of come together. So this arrangement that you set up around AI, that is what is called as harness. Is everybody clear on that? Thumbs up if you're clear on the concept of harness.

**23:08 - 23:11**

Dileep Karri: That it is the connectors and the skills.

**23:11 - 23:13**

Dileep Karri: That become harmless.

**23:15 - 23:21**

Dileep Karri: We will now try to understand why this becomes important, what are the key factors behind this.

**23:21 - 23:27**

Dileep Karri: Okay? What a harness does is, it gives AI hands it gives...

**23:27 - 23:31**

Dileep Karri: It makes it pick what it can see.

**23:31 - 23:38**

Dileep Karri: It runs it again after each step, sometimes holds back when something needs your attention.

**23:39 - 23:49**

Dileep Karri: Okay? So, it kind of gives the hands, the eyes, the legs for your AI to actually do tasks, and that is what, kind of, what a harness does.

**23:50 - 23:50**

Dileep Karri: Ain'?

**23:51 - 24:00**

Dileep Karri: The model decides the harness does. Okay, the model is the brain which decides the actions, but the harness kind of executes it.

**24:01 - 24:06**

Dileep Karri: Okay, so now let us get back to our codecs, and

**24:06 - 24:19**

Dileep Karri: So, from here on, I'll keep switching screens, so kind of, you know, you understand the concept very, very clearly. And as I go down the road, I will kind of

**24:19 - 24:24**

Dileep Karri: Touch upon multiple examples to explain very clearly what an harness is.

**24:24 - 24:32**

Dileep Karri: Okay, I think within the next 25 minutes, you should get a very clear understanding about what the harness is.

**24:35 - 24:46**

Dileep Karri: Alright, so let me open my chat GPT, okay? So this is my ChatGPT, and I can open any kind of a new chat.

**24:46 - 24:48**

Dileep Karri: as required.

**24:49 - 24:53**

Dileep Karri: Okay, something is off, let me shut it down and again...

**24:54 - 24:56**

Dileep Karri: Do this, just as a second.

**24:59 - 25:08**

Dileep Karri: So sometimes when your code, you know, ChatGPT is not working, it makes it a good sense to restart it from scratch.

**25:18 - 25:19**

Dileep Karri: Conn right.

**25:19 - 25:22**

Dileep Karri: Utsa, let me share my screen.

**25:29 - 25:42**

Dileep Karri: Alright, so this is, typical, things. So, when you see the plugins, okay, whatever plugins you are seeing, these plugins are part of your harness.

**25:42 - 25:56**

Dileep Karri: So, if you are given Gmail, you are giving AI the access to your email, to read your email, to respond to your email. That is one kind of harness, okay? And then...

**25:56 - 26:10**

Dileep Karri: When you give access to, say, something like Tableau, you are giving it access so that it can check your Tableau, understand what are the different data sets which are present in Tableau. That is another kind of harvest.

**26:10 - 26:15**

Dileep Karri: Okay, so you have all these plugins which form a harness.

**26:15 - 26:23**

Dileep Karri: Plus, skills. Any skills that you are trying to provide, those are the different harnesses you are providing.

**26:23 - 26:26**

Dileep Karri: So, the... The way you are...

**26:26 - 26:34**

Dileep Karri: ChatGPT or your cloud becomes powerful, he's giving it the right set of tools and skills.

**26:35 - 26:42**

Dileep Karri: Okay? So what we'll do next for the next 10-15 minutes is to understand what are the different

**26:43 - 26:44**

Dileep Karri: skills.

**26:44 - 26:54**

Dileep Karri: or tools you can give your entire ChatGPT platform so that it becomes a system with a powerful harness.

**26:54 - 27:03**

Dileep Karri: Okay? And some of it, we will kind of connect the dots of the previous session, so that you understand how this harness kind of comes together.

**27:06 - 27:21**

Dileep Karri: Okay? Everybody following so far? So, I have showed you that the plugins and skills are part of your harness, and now we are, you know, kind of getting into the fact where we will go deep into the harness. Okay? Now...

**27:21 - 27:22**

Dileep Karri: The first thing.

**27:23 - 27:26**

Dileep Karri: You are trying to do wipe coding.

**27:26 - 27:33**

Dileep Karri: Okay? So... What I can tell you is, for Vivek coding, there are some specific set of

**27:34 - 27:38**

Dileep Karri: Connectors and skills, which can really help you out.

**27:38 - 27:44**

Dileep Karri: So, one of the connectors that can help you in white coding is something called...

**27:46 - 27:49**

Dileep Karri: Context server. Let us see if you can search for it.

**27:52 - 27:57**

Dileep Karri: There you go, context 7. Are you able to see this? Thumbs up if you're able to see this.

**27:58 - 28:05**

Dileep Karri: Context 7, okay? So, what is Context 7? Why is this important? Okay?

**28:07 - 28:09**

Dileep Karri: Let us understand this part.

**28:13 - 28:23**

Dileep Karri: So, Context 7 is like an up-to-date documentation for AI agents, okay? It could be your codecs, your cloud, or any platform.

**28:24 - 28:41**

Dileep Karri: Imagine that you are asking it to wipecode a particular app. When you're doing the Vip coding, it needs access to the latest documentation. Otherwise, it will pick older documentation, and it could hallucinate in that older documentation.

**28:41 - 28:54**

Dileep Karri: To avoid the hallucination, you require up-to-date documentation to be provided, and this tool, or this connector, gives you access to that up-to-date documentation.

**28:54 - 29:04**

Dileep Karri: Okay, so this becomes an important, you know, connector or a plug-in for your Codex. By the way.

**29:04 - 29:12**

Dileep Karri: Here, I'm giving this connector right now. When you actually go and work with a tool like

**29:13 - 29:26**

Dileep Karri: Claude, you can also add the same connector. So, whether you are on Claude or on ChatGPT, the same harness would work. Okay, so here I can just switch to ChatGPT right now, because

**29:26 - 29:30**

Dileep Karri: For our work, ChatGPT is more than sufficient.

**29:30 - 29:35**

Dileep Karri: I go here... I search for context 7.

**29:35 - 29:37**

Dileep Karri: And I click on plus.

**29:39 - 29:44**

Dileep Karri: And there you go, it will ask me to authenticate. So, I will authenticate.

**29:51 - 29:53**

Dileep Karri: And once I authenticate, I'll continue.

**29:55 - 30:10**

Dileep Karri: I'll give it the permissions, and once the permissions are given, I can open ChatGPT, and then my Context 7 is connected. So now, I have given my... a special part of my harness.

**30:10 - 30:16**

Dileep Karri: So that my AI can have access to the best documentation.

**30:16 - 30:21**

Dileep Karri: So now, the entire game of using AI will

**30:21 - 30:26**

Dileep Karri: becomes around trying to provide the right harness for your AI.

**30:26 - 30:31**

Dileep Karri: So now, it is no longer a question of, is Claude better?

**30:32 - 30:34**

Dileep Karri: Is ChatGPT better?

**30:34 - 30:38**

Dileep Karri: The question becomes, how good is your harness?

**30:39 - 30:42**

Dileep Karri: And that is where the game kind of becomes.

**30:43 - 30:57**

Dileep Karri: Right? So, I want you to kind of move away from this point of, is ChatGPT better, is Claude better? Rather, think, this is the tool I am in, let me build a stronger harness around it.

**30:57 - 31:06**

Dileep Karri: So let me spend 5-10 minutes on defining a good harness, and then we will set up the harness inside ChatGPT. So there is no...

**31:06 - 31:15**

Dileep Karri: In a way, there is nothing like I'm going to teach you something absolutely new that will give you productivity inside Chat JPT.

**31:15 - 31:30**

Dileep Karri: Whatever I teach on ChatGPT can be applied to Claude, can be applied to any tool that you are using. Maybe not Gemini, because Gemini doesn't have this rich ecosystem, but you can build this solid harness app.

**31:31 - 31:34**

Dileep Karri: Okay, so let me come back.

**31:37 - 31:42**

Dileep Karri: And here, Let me try to build a solid harness.

**31:45 - 31:47**

Dileep Karri: for my ChatGP meeting.

**31:47 - 31:52**

Dileep Karri: Okay? Before I build a solid harness and ideate that harness with all of you.

**31:53 - 31:59**

Dileep Karri: What we can understand is the harness is like the cockpit of a flight.

**31:59 - 32:07**

Dileep Karri: Okay? So, taking the flight from point A to point B, that is, like, the job given to AI.

**32:07 - 32:23**

Dileep Karri: the models, the typical models you work with, that would be the pilots, and the harness is the cockpit, okay? So suppose you are in a very old-fashioned flight. It doesn't have many features at all.

**32:23 - 32:26**

Dileep Karri: Now, you put the best pilot in the world.

**32:26 - 32:29**

Dileep Karri: It will not be able to run well.

**32:29 - 32:32**

Dileep Karri: Now, get the best flight of the world.

**32:32 - 32:36**

Dileep Karri: With all the uber modern features.

**32:36 - 32:48**

Dileep Karri: But if you're not putting the strong pilot there, again, then there is a problem, because you put a weak pilot, the pilot will not be able to handle the harvest.

**32:49 - 32:58**

Dileep Karri: Right? So, the right flight you need to have needs to have a strong pilot, With a decent cockpit.

**32:58 - 33:06**

Dileep Karri: Now, ChatGPT has a strong pilot in the form of Astra, and SOL Models.

**33:06 - 33:10**

Dileep Karri: You have a strong pilot in Claude with Fable.

**33:11 - 33:18**

Dileep Karri: and Opus Models. So, all you have to do is set up the cockpit properly, and there you go.

**33:19 - 33:34**

Dileep Karri: Everybody clear so far? Why the focus is now shifting from the model towards the harness, and we are going to focus on setting up a strong cockpit so that our AI can do jobs really well.

**33:34 - 33:38**

Dileep Karri: Thumbs up if you are understanding this part.

**33:44 - 33:45**

Dileep Karri: Okay, awesome.

**33:45 - 33:54**

Dileep Karri: So now that we have an idea with this, let me try to give you a good view of a nice

**33:54 - 33:57**

Dileep Karri: Hardness, how should it look like?

**33:58 - 34:07**

Dileep Karri: So, for ChatGPT, if you want to build a strong harness, you need to give at least these basic capabilities.

**34:07 - 34:16**

Dileep Karri: One thing is... You know, you need to give it, like, a strong code documentation.

**34:19 - 34:30**

Dileep Karri: Because if you are asking it to Vivek code something, it needs access to the best documentation overall, and that is where Context 7.

**34:32 - 34:33**

Dileep Karri: comes into play.

**34:34 - 34:36**

Dileep Karri: Okay? So this is the...

**34:37 - 34:44**

Dileep Karri: tool. So wherever it is a tool, I will mention it's a tool. Wherever it is a skill, I will mention it to be a skill.

**34:47 - 34:52**

Dileep Karri: Then the next part is, I need to give powerful search.

**34:52 - 35:02**

Dileep Karri: Because if I want my AI to hallucinate lesser, the more powerful search engine I give, the lesser it will hallucinate.

**35:03 - 35:10**

Dileep Karri: So, I need to kind of give it a search engine so that it can hallucinate this.

**35:11 - 35:15**

Dileep Karri: Okay? So the different search engines which are available are...

**35:17 - 35:20**

Dileep Karri: There is something called parallel search.

**35:21 - 35:38**

Dileep Karri: Parallel Search is a company set up by Parath, who was the ex-CEO of Estwild Tutor. So, he has set up this Parallel Search company, which is, like, search engine mechanisms for AI agents. Again, available free.

**35:38 - 35:45**

Dileep Karri: You have parallel search, then there is also something called Tavoly Search.

**35:47 - 35:49**

Dileep Karri: or Excel search.

**35:52 - 35:58**

Dileep Karri: Multiple options are available. You can choose any one of those. I choose Parallel search.

**36:00 - 36:06**

Dileep Karri: Okay? And to set up parallel search, you don't have to, again, you know.

**36:06 - 36:20**

Dileep Karri: break your head, go to any search, go to perplexity, and say parallel Such... MCP?

**36:20 - 36:23**

Dileep Karri: I usually get some documentation.

**36:23 - 36:24**

Dileep Karri: Open it.

**36:27 - 36:36**

Dileep Karri: Right? There should be some kind of a one-click install which is given, where you can see if it can work or not.

**36:36 - 36:38**

Dileep Karri: In case this is getting too much.

**36:38 - 36:46**

Dileep Karri: Okay? Here is a simple method. Copy this page, or copy the... URL of this page.

**36:47 - 36:55**

Dileep Karri: Okay? And, then you can go to... You are... DVD?

**36:55 - 36:57**

Dileep Karri: Start a new chat.

**36:58 - 37:00**

Dileep Karri: Okay? Paste it.

**37:00 - 37:05**

Dileep Karri: Then say, install... Parallel search.

**37:06 - 37:09**

Dileep Karri: MCP, if not get...

**37:14 - 37:30**

Dileep Karri: Okay? You don't have to do anything, you just have to give it the link to the documentation, and say, please install this if it is not yet set up. Your ChatGPT app is intelligent enough to figure out how to install it.

**37:31 - 37:40**

Dileep Karri: Okay? If you are non-technical, you have been worried, how do I install MCPs? By the way, this can work only when

**37:41 - 37:45**

Dileep Karri: You know, it is, like, you know...

**37:46 - 38:03**

Dileep Karri: a desktop app. This will not work on your web, okay? Ensure that it's a desktop app. In a way, I have already installed this, so it is already registered in my configuration, but this can work only on desktop, not on mobile.

**38:07 - 38:17**

Dileep Karri: Okay, so I have given it a strong search engine so that it can search for any information which is available. Good.

**38:17 - 38:20**

Dileep Karri: Now, I will require something like a scraper.

**38:21 - 38:32**

Dileep Karri: Okay? Something like a scraper would be needed. Why? Sometimes I want to scrape web pages, so I would try to do some scraping overall.

**38:32 - 38:36**

Dileep Karri: So for that, I can use Fire Crawl.

**38:37 - 38:38**

Dileep Karri: I'm thinking.

**38:40 - 38:42**

Dileep Karri: or firecrawl.dev.

**38:44 - 38:48**

Dileep Karri: Okay? So, I can say, add fire crawl to your agent.

**38:49 - 39:02**

Dileep Karri: So here it is mentioning that I can install it, I can just go to FireCrawl, set up my account, and they have, you know, one-click command installations which are available.

**39:03 - 39:07**

Dileep Karri: Okay? So, I can say install on codecs.

**39:09 - 39:12**

Dileep Karri: Okay? I can say, add to chat GPT.

**39:12 - 39:14**

Dileep Karri: Or I can copy the prompt.

**39:15 - 39:17**

Dileep Karri: I can copy the whole prompt.

**39:21 - 39:22**

Dileep Karri: Go to CHATGPT.

**39:23 - 39:25**

Dileep Karri: Start a new check?

**39:26 - 39:30**

Dileep Karri: And paste that entire prompt over there.

**39:33 - 39:43**

Dileep Karri: Okay? I will say, go for it, and it will then go through this entire process and, you know, do it for me. I don't have to write anything.

**39:43 - 39:50**

Dileep Karri: Right now, every platform has become very agent-friendly, or harness-friendly.

**39:50 - 40:00**

Dileep Karri: So, it will actually go ahead and try to, you know, build this entire part and ensure that your agent is kind of kept.

**40:05 - 40:21**

Dileep Karri: There is this pop-up which is coming, don't worry about it. Sometimes it comes up, you don't have to worry. So, it is, found that there was an older FireCrawl connection, so it is going to update that and set up this connection for me.

**40:21 - 40:23**

Dileep Karri: So now...

**40:23 - 40:32**

Dileep Karri: I have my part of my harness, this extra capability of FireCrawl, which can scrape web pages for me.

**40:36 - 40:51**

Dileep Karri: Everybody clear so far? We are building up a strong harness for ChatGPT. Same thing can work even on cloud desktop also, but please remember, it'll work only on desktop apps. It does not work on web.

**40:51 - 40:52**

Dileep Karri: Okay?

**41:02 - 41:11**

Dileep Karri: Right, so this is the... Now, let us think about another part of the harness. So, I have scraper.

**41:17 - 41:28**

Dileep Karri: Which is Fire Crawl. Now, so far, I have given you free. The parallel search is free to some extent. Fire crawl is also free to some extent.

**41:28 - 41:32**

Dileep Karri: Now, suppose if I want to do heavyweight crawling.

**41:32 - 41:36**

Dileep Karri: Right? Then I will have to upgrade this to Appify.

**41:40 - 42:00**

Dileep Karri: Okay? I need to upgrade to Appify, where you'll have to recharge it with some dollars, so that you are having some credits to scrape different websites. Okay? So what you'll do is, in your harness, if you give Appify, you can give it access to YouTube, you can give it access to

**42:00 - 42:04**

Dileep Karri: Instagram, and you can scrape Instagram, you can scrape YouTube.

**42:05 - 42:14**

Dileep Karri: Now, Appify is a... Okay, so it is asking to authorize, so I just have to authorize right now.

**42:15 - 42:23**

Dileep Karri: Authorization done. See, I don't have to open the... this thing, I just left it, it opened the window, and I just did it for itself.

**42:23 - 42:29**

Dileep Karri: So, Appify first, Stronger, YT, or IG scripting.

**42:32 - 42:37**

Dileep Karri: Alright? Now, in case you want to do this for free.

**42:40 - 42:43**

Dileep Karri: Okay? There is something called YTDLP.

**42:45 - 42:46**

Dileep Karri: Okay?

**42:46 - 42:51**

Dileep Karri: There is something called YKTLP, which you can set it up for free.

**42:51 - 42:55**

Dileep Karri: So, for YTLP, very simple process.

**42:55 - 42:58**

Dileep Karri: go to YTDLP, search for it.

**42:58 - 43:02**

Dileep Karri: So you can go to YTDLP, GitHub, or any place.

**43:12 - 43:13**

Dileep Karri: Okay?

**43:16 - 43:17**

Dileep Karri: Copy this link.

**43:17 - 43:20**

Dileep Karri: Okay, copy this VTDLP link.

**43:22 - 43:27**

Dileep Karri: go into Choud GPT, Start a new chat.

**43:28 - 43:34**

Dileep Karri: Put this, and you say, install this, If Lord yet.

**43:34 - 43:35**

Dileep Karri: installed.

**43:37 - 43:56**

Dileep Karri: By the way, if you are a non-technical person in doing this, ensure that you are giving your ChatGPT full access. Once your installations are done, then you can change the permissions and give it approve for me or ask for approval. But typically, for these installations, allow it full access.

**43:59 - 44:14**

Dileep Karri: So then, I'm asking it to install this, if not yet installed. My Chat JP is intelligent enough to go read through the documentation, read through the steps, and then try to install it if it is required.

**44:16 - 44:18**

Dileep Karri: Okay, a quick check with everyone.

**44:21 - 44:38**

Dileep Karri: Everybody, are you following? Okay? I try to keep it simple, nothing fancy, right? If you are able to, you know, follow this, right, we will take this, okay? I'll do a quick recap for anybody who is not able to follow, okay?

**44:38 - 44:46**

Dileep Karri: Before you kind of do this, right? Did everybody understand where or why we are doing this?

**44:47 - 44:53**

Dileep Karri: Okay? So, okay, let me just quickly recap what we are doing.

**44:53 - 45:03**

Dileep Karri: Number one point. What I want to do is, I want to set up a strong harness for my AI, so that it can work on my behalf.

**45:03 - 45:11**

Dileep Karri: To do good knowledge work on my behalf, I will need to give my AI some kind of powers.

**45:11 - 45:16**

Dileep Karri: Setting up that powers requires setting up a strong harness.

**45:17 - 45:23**

Dileep Karri: Right? And that harness in codex, I can set it up via

**45:23 - 45:28**

Dileep Karri: these installations. And what are these installations?

**45:28 - 45:31**

Dileep Karri: The installations I have set up are...

**45:32 - 45:38**

Dileep Karri: To set up the core documentation, I have added Context 7.

**45:38 - 45:41**

Dileep Karri: To actually search the web?

**45:41 - 45:49**

Dileep Karri: I have added parallel search, and to actually scrape websites, I have added Firecrawl.

**45:49 - 46:02**

Dileep Karri: Okay? So sometimes in the knowledge work or some tasks you ask AI to do, it will require to search the web and scrape the websites. Okay? For example, let us assume.

**46:02 - 46:09**

Dileep Karri: That, you know, how the product designer uses plot design, etc, etc.

**46:09 - 46:16**

Dileep Karri: I can copy this block, Okay, open chat GPT.

**46:16 - 46:18**

Dileep Karri: Open a new check.

**46:18 - 46:27**

Dileep Karri: Give the URL, And I'll say... Scrape the... URL with... Fire crawl.

**46:28 - 46:36**

Dileep Karri: And... explain, like, 5 years old.

**46:37 - 46:39**

Dileep Karri: the database.

**46:48 - 46:50**

Dileep Karri: Okay? So, I am saying...

**46:51 - 47:05**

Dileep Karri: I am using the Firecrawl to actually extract the website, so now it is using FireCrawl to scrape that website, read the website for me, and then summarize that website for me.

**47:06 - 47:12**

Dileep Karri: Similarly, I want to kind of give it powers to read a YouTube video.

**47:13 - 47:27**

Dileep Karri: Okay? For example, I'll go to Vaibhos S&T's YouTube channel, I'll pick up... maybe... This particular video.

**47:27 - 47:29**

Audio shared by Dileep Karri: Somewhere in China.

**47:32 - 47:33**

Dileep Karri: I'll copy this.

**47:36 - 47:40**

Dileep Karri: Okay? You see here, it was able to scrape this article.

**47:43 - 47:52**

Dileep Karri: Similarly, I can put a YouTube video and say, use... Y TDLP.

**47:52 - 47:55**

Dileep Karri: To scrape the transcript.

**47:55 - 47:59**

Dileep Karri: And give me a summary.

**48:03 - 48:18**

Dileep Karri: So once I give it that command, right, now AI is able to do this because I have set up the harness, the harness of YTDLP, the harness of, you know, setting up the MCP.

**48:19 - 48:29**

Dileep Karri: Okay? And how did I do that? I went to the particular URL, I copy the URL, and I say to ChatGPT, install this.

**48:29 - 48:34**

Dileep Karri: Okay? So, if you go back and check out my history.

**48:38 - 48:43**

Dileep Karri: Right? So, to install parallel search, I have just

**48:43 - 48:49**

Dileep Karri: copied the documentation URL, and I said, install parallel search MC.

**48:49 - 49:00**

Dileep Karri: FireCrawl MCP, I went to FireCrawl, I copied the one-click installation, prompt, and I asked it to install.

**49:00 - 49:06**

Dileep Karri: YTDLP, I went to GitHub, I copied the URL, and I asked it to install.

**49:08 - 49:17**

Dileep Karri: Okay? So, the more powerful the harness I set up, the more powerful my AI gets.

**49:17 - 49:23**

Dileep Karri: Is it now clear, everyone, what I am trying to show? What is it that I'm trying to build towards?

**49:27 - 49:27**

Dileep Karri: Yeah?

**49:30 - 49:40**

Dileep Karri: Okay, so we are going into some advanced territory here. Are you guys okay with this? Because we are going to go into some advanced territory, right?

**49:43 - 49:45**

Dileep Karri: Okay? C.

**49:46 - 50:01**

Dileep Karri: If you are thinking, why do I require this, etc, my point is, when you are, you know, working with websites in typical knowledge work, sometimes you'll have to read other websites. For example, if you're doing a compliance check.

**50:01 - 50:10**

Dileep Karri: You want to go to a government website, scrape the website, understand the compliance rules, so that they can be compared against.

**50:10 - 50:28**

Dileep Karri: Right? So that is the different kind. Again, Fire Crawl is for scraping websites, YTDLP is for scraping YouTube, right? There are different tools required for different things. My idea is, I cannot kind of set up the entire tools all through available.

**50:28 - 50:48**

Dileep Karri: But for my day-to-day learning, what are the tools that help me a lot, that I can show you. And that is why I showed you Context7, which can help in Vivek coding. I showed you FireCrawl, which can help you to scrape websites. YKDLP, which can help you to scrape YouTube, and look at this.

**50:49 - 51:07**

Dileep Karri: Okay, summary of the video also, it is there. So it has given me the summary of how the video shows how Chinese transfer stations resell access to models, etc. It has kind of given me the complete summary over here.

**51:08 - 51:15**

Dileep Karri: So, I am setting up this entire Artemis... Which is powerful.

**51:16 - 51:17**

Dileep Karri: Okay?

**51:17 - 51:19**

Dileep Karri: Now, question to all of you.

**51:21 - 51:25**

Dileep Karri: How many of you are overwhelmed with this harness setup?

**51:26 - 51:31**

Dileep Karri: You are finding it, oh my god, it is a little difficult for me to set up this harness.

**51:35 - 51:36**

Dileep Karri: Okay?

**51:40 - 51:41**

Dileep Karri: Right.

**51:41 - 51:44**

Dileep Karri: So, for those of you who are

**51:46 - 51:56**

Dileep Karri: Okay? Setting up this harness, and you find it difficult. There are a lot of people in the world who find this concept of harness difficult.

**51:57 - 52:14**

Dileep Karri: Okay, so basically what happens is, they say that, you know what, I'm trying to build this harness, I want to set up the harness. Setting up the harness involves me, you know, opening up my chat GPT, set up the full access mode.

**52:17 - 52:30**

Dileep Karri: Okay, then I have to copy-paste the URLs, then I have to install those particular tools, those particular skills. It feels a little bit overwhelming, all of this setup.

**52:30 - 52:36**

Dileep Karri: So therefore, companies thought Can I make the harness?

**52:40 - 52:41**

Dileep Karri: Invisible.

**52:44 - 52:44**

Dileep Karri: Ahmed.

**52:45 - 52:46**

Dileep Karri: Easy.

**52:47 - 52:51**

Dileep Karri: 2... Setup.

**52:51 - 53:02**

Dileep Karri: So that people who do not have, or who are kind of feel that this is too technical for me, is there a way for them to set this up?

**53:02 - 53:07**

Dileep Karri: Or help non-technical people set up this entire harpass.

**53:08 - 53:17**

Dileep Karri: That is where the next generation of apps have come into play, the prominent ones being Grokbot.

**53:18 - 53:21**

Dileep Karri: Which we are going to go into detail.

**53:22 - 53:28**

Dileep Karri: I will mention two other apps, which I'm not going to touch at all, but these are important

**53:29 - 53:33**

Dileep Karri: For your understanding, One is called Instinct.

**53:34 - 53:37**

Dileep Karri: And the other is Muse by Vetta.

**53:41 - 53:52**

Dileep Karri: Okay, this is the one we'll put a lot of focus on, but basically, you are... the companies are trying to make the harness invisible.

**53:52 - 53:59**

Dileep Karri: And ensuring that it gets easy for me to work with, it gets easy for me to set up.

**54:04 - 54:14**

Dileep Karri: Everybody, do you understand the motivation of why we need to learn Grokbot? In Grokbot slash Instinct slash Muse by meta.

**54:15 - 54:21**

Dileep Karri: Okay? Setting the app up, making it work for you becomes super easy.

**54:23 - 54:29**

Dileep Karri: Alright, so now let us go a little bit of detail into the Gropbox.

**54:33 - 54:38**

Dileep Karri: Okay? So... Thumbs up if you're following so far. Are we good?

**54:44 - 54:44**

Dileep Karri: Huh.

**54:45 - 54:54**

Dileep Karri: So now, we will try to set up and set up the installation for Grokpot. Before that, just let us understand this once again.

**54:54 - 55:03**

Dileep Karri: Harness is like the cockpit, the pilot is the model, and the job is to take it to point A to point B.

**55:03 - 55:18**

Dileep Karri: So you need the best pilot, you need a best cockpit working hand-in-hand for your AI to actually do particular jobs. What you saw till now was in ChatGPT app, I built a simple harness

**55:18 - 55:26**

Dileep Karri: of it, trying to, you know, scrape YouTube off it, trying to set up

**55:27 - 55:36**

Dileep Karri: the documentation, context 7, of it, trying to, you know, set up a parallel search so that it can search the internet.

**55:37 - 55:46**

Dileep Karri: Okay? So, all of this, right, it forms the acronym PILOT, which is the key feature of any harness.

**55:46 - 55:51**

Dileep Karri: First, permission. What is the harness allowed to do?

**55:51 - 56:06**

Dileep Karri: Second is information. What information that you need to provide so that your harness works very well? Or what the job that you're trying to make the harness do with the AI,

**56:06 - 56:20**

Dileep Karri: What are the pieces of information that is required, which you might give us context, or which you might import as other places from other apps, that it can work?

**56:20 - 56:27**

Dileep Karri: How many times should it attempt if it is not able to do a particular task? You don't want your

**56:28 - 56:36**

Dileep Karri: AI to run an infinite loop where it is like, unless, until I finish this, I will keep running.

**56:36 - 56:43**

Dileep Karri: Then what'll happen? It'll run into an infinite loop, and you will see that the AI is unable to finish the job.

**56:44 - 56:55**

Dileep Karri: Then, operations. What are the things... what are the operations involved? Like, what are the tools you might give? What are the, you know, the different things you are trying to give?

**56:56 - 56:57**

Dileep Karri: Then, test.

**56:57 - 57:06**

Dileep Karri: how would you test out whether it is working properly, it is working correctly, etc. So this is a portion of a harness.

**57:06 - 57:17**

Dileep Karri: And when we come to GrokBot, we will understand how this pilot framework kind of comes in, okay? Now, PILOT is like an acronym I have put in myself, it is not the

**57:18 - 57:30**

Dileep Karri: universal thing, so don't think this is something universal out there. I put this acronym so that it is easy for you to understand what are the different features of the harness that you're trying to set up.

**57:30 - 57:41**

Dileep Karri: Okay? So for apps where security is very tight, like Muse, they are very, very... they have actually did a lot of work on security.

**57:42 - 57:46**

Dileep Karri: There, the testing part is where they put in a lot of effort.

**57:47 - 57:48**

Dileep Karri: Okay?

**57:50 - 57:57**

Dileep Karri: So now, I kind of showed how does any of this work, right? So the typical way it works is.

**57:58 - 58:02**

Dileep Karri: When I give AI plus harness, you give it a job.

**58:03 - 58:10**

Dileep Karri: Then the AI decides what is the next step, what next step happens, what next step happens, what next step happens.

**58:11 - 58:15**

Dileep Karri: Something outside the AI runs that step, so this is how it is.

**58:15 - 58:18**

Dileep Karri: You'll give EA a job.

**58:18 - 58:29**

Dileep Karri: Then, the AI models decides what's the next step is. Then, the step which has been decided by AI is run by something else, which is part of your harness.

**58:30 - 58:33**

Dileep Karri: Then AI reads the result and decides the next step.

**58:34 - 58:41**

Dileep Karri: So, the step 3, is done by the harness. Step 2 and step four is done by AI.

**58:41 - 58:59**

Dileep Karri: So, AI model, which is your OPUS, which is your ChatGPT, etc, it decides the next step. It reads the result of the previous step and decides what the next step should be. So, it is a brain which decides what are the path.

**59:00 - 59:07**

Dileep Karri: In the path, what should happen, right? Suppose you say, I reach a tree, now I have to climb the tree.

**59:07 - 59:21**

Dileep Karri: or I reach a bridge. I have to cross the bridge. Okay? Once you come to the bridge, what to do? Okay, should you cross the bridge? Should you jump over the bridge? Should you break the bridge? That is what AI decides.

**59:21 - 59:25**

Dileep Karri: Then... Crossing the bridge is done by harness.

**59:25 - 59:39**

Dileep Karri: The AI told, cross the bridge, then the harness will make you the cross the bridge. Then, after that, harness tells, I have crossed the bridge, what next? Then AI looks at the surroundings and decides, okay, this is what to do next.

**59:41 - 59:45**

Dileep Karri: Okay? Before I proceed, everybody, clear.

**59:46 - 59:51**

Dileep Karri: Do you understand how AI and the harness work together right now?

**59:52 - 59:59**

Dileep Karri: Once again, this concept is very important. The agent, when people say AI agent.

**59:59 - [01:00:07]**

Dileep Karri: When you learned about AI Agent on day 4, when Vaibh talked to you about different AI agents occurring.

**[01:00:07] - [01:00:22]**

Dileep Karri: Right? What they have been trying to say is nothing but AI agent... Equal to model plus harness

**[01:00:24] - [01:00:27]**

Dileep Karri: Model plus Harness is your AI agent.

**[01:00:27] - [01:00:28]**

Dileep Karri: Iron?

**[01:00:29] - [01:00:34]**

Dileep Karri: The model decides The next step?

**[01:00:35] - [01:00:38]**

Dileep Karri: Harness executes the step.

**[01:00:43] - [01:00:45]**

Dileep Karri: This is the pilot.

**[01:00:46] - [01:00:48]**

Dileep Karri: This is the cook.

**[01:00:53] - [01:01:05]**

Dileep Karri: If ever you were confused about why exactly AI Agent, what is exactly happening, this picture should, you know, kind of help you understand it very clearly.

**[01:01:05] - [01:01:06]**

Dileep Karri: Alright.

**[01:01:06] - [01:01:12]**

Dileep Karri: The innovation right now, if you see, model innovation is happening.

**[01:01:13] - [01:01:17]**

Dileep Karri: But the model innovation is done only by a few people.

**[01:01:17] - [01:01:20]**

Dileep Karri: What are rest of the companies doing?

**[01:01:20] - [01:01:23]**

Dileep Karri: They are focused here.

**[01:01:26] - [01:01:30]**

Dileep Karri: Okay? For example, an app called Lovable.

**[01:01:31] - [01:01:32]**

Dileep Karri: or BOLD.

**[01:01:34] - [01:01:44]**

Dileep Karri: What are they exactly doing? They are working on the harness so that the model which is working can build a good app for the user.

**[01:01:45] - [01:01:47]**

Dileep Karri: Can they set up the harness?

**[01:01:48] - [01:01:55]**

Dileep Karri: Properly, so that when users are actually building the apps, they can build the app well.

**[01:01:57] - [01:02:12]**

Dileep Karri: Okay? So the rest of the companies are building elements of the harness, like Parallel is building the Agentic search, so that it can become an important part of Harness for AI to search the internet.

**[01:02:18] - [01:02:26]**

Dileep Karri: Everybody clear? Do you understand the concept? Things coming together? What you saw on day 4? What you saw on day 7?

**[01:02:26] - [01:02:31]**

Dileep Karri: Right? Things coming together, are you able to understand this clearly right now?

**[01:02:38] - [01:02:50]**

Dileep Karri: Alright, so now that we have an understanding of this entire thing of model plus harness, where model decides the next step, and harness executes the step.

**[01:02:51] - [01:02:52]**

Dileep Karri: Okay?

**[01:02:54] - [01:02:55]**

Dileep Karri: You know that?

**[01:02:56] - [01:02:57]**

Dileep Karri: the step of...

**[01:02:58] - [01:03:04]**

Dileep Karri: 3 is always done by the harness. Step 2 and step four is done by your AI nerd.

**[01:03:04] - [01:03:11]**

Dileep Karri: Okay? So, what are the different things that the cockpit kind of gives a pilot?

**[01:03:12] - [01:03:22]**

Dileep Karri: It gives standing orders, okay? Standing orders could be, like, the custom instructions. Remember day one, custom instructions? So, standing orders, always do this.

**[01:03:23] - [01:03:26]**

Dileep Karri: Day one custom instructions, part of your harvest.

**[01:03:27] - [01:03:29]**

Dileep Karri: Read, write, search, click.

**[01:03:29] - [01:03:31]**

Dileep Karri: Okay, those hands.

**[01:03:31] - [01:03:36]**

Dileep Karri: What can be seen from the flight window? What altitude? What...

**[01:03:36] - [01:03:39]**

Dileep Karri: Elevation. What is the wind speed? Ice.

**[01:03:40] - [01:03:44]**

Dileep Karri: Okay? Stop signs, what it has to ask you.

**[01:03:44] - [01:03:51]**

Dileep Karri: check. What need to check, okay? So the cockpit and the pilot work in tandem for a safe journey.

**[01:03:52] - [01:03:55]**

Dileep Karri: Your pilot is drunk, plane will crash.

**[01:03:55] - [01:04:01]**

Dileep Karri: Your pilot is alert, yet your cockpit is, having a problem, plane will crash.

**[01:04:02] - [01:04:05]**

Dileep Karri: So you need a good model, as well as a good harvest.

**[01:04:07] - [01:04:23]**

Dileep Karri: Okay? So, again, whatever custom instructions that you have written, whatever instructions you have written in ChatGPT projects, etc, etc, those become like standing instructions, which is like a sticky note for your harness or AI.

**[01:04:25] - [01:04:44]**

Dileep Karri: Okay? So, the reason why you have got Grokbot is, it is the friendliest AI product where the harness is designed in the most simplistic manner. So, without further ado, let us go into Grokbot directly and try to access.

**[01:04:44] - [01:04:56]**

Dileep Karri: Now, Grokbot is available in different plans, okay? So, either you can go to you know,

**[01:04:56] - [01:04:58]**

Dileep Karri: You can go to Grok Plants.

**[01:05:01] - [01:05:05]**

Dileep Karri: You can go to Grok.com paid plans.

**[01:05:07] - [01:05:17]**

Dileep Karri: Okay? And here, you can look at, on the individual level, if you are on the super Grok plan, you have some access to

**[01:05:17] - [01:05:25]**

Dileep Karri: But the limits of how much you can have access to, that keeps changing dependent on which plan you're subscribed to.

**[01:05:26] - [01:05:29]**

Dileep Karri: So, Grokbot is available on the...

**[01:05:29] - [01:05:35]**

Dileep Karri: \$20 plan of Super Grok, as well as the \$300 plan also.

**[01:05:36] - [01:05:41]**

Dileep Karri: And even on cursor plans. So, Cursor is a platform for wire coding.

**[01:05:41] - [01:05:55]**

Dileep Karri: On cursor plans also, if you take the \$30 plan or the \$60 plan, Grok Bot is bundled. So, either you take Grok paid plan or cursor paid plan, you get Grok Bot.

**[01:05:56] - [01:06:03]**

Dileep Karri: Thumbs up if it is clear. You take kaosar paid plan, or the Grok paid plan, you get access to Grok.

**[01:06:05] - [01:06:13]**

Dileep Karri: Okay? Once you get access to GrokBot, this is the interface to GrokBot, okay?

**[01:06:20] - [01:06:25]**

Dileep Karri: This is the interface to GrokBot, very simple, very minimal.

**[01:06:25] - [01:06:32]**

Dileep Karri: Okay? And the idea behind, or the Grok bot, is AI employee.

**[01:06:33] - [01:06:37]**

Dileep Karri: With Grokbot, you build AI employees.

**[01:06:37] - [01:06:44]**

Dileep Karri: And for a particular task that you have, you decide to build a particular employee.

**[01:06:44] - [01:06:49]**

Dileep Karri: Okay, so let us now try to build an AI employee.

**[01:06:49] - [01:06:53]**

Dileep Karri: And for that, you can click on plus.

**[01:06:53] - [01:06:57]**

Dileep Karri: And I can say, create a new pot.

**[01:07:09] - [01:07:17]**

Dileep Karri: Okay, so here is the new bot. What do you want, mainly, help with? So, you have to give the use case of what you want to do.

**[01:07:18] - [01:07:21]**

Dileep Karri: Now, let us suppose my use case is...

**[01:07:22] - [01:07:34]**

Dileep Karri: a proper Twitter and YouTube research on a particular topic, okay? I want to do Twitter and YouTube research on a particular topic, and give me a summary.

**[01:07:35] - [01:07:44]**

Dileep Karri: So I'll say, I want to do... Twitter, And... YouTube research.

**[01:07:45] - [01:07:47]**

Dileep Karri: On a particular topic.

**[01:07:50] - [01:07:54]**

Dileep Karri: And summarize... the fightings.

**[01:07:57] - [01:07:58]**

Dileep Karri: I will submit.

**[01:08:08] - [01:08:09]**

Dileep Karri: Okay?

**[01:08:09] - [01:08:12]**

Dileep Karri: So they're asking, what topic should I dig into?

**[01:08:12] - [01:08:18]**

Dileep Karri: I say not that. I want to build... a new art.

**[01:08:19] - [01:08:21]**

Dileep Karri: Which can do that.

**[01:08:34] - [01:08:48]**

Dileep Karri: So, it is saying, okay, you want a dedicated bot for Twitter and YouTube research, setting up now with a research-focused brief. So, you see, there is a social research bot that is getting built.

**[01:08:50] - [01:08:51]**

Dileep Karri: Okay?

**[01:08:53] - [01:08:54]**

Dileep Karri: So, here you see...

**[01:08:55] - [01:09:01]**

Dileep Karri: created Social Research, a bot set up to dig into Twitter and YouTube on a topic.

**[01:09:02] - [01:09:05]**

Dileep Karri: And summarize what it finds.

**[01:09:06] - [01:09:07]**

Dileep Karri: Okay?

**[01:09:11] - [01:09:16]**

Dileep Karri: Alright, so what should I research on? Okay, so let us do a simple research.

**[01:09:16] - [01:09:27]**

Dileep Karri: Where I would say... Things like... Vyas Singhi's... Thoughts on AGA?

**[01:09:27] - [01:09:31]**

Dileep Karri: Okay? Vaibhua kind of talked slightly about it on Sunday.

**[01:09:31] - [01:09:34]**

Dileep Karri: And we will have a separate session on AGI.

**[01:09:35] - [01:09:40]**

Dileep Karri: as part of your bonus, but let us say I want to do a research on that. I will submit.

**[01:09:41] - [01:09:55]**

Dileep Karri: So here, if you see, it is task first. I have not given any harness, I have not given anything. I am asking it to do. There is a lot of harness built underneath that will help me execute this.

**[01:10:00] - [01:10:09]**

Dileep Karri: So, it will take, Vaibhosnti's AGI takes from Yaks in YouTube and summarize what he's saying and how people are reacting.

**[01:10:15] - [01:10:17]**

Dileep Karri: So, this is the main thing about Grokbot.

**[01:10:18] - [01:10:30]**

Dileep Karri: Every crown bot, a bot is an employee. An employee is meant for a specific task, and you define the task clearly, and you can, you know, kind of do this.

**[01:10:33] - [01:10:40]**

Dileep Karri: So, there is a Appify connector available, so you can see Marketplace, in the marketplace.

**[01:10:40] - [01:10:44]**

Dileep Karri: I can search for different connectors. So, I have these connectors.

**[01:10:46] - [01:10:50]**

Dileep Karri: Okay, it is, you know... It has failed.

**[01:10:51] - [01:10:52]**

Dileep Karri: For some reason.

**[01:11:01] - [01:11:02]**

Dileep Karri: Okay?

**[01:11:02] - [01:11:07]**

Dileep Karri: Let us leave it for now, and then I'll explain how Grokbot typically works.

**[01:11:10] - [01:11:11]**

Dileep Karri: There you go.

**[01:11:13] - [01:11:15]**

Dileep Karri: Vaibos isn't AGI view.

**[01:11:15] - [01:11:18]**

Dileep Karri: key findings, how he defines AGI,

**[01:11:19] - [01:11:25]**

Dileep Karri: Then, AI 2027 framing, etc. Some YouTube primary sources, all of that.

**[01:11:26] - [01:11:31]**

Dileep Karri: then X didn't load here, etc. Okay?

**[01:11:32] - [01:11:38]**

Dileep Karri: how can I node X post of... Vaibhua

**[01:11:42] - [01:11:47]**

Dileep Karri: So it is saying that X did not load here, something was blocked. How can we unblock it?

**[01:12:00] - [01:12:07]**

Dileep Karri: So, GrokBot, the way it works is, it has the own...

**[01:12:08] - [01:12:12]**

Dileep Karri: So, it is saying this, I'll say this again.

**[01:12:17] - [01:12:28]**

Dileep Karri: So, what it does is, this entire Grokbot, when you install, there is a cloud computer that is dedicated to your Grokbot account.

**[01:12:28] - [01:12:34]**

Dileep Karri: That means if I open my Grok bot, I have a cloud computer that is dedicated to me.

**[01:12:35] - [01:12:41]**

Dileep Karri: on that cloud computer is where I am setting up this entire, you know.

**[01:12:41] - [01:12:52]**

Dileep Karri: I am setting up this entire system. So it is asking me the Appify token, okay? So let me provide that token, see if I'm able to set it up.

**[01:12:56] - [01:13:11]**

Dileep Karri: So what I'll do is I'll go to Appify. Inside Appify, I have the API key section. From the API key section, I will, you know, kind of go ahead and, you know, kind... I'll...

**[01:13:17] - [01:13:20]**

Dileep Karri: I will get the app API keys.

**[01:13:20] - [01:13:28]**

Dileep Karri: Okay, so, settings... So I'm kind of keeping it off, because these are, You're all.

**[01:13:30] - [01:13:34]**

Dileep Karri: These are API keys, you should never reveal your API keys.

**[01:13:40] - [01:13:43]**

Dileep Karri: Now I have pasted my API key.

**[01:13:43] - [01:13:45]**

Dileep Karri: Now I can share.

**[01:13:51] - [01:13:53]**

Dileep Karri: Okay, Aysha saves securely.

**[01:13:58] - [01:14:06]**

Dileep Karri: So, I have given the Appify's API key, so now it is going to scrape Vibhusi's

**[01:14:07] - [01:14:16]**

Dileep Karri: Twitter, and get me the thing. So here, what it has happened is, it said that it has prompted me what harness is required.

**[01:14:17] - [01:14:21]**

Dileep Karri: And it is telling me this is required for you to do this task.

**[01:14:22] - [01:14:37]**

Dileep Karri: In codecs and everything, I have to imagine what is the harness I have to design, whereas in this case, it will tell me what is the harness it will require, and it will ask me multiple things into impact.

**[01:14:38] - [01:14:48]**

Dileep Karri: Second difference, in ChatGPT, Cloud Desktop, etc, it is on my system, whereas for GrokBot, it is not my system.

**[01:14:48] - [01:14:59]**

Dileep Karri: It is a dedicated cloud system that it has access to. On that cloud system, all these installations are taking place. It is not happening on my local system.

**[01:15:04] - [01:15:13]**

Dileep Karri: Still, there is a problem, it is fixing it, but that is how it goes. So it will try to figure out what is the harness, how to fix it, and it'll work.

**[01:15:14] - [01:15:29]**

Dileep Karri: The other important part about Grokbot is you cannot change the model, you cannot say, you know what, you cannot change the model and use a different model. It will use the Grok models which have been created.

**[01:15:30] - [01:15:40]**

Dileep Karri: In ChatGPT Cloud, you can change between multiple models, but for Grokbot, you can only use the Grok models, which were given as access.

**[01:15:45] - [01:15:59]**

Dileep Karri: Okay, so just to recap, what I did was, I said on the new bot, hey, I want to kind of do social research, so that when I give a topic, it should scrape, do the research, and then try to help me out.

**[01:15:59] - [01:16:12]**

Dileep Karri: Okay, so then it did what it could do, bases the open research, and then when I said I want to scrape the Twitter account, it asked me to give the Appify API key.

**[01:16:12] - [01:16:24]**

Dileep Karri: Once I gave the Appify API key, it has, you know, tried to now scrape Vaibh S&T and search on the AGA-rated tweets and give me a better outcome.

**[01:16:28] - [01:16:39]**

Dileep Karri: Now, as it is running, I can ask it questions. Did you do... a YouTube... Search... and scrape.

**[01:16:40] - [01:16:43]**

Dileep Karri: recent... videos.

**[01:16:46] - [01:16:47]**

Dileep Karri: Playbook.

**[01:16:49] - [01:16:55]**

Dileep Karri: So, in a way, here, my entire setup is via conversation. So, on Grokbot.

**[01:16:56] - [01:17:09]**

Dileep Karri: All I'm doing is, I'm doing conversations, and then the harness in Grokbot will kind of do this. Okay? I haven't APFI scraped this YouTube yet, I used only web search plus

**[01:17:09] - [01:17:18]**

Dileep Karri: one long interview transcript. Want me to scrape videos from Vaibav with Appify now, and then try to do this.

**[01:17:18] - [01:17:24]**

Dileep Karri: Okay? I will say, do both. Run YouTube and finish X in parallel.

**[01:17:27] - [01:17:32]**

Dileep Karri: So, I ask it to do, it will find ways to do that.

**[01:17:37] - [01:17:51]**

Dileep Karri: Okay? As it is running, you don't have to wait on top of it. You can go back and continue working on, say, a new bot. Okay? So this is like a social research bot that you were working with.

**[01:17:51] - [01:18:00]**

Dileep Karri: Suppose you wanted a new bot which can do something very, very different, okay? So, let us take examples from you.

**[01:18:00] - [01:18:14]**

Dileep Karri: Suggest me some bot ideas, okay? I have opened the chat. Give me some bot ideas, so that I can pick up one of the ideas that you are giving, and then I can use those bot ideas Amit.

**[01:18:16] - [01:18:31]**

Dileep Karri: email, book Uber, data analysis, job search, Find free models, ticket booking, cartoon videos, Right? Research on stock market.

**[01:18:31] - [01:18:37]**

Dileep Karri: Right? Video generator, content generator, Et cetera, et cetera.

**[01:18:37] - [01:18:37]**

Dileep Karri: Okay.

**[01:18:41] - [01:18:52]**

Dileep Karri: Cool. I think one part is, everybody's asking is on, like, a job scraper, right? So let us try to do, like, a job scraper overall.

**[01:18:55] - [01:18:59]**

Dileep Karri: So what I can do is, I can open a new chat.

**[01:18:59] - [01:19:01]**

Dileep Karri: I'll say, create a new bot.

**[01:19:10] - [01:19:15]**

Dileep Karri: I want to build... a jobs scraper.

**[01:19:24] - [01:19:34]**

Dileep Karri: Okay? So, I want to build a job scraper. Which site should it pull from? What roles or keywords are you hunting? So, you'll have to set it up.

**[01:19:37] - [01:19:47]**

Dileep Karri: Now, suppose you are... I am non-technical, So, can you... Interview me?

**[01:19:49] - [01:19:53]**

Dileep Karri: Gather my... requirements properly.

**[01:19:55] - [01:20:02]**

Dileep Karri: and build... this... scraper... forward.

**[01:20:09] - [01:20:16]**

Dileep Karri: So I said, I want to build this job scraper, but non-technical, gather my requirements and build a scraper for me.

**[01:20:20] - [01:20:24]**

Dileep Karri: Okay? So, no TikTok. Where do you usually look for jobs today?

**[01:20:25] - [01:20:36]**

Dileep Karri: I will say, wherever... I can find... suitable... Job... for myself.

**[01:20:37] - [01:20:39]**

Dileep Karri: I... Fight.

**[01:20:41] - [01:20:49]**

Dileep Karri: low, based on... My profile, you narrow down.

**[01:20:51] - [01:20:52]**

Dileep Karri: the sources.

**[01:20:53] - [01:21:01]**

Dileep Karri: So, for my job, I'll say wherever I can find, I will pick the sources, once I know your profile.

**[01:21:03] - [01:21:08]**

Dileep Karri: Okay, so what I'll do is, very simple, I will not strain my brain.

**[01:21:08] - [01:21:12]**

Dileep Karri: I will go to... my LinkedIn.

**[01:21:17] - [01:21:19]**

Dileep Karri: I'll copy my LinkedIn URL.

**[01:21:23] - [01:21:28]**

Dileep Karri: This is my... Profile.

**[01:21:28] - [01:21:29]**

Dileep Karri: Go figure.

**[01:21:40] - [01:21:46]**

Dileep Karri: Okay, so let it find my LinkedIn, dig into it. In the meanwhile, we can check here what is happening.

**[01:21:47] - [01:21:56]**

Dileep Karri: Okay? So, 80 posts are scraped, 28 are AGA-related from Vaibh, YouTube, 76 channel items scraped.

**[01:21:56] - [01:22:01]**

Dileep Karri: Right? These are the different, ones overall. What next?

**[01:22:06] - [01:22:17]**

Dileep Karri: I will say, can you combine the research... And give a... right up.

**[01:22:19] - [01:22:24]**

Dileep Karri: Giving me... the... Important.

**[01:22:26] - [01:22:27]**

Dileep Karri: Boys.

**[01:22:27] - [01:22:31]**

Dileep Karri: for future... France?

**[01:22:32] - [01:22:34]**

Dileep Karri: It should do the same.

**[01:22:37] - [01:22:39]**

Dileep Karri: Ask clarifying questions.

**[01:22:43] - [01:22:56]**

Dileep Karri: So I want to give feedback to the bot, saying that whatever you have, try to, you know, summarize everything into one write-up, and saving that flow so that future runs will follow the same pattern.

**[01:23:00] - [01:23:06]**

Dileep Karri: So, on your side, you will not have, like, how ChatGPT and,

**[01:23:07] - [01:23:23]**

Dileep Karri: Claude has. ChatGPT and Claude has, you know, the chat voice conversation. You will not have chat-wise, but you will have employee-wise. So your different Grok bots are present. So now it is asking me.

**[01:23:23] - [01:23:27]**

Dileep Karri: For future creative briefs, how should I set a scope?

**[01:23:29] - [01:23:30]**

Dileep Karri: Okay?

**[01:23:30] - [01:23:35]**

Dileep Karri: I would say, ask me, the... each type.

**[01:23:36] - [01:23:39]**

Dileep Karri: Okay, so that I can set the scope of what is required.

**[01:23:47] - [01:24:06]**

Dileep Karri: Alright, here is a question. Here is what I pulled from your profile, Dileep. You are in Bangalore, about 16 years in, head of JANA education at Outskill, plus a lot of this. I deferred sources, I lean on LinkedIn, Nagri, Wellfound, and InstaHire. Okay, next, what kind of role you are up to?

**[01:24:06] - [01:24:10]**

Dileep Karri: Let us say similar leadership. Okay, I'll go for this.

**[01:24:11] - [01:24:12]**

Dileep Karri: I submit.

**[01:24:15] - [01:24:26]**

Dileep Karri: Here, next time, I will ask scope first, run Appify, and return some same important points right up via Creator Topic research brief.

**[01:24:28] - [01:24:38]**

Dileep Karri: So it has built a skill for me where it will create the topic research, the goal, what are the steps, etc, without me building it.

**[01:24:38] - [01:24:53]**

Dileep Karri: So Grok bot, the harness is powerful so that it understood that this is what the user requires, and therefore, it has built a skill, so that the next time I'm using this for a new topic, it will give me that. So let us ask a new topic.

**[01:24:53] - [01:24:57]**

Dileep Karri: I will say Grok... 4.7.

**[01:24:57] - [01:24:58]**

Dileep Karri: replicate.

**[01:25:01] - [01:25:02]**

Dileep Karri: That is a topic.

**[01:25:07] - [01:25:11]**

Dileep Karri: Okay? X or Twitter, I would say...

**[01:25:14] - [01:25:22]**

Dileep Karri: For Gus... On last two days, X and YouTube.

**[01:25:25] - [01:25:30]**

Dileep Karri: Okay, because last two days only it has come up, so I'll ask it to focus.

**[01:25:34] - [01:25:35]**

Dileep Karri: Concerning?

**[01:25:36] - [01:25:42]**

Dileep Karri: Where should you look jobs? I would say... open anywhere.

**[01:25:49] - [01:25:55]**

Dileep Karri: How should I deliver? You is somebody.

**[01:25:55] - [01:25:56]**

Dileep Karri: In chart.

**[01:26:02] - [01:26:14]**

Dileep Karri: how often? Just once for now. Later, we can set it up. So if you want to run it automatically, you can say run it every day in the morning. Grok bot will automatically run for you.

**[01:26:14] - [01:26:26]**

Dileep Karri: See, in Grokbot, when you shut down your system, don't assume that the Grokbot is also shut down. Grokbot, because it has its own cloud computer, Grokbot is always running.

**[01:26:26] - [01:26:35]**

Dileep Karri: for your Codex, ChatGPT, or your cloud automations, whenever you're setting automations, it always

**[01:26:35] - [01:26:51]**

Dileep Karri: you know, kind of runs on a schedule, right? So, in this case, what happens is, if you shut down your laptop, that automation will not run, but in case of Grokbot, it will run on the cloud.

**[01:26:53] - [01:26:57]**

Dileep Karri: Okay, to spend a few rupees, I will say keep it smaller right now.

**[01:27:01] - [01:27:12]**

Dileep Karri: That's why scraping is important, right? People ask me why scraper is important as part of your harness, because if you have a scraper, the amount of things you can do will increase.

**[01:27:12] - [01:27:24]**

Dileep Karri: Otherwise, it'll always be focused on open web search, which will give you very limited entries, whereas Scraper will help you scrape everything and try to build it out.

**[01:27:27] - [01:27:35]**

Dileep Karri: Okay? Pulse check, everyone. Have you understood the main concept of GrokBot? How you can build new bots?

**[01:27:35] - [01:27:47]**

Dileep Karri: how you can give the feedback, and how it is very easy. No complex harness, nothing. You just explain what you want, and it will, you know, do this.

**[01:27:54] - [01:27:55]**

Dileep Karri: Others?

**[01:27:55] - [01:27:56]**

Dileep Karri: Good.

**[01:27:58] - [01:28:03]**

Dileep Karri: So, what, you need to understand is.

**[01:28:03] - [01:28:16]**

Dileep Karri: Grok bot will have its own internal... it has some harness internally, but the rest of it, you will have to set up. How you will set it up? Again, same process. Go to Marketplace.

**[01:28:16] - [01:28:21]**

Dileep Karri: In the marketplace, you have the plugins.

**[01:28:22] - [01:28:27]**

Dileep Karri: From different plugins you have available, you can install those plugins.

**[01:28:28] - [01:28:29]**

Dileep Karri: Okay?

**[01:28:29] - [01:28:37]**

Dileep Karri: And if you want to build a skill, you explain, I want to build this particular skill, and you can build out that particular skill.

**[01:28:40] - [01:28:47]**

Dileep Karri: Okay? One, it has also called... got feature bots, where it can build a new bot for you.

**[01:28:48] - [01:28:54]**

Dileep Karri: For example, one of the most important parts is this Dr. Eggbot.

**[01:28:55] - [01:29:02]**

Dileep Karri: Okay? What it can do is, it can help you build very good quality Grok books.

**[01:29:03] - [01:29:12]**

Dileep Karri: Okay, so it is like a... how you have skill creator, which can create skills. This is a pot creator, which can create pots.

**[01:29:13] - [01:29:15]**

Dileep Karri: So, I will import this bot.

**[01:29:19] - [01:29:27]**

Dileep Karri: Okay, once I import the bot, the bot gets installed. After that, any new bots I'm trying to build, I can build it over here.

**[01:29:34] - [01:29:42]**

Dileep Karri: So my Job Scraper bot is doing its first run, and I have my, you know, the egg bot.

**[01:29:42] - [01:29:51]**

Dileep Karri: which is setting first time, and then it'll kind of set itself up and ask me what kind of bot I want to create.

**[01:29:59] - [01:30:05]**

Dileep Karri: Okay? Now, this, again, the thing is...

**[01:30:07] - [01:30:13]**

Dileep Karri: I am Dr. Eggbot, I spin up Grok bots, one job, one voice, no leftover tools.

**[01:30:13] - [01:30:31]**

Dileep Karri: Okay? So, what bot are we making? Help me do this. Okay? Coding... if you want to build coding bots, you'll have to install this workflow, everything. So, I'll skip for now. Later on, I will maybe install whatever it is required. I'll just submit it. I'll skip for now.

**[01:30:32] - [01:30:41]**

Dileep Karri: Now, here, I can ask Eggbot to kind of build a particular bot for me, and it can build those bots that I require.

**[01:30:46] - [01:30:52]**

Dileep Karri: Okay, so here you go. It has given me Grok 4.7 Research Brief.

**[01:30:52] - [01:31:05]**

Dileep Karri: Okay? It has given me the complete research brief all through, right? And in fact, if I have any follow-ups that I want to do, I can select the follow-up, or I can say, stop here.

**[01:31:07] - [01:31:12]**

Dileep Karri: Okay, so there is an internal harness already present for Grokbot.

**[01:31:12] - [01:31:23]**

Dileep Karri: Where you can spin up multiple AI employees, which can work for you, and because the harness is very, very hidden, you don't have to check all of that.

**[01:31:23] - [01:31:42]**

Dileep Karri: The problem with that also, I'll tell you, it has got extremely limited plugins you can connect, so you'll have to check what our plugins are available, only those you can connect. But again, still, because it is new in the ecosystem, I know that they will add more and more plugins as we grow.

**[01:31:43] - [01:31:44]**

Dileep Karri: Okay?

**[01:31:44] - [01:32:00]**

Dileep Karri: All right, we'll take a quick 5-minute break now. After 5 minutes, we will come back, we will learn a little bit more about Grokbot, and then we have worked on the cockpit part, okay, where I showed you a different cockpit of Grokbot.

**[01:32:00] - [01:32:05]**

Dileep Karri: Then, I will come back, and I'll show you how you can change the pilot.

**[01:32:05] - [01:32:14]**

Dileep Karri: So, okay, that means how you can use local AI models inside your ChatGPT.

**[01:32:14] - [01:32:16]**

Dileep Karri: That will come after break.

**[01:32:17] - [01:32:19]**

Dileep Karri: All right? Yeah, 65 Library, please.

**[01:32:20] - [01:32:22]**

Shasti: Yeah, surely look.

**[01:37:50] - [01:37:52]**

Dileep Karri: Hi everyone, hope you're back.

**[01:37:57] - [01:38:03]**

Dileep Karri: I had a good break. I gargled, and I caught out everything off my...

**[01:38:03] - [01:38:06]**

Dileep Karri: Throw to that it is ready for the next few minutes.

**[01:38:08] - [01:38:08]**

Dileep Karri: Right?

**[01:38:09] - [01:38:11]**

Dileep Karri: Alright, so let's resume.

**[01:38:15] - [01:38:28]**

Dileep Karri: All right, so what have we done so far, okay? Important points. AI agent equal to model plus harness, where the model is the pilot, and the harness is the cockpit.

**[01:38:28] - [01:38:36]**

Dileep Karri: And, we talked about how you need a strong cockpit on your AI models, so it can work very well.

**[01:38:36] - [01:38:55]**

Dileep Karri: When we started, we tried to build a harness for our ChatGPT, where we talked about Context7, a tool for code documentation. Then you have search, parallel search, then you have scraper for scraping websites.

**[01:38:55] - [01:39:11]**

Dileep Karri: Then, you also have Appify for YouTube or IG scraping. If you want an alternative to Appify, which is free, you can consider YTDLP, which can be used free for scraping, etc, and all that.

**[01:39:12] - [01:39:27]**

Dileep Karri: Then, we spoke about how your harness has to be sometimes invisible, so that other people can also, you know, use it properly overall, and that is why you try to set this up.

**[01:39:27] - [01:39:35]**

Dileep Karri: So... When you work with Harness, right, some other pods, which will be very, very important.

**[01:39:35] - [01:39:39]**

Dileep Karri: Memory will be an important part of Artemis.

**[01:39:40] - [01:39:42]**

Dileep Karri: tools... Important.

**[01:39:43] - [01:39:45]**

Dileep Karri: Skills is also.

**[01:39:46] - [01:39:48]**

Dileep Karri: Important part of your harness.

**[01:39:48] - [01:39:59]**

Dileep Karri: Okay? Now, some people are innovating on the harness part, making it invisible. That is where GrokBot has kind of come in.

**[01:39:59] - [01:40:14]**

Dileep Karri: These places where you are now, using Grokbot, So that you can... have a simple RMS setup.

**[01:40:19] - [01:40:30]**

Dileep Karri: Now, the immediate question I know people have is, when should I use GroveBot? When should I use ChatGPT? Thumbs up if you have this question at the back of your mind.

**[01:40:30] - [01:40:34]**

Dileep Karri: When should I use Grokbot? When should I use ChatG?

**[01:40:35] - [01:40:41]**

Dileep Karri: Okay? Again, you are falling into the trap. I said, everyone is a harness.

**[01:40:41] - [01:40:46]**

Dileep Karri: Okay? It depends upon your ease of usage.

**[01:40:46] - [01:40:55]**

Dileep Karri: Okay? It depends on your ease of usage. Now, you can say, ChatGPT.

**[01:40:56] - [01:41:00]**

Dileep Karri: Claude... Grove bot.

**[01:41:04] - [01:41:09]**

Dileep Karri: The other way to put it is... Americano?

**[01:41:11] - [01:41:13]**

Dileep Karri: Capucino?

**[01:41:16] - [01:41:17]**

Dileep Karri: Ladick.

**[01:41:20] - [01:41:21]**

Dileep Karri: Okay?

**[01:41:22] - [01:41:27]**

Dileep Karri: Now, how many of you think Americano is better than Capuchin?

**[01:41:28] - [01:41:29]**

Dileep Karri: Thumbs up.

**[01:41:29] - [01:41:33]**

Dileep Karri: An Americano coffee is better than Capucino coffee.

**[01:41:34] - [01:41:39]**

Dileep Karri: Now, let me know how many of you think Capuccino coffee is better than American.

**[01:41:40] - [01:41:43]**

Dileep Karri: Okay? It is all personal taste.

**[01:41:43] - [01:41:49]**

Dileep Karri: You like cappuccino, you like Americano, you like latte.

**[01:41:49] - [01:41:53]**

Dileep Karri: Now, you have to taste this and figure out

**[01:41:53] - [01:41:56]**

Dileep Karri: Right? How you can work with it.

**[01:41:57] - [01:42:02]**

Dileep Karri: Right? And the way I would advise you to think about this.

**[01:42:02] - [01:42:05]**

Dileep Karri: When you have your first coffee of the day.

**[01:42:05] - [01:42:13]**

Dileep Karri: When do you feel energized and you feel you can start the day then? Is it an Americano, is it a cappuccino, or is it a Latin?

**[01:42:14] - [01:42:26]**

Dileep Karri: Now, for, like, if I reframe the question, my question I will pose is not what is the best harness, what is the best setup of AI that I can use?

**[01:42:27] - [01:42:30]**

Dileep Karri: So that I am able to do my book.

**[01:42:31] - [01:42:35]**

Dileep Karri: Do you understand? Are you able to understand this reframing?

**[01:42:35] - [01:42:43]**

Dileep Karri: Remember, day one I said sun rises in the east, okay? Now we are into the Kopernicus laws of Pieter motion.

**[01:42:44] - [01:42:51]**

Dileep Karri: where we have moved away from which is good Cloud, which is good chat GPT, which is good Grok bot.

**[01:42:51] - [01:43:04]**

Dileep Karri: by now telling everybody is equivalent, it depends on which one you are comfortable with. Is your job getting done or not? So, you move from tool-driven

**[01:43:07] - [01:43:09]**

Dileep Karri: Too framework-driven.

**[01:43:13] - [01:43:19]**

Dileep Karri: You will not ask ChatGPT, Claude, or Grok is better. You will ask a question.

**[01:43:19] - [01:43:28]**

Dileep Karri: which harness is better? Is it within my budget? Am I able to use it well? Am I able to apply my principles?

**[01:43:28] - [01:43:47]**

Dileep Karri: If ChatGPT works for you, so be it. Don't have to worry about the Twitter, the YouTube, everywhere, where people will keep telling, you know, Anthropic killed ChatGPT, ChatGPT killed Anthropic, Grok killed Anthropic, etc. Everybody keeps killing each other.

**[01:43:47] - [01:43:52]**

Dileep Karri: But for you, You can think about whether it works for you or not.

**[01:43:52] - [01:43:53]**

Dileep Karri: As simple as that.

**[01:43:54] - [01:43:59]**

Dileep Karri: Everybody, do you understand this part? Because this framing is very, very different.

**[01:43:59] - [01:44:08]**

Dileep Karri: Okay? Till yesterday, you have learned the various principles. Today, I want you to not just take the principles, but level up.

**[01:44:10] - [01:44:17]**

Dileep Karri: Okay? Because this is where, when I come back later for some other sessions, I will...

**[01:44:17] - [01:44:21]**

Dileep Karri: further revise this, and I'll keep this forward variable.

**[01:44:23] - [01:44:34]**

Dileep Karri: Don't think about ChatGPT. Think about, do I have the right skills? Can I make my skills? Do I have the right tools? How do I connect the tools? Etc.

**[01:44:35] - [01:44:47]**

Dileep Karri: Do you know, know how to connect your tools to AI? You just have to find the right documentation, copy the URL, dump it, and say, install it, figure it out.

**[01:44:48] - [01:44:50]**

Dileep Karri: That's all. That's the thing you need to do.

**[01:44:50] - [01:44:55]**

Dileep Karri: You don't even have to install it yourself, you just have to point AI to the URL.

**[01:44:56] - [01:45:03]**

Dileep Karri: Okay? The AJ... the AI models have become so good, we just have to point it to the right resources.

**[01:45:05] - [01:45:08]**

Dileep Karri: Everybody following? Understood?

**[01:45:09] - [01:45:11]**

Dileep Karri: All clear, so far?

**[01:45:20] - [01:45:23]**

Dileep Karri: All right, so the next part of

**[01:45:23] - [01:45:32]**

Dileep Karri: the thing, we will go a little more detail into Grokbot, and then switch into how you can activate local models on your ChatGPT.

**[01:45:33] - [01:45:35]**

Dileep Karri: Okay, let's get started.

**[01:45:36] - [01:45:41]**

Dileep Karri: So... Come back to Grokbots, let us see what jobs it has built.

**[01:45:44] - [01:45:55]**

Dileep Karri: There you go. Executive Director, CA AI and Booth AI Transformation. Director of Applied AI for Academic Initiatives. This looks like a decent job.

**[01:45:55] - [01:45:59]**

Dileep Karri: Director, AI Learning Enablement, decent.

**[01:45:59] - [01:46:03]**

Dileep Karri: Director, AI Institute, Augusta University. Good.

**[01:46:04] - [01:46:13]**

Dileep Karri: then Director, AI Center of Excellence, Head of AI Transformation. This, I might not be a right fit. I would say 50-50.

**[01:46:15] - [01:46:27]**

Dileep Karri: Okay? I would say 50-50 overall, in the sense that I'm having 50% of job postings, which are following what I could do, 50% of job postings.

**[01:46:28] - [01:46:37]**

Dileep Karri: you know, that is there, okay? Now, I will say, I'll give it feedback, Keep it focused.

**[01:46:38] - [01:46:47]**

Dileep Karri: Only on the main... angle, Don't give... Penny Ferrell.

**[01:46:49] - [01:46:52]**

Dileep Karri: Sir, I may not be...

**[01:46:55] - [01:46:56]**

Dileep Karri: Short history.

**[01:46:58] - [01:47:03]**

Dileep Karri: Maybe give me... Job Figment.

**[01:47:04] - [01:47:09]**

Dileep Karri: score... Sledak?

**[01:47:09] - [01:47:10]**

Dileep Karri: Okay, good.

**[01:47:10] - [01:47:11]**

Dileep Karri: You'll say, third.

**[01:47:15] - [01:47:16]**

Dileep Karri: So...

**[01:47:16] - [01:47:30]**

Dileep Karri: I am saying, you know, give it peripheral, I may not be shortlisted, give me job fitment score, etc. Now you can ask your bot, you know, okay, prepare a resume for me, right? Apply for me, then it will check

**[01:47:31] - [01:47:32]**

Dileep Karri: In terms of the harness.

**[01:47:33] - [01:47:35]**

Dileep Karri: What can it do? Whether it can

**[01:47:39] - [01:47:44]**

Dileep Karri: Whether it can apply on my behalf, what are the things it can apply on your behalf?

**[01:47:44] - [01:47:53]**

Dileep Karri: Converting it to schedule, very straightforward. You say run it every week, every two weeks, every three weeks, etc. It can run as per schedule.

**[01:47:54] - [01:48:01]**

Dileep Karri: Okay? Can you also... Apply to these jobs.

**[01:48:03] - [01:48:09]**

Dileep Karri: with a... customized... Where Zoom A.

**[01:48:09] - [01:48:11]**

Dileep Karri: to Pradeep.

**[01:48:13] - [01:48:19]**

Dileep Karri: So here, whenever you have questions, can it do this, can it do that? Ask the Grok bot itself.

**[01:48:19] - [01:48:25]**

Dileep Karri: It will tell you whether it is able to do that or not. I can build a customized resume for each profile.

**[01:48:25] - [01:48:30]**

Dileep Karri: Applying is a bit different. I can open the application pages.

**[01:48:31] - [01:48:40]**

Dileep Karri: But each submit usually needs your company login plus details. I won't hit submit without you saying so for that job.

**[01:48:42] - [01:48:47]**

Dileep Karri: Okay, so it'll say... I will say, resume plus apply for the top one.

**[01:48:53] - [01:48:59]**

Dileep Karri: Are you able to understand this? You want extra features? Ask it. It will build those extra features for you.

**[01:49:09] - [01:49:17]**

Dileep Karri: Okay, so now it is saying Director AI Learning Enablement at Capital One. It will draft a tailored resume for that role.

**[01:49:20] - [01:49:26]**

Dileep Karri: Now, here, I can give it another bot to make. It can make that particular bot.

**[01:49:27] - [01:49:31]**

Dileep Karri: For example, let us say I want to build an analogy port.

**[01:49:47] - [01:49:50]**

Dileep Karri: Just an analogy.

**[01:49:51] - [01:49:58]**

Dileep Karri: that will fit And help explain... the concept.

**[01:50:02] - [01:50:03]**

Dileep Karri: audience.

**[01:50:07] - [01:50:24]**

Dileep Karri: Okay? And it doesn't matter. You can use Eggbot also to build, you can use Normal also to build, it doesn't matter. Both are decent enough. But for new people who are trying to build their very first bots, I think Dr. Eggbot will be a better way to get started.

**[01:50:31] - [01:50:33]**

Dileep Karri: Okay, Analogy Bot is live.

**[01:50:35] - [01:50:40]**

Dileep Karri: Okay, which one to turn into an analogy first? Let us take harness.

**[01:50:41] - [01:50:44]**

Dileep Karri: harness for... AI?

**[01:50:45] - [01:50:49]**

Dileep Karri: I want to turn this into an analogy, let us see how it is able to build it out.

**[01:51:00] - [01:51:00]**

Dileep Karri: Okay?

**[01:51:01] - [01:51:02]**

Dileep Karri: So...

**[01:51:07] - [01:51:09]**

Dileep Karri: It has built my resume.

**[01:51:09] - [01:51:14]**

Dileep Karri: We can look at this. Kavi, Professional Summary, core competencies.

**[01:51:14] - [01:51:19]**

Dileep Karri: Professional education, all my entire profile, it has built it out.

**[01:51:20] - [01:51:21]**

Dileep Karri: Okay?

**[01:51:21] - [01:51:26]**

Dileep Karri: then if I want to make any changes, I can do this. How should we handle one?

**[01:51:26] - [01:51:30]**

Dileep Karri: I have U.S. workout, etc.

**[01:51:30] - [01:51:34]**

Dileep Karri: I don't have... U.S. world thought.

**[01:51:48] - [01:51:51]**

Dileep Karri: So, I can rerun it, and I can find anything, okay?

**[01:51:57] - [01:52:00]**

Dileep Karri: Okay? Make it better.

**[01:52:00] - [01:52:05]**

Dileep Karri: this... It looks... very surface.

**[01:52:20] - [01:52:29]**

Dileep Karri: Okay, so it is kind of making it better and trying to use it, etc, and all that. By the way, here, if you see, the Grok bot.

**[01:52:30] - [01:52:40]**

Dileep Karri: that is available. This is the screen that is there for a particular bot, so every bot has the computer screen, etc, that you can use.

**[01:52:41] - [01:52:53]**

Dileep Karri: Okay? Plus, the other way to kind of work here, very interesting, is I can create a chat of bots. For example, I can add social research analogy.

**[01:52:54] - [01:52:59]**

Dileep Karri: And I can say... do research.

**[01:53:00] - [01:53:05]**

Dileep Karri: Let us take a topic. Ernest... Engineering.

**[01:53:07] - [01:53:19]**

Dileep Karri: Or do research on... AI... Ernest and provide analogies... You understand.

**[01:53:20] - [01:53:26]**

Dileep Karri: So, I say, do research on AI hardness and provide analogies to understand.

**[01:53:31] - [01:53:32]**

Dileep Karri: So here, what happens?

**[01:53:33] - [01:53:37]**

Dileep Karri: My social research bot and my analogy bot will talk to each other.

**[01:53:38] - [01:53:43]**

Dileep Karri: So it is like bots talking to each other to kind of do a particular task.

**[01:53:43] - [01:54:00]**

Dileep Karri: Okay? Quick take from the research, an AI harness is a software wrapped around an LLM so that it can, you, you know, act like an agent. The agent equal to model plus harness. Analogy that model versus harness split is a bit worth

**[01:54:00] - [01:54:04]**

Dileep Karri: Analogizing for a non-technical audience.

**[01:54:05] - [01:54:17]**

Dileep Karri: Okay? So then, social research has told something, analogy has replied. Did you understand this? I can create a group chat of crockpots.

**[01:54:18] - [01:54:27]**

Dileep Karri: whatever agents that I have built, I can create a group chat where I can give them a task, they will discuss among each other, and do the task for them.

**[01:54:32] - [01:54:40]**

Dileep Karri: I would say two, better research... And give me... Stronger analogy.

**[01:54:41] - [01:54:47]**

Dileep Karri: I'm not satisfied. I said, do better research, and give me a stronger analogy.

**[01:54:48] - [01:55:01]**

Dileep Karri: Now, in Cloud or Codex, the conversation between bots happens, but you don't control it, whereas in Grokbot, you can control it. You can open a new chat and have the agents talk to each other.

**[01:55:06] - [01:55:16]**

Dileep Karri: Okay? Agent equal to model plus harness is literal. The model only reasons. The harness runs the reason at observed loop.

**[01:55:17] - [01:55:22]**

Dileep Karri: Okay? Analogy, try again with that, especially same brain, different workspace inputs.

**[01:55:22] - [01:55:40]**

Dileep Karri: Same person, two jobs. In job A, they sit in an empty room with a notepad, they can think and talk brilliantly. In job B, the same brain gets a test, a phone, a shared drive, a checklist for done, and a manager who signs off before.

**[01:55:41] - [01:55:45]**

Dileep Karri: everything leaves, okay? That is what it means. The model is the brain.

**[01:55:45] - [01:55:57]**

Dileep Karri: the harness is the workplace, tools, memory, rules, etc, all that. So, here it has given me a better analogy, where in one place, they are sitting in an empty room with a notepad.

**[01:55:57] - [01:56:11]**

Dileep Karri: They can think and talk, but they cannot do anything. In other case, you have a phone, you can talk to people, you can have a shared drive, you have a checklist for done, which will be a much better harness overall.

**[01:56:11] - [01:56:16]**

Dileep Karri: Okay? So how do I combine the agents when I... go here.

**[01:56:17] - [01:56:24]**

Dileep Karri: I can create a new group chat, add the agents I want in the group chat, and they become part of my group chat.

**[01:56:27] - [01:56:28]**

Dileep Karri: Okay? Everybody clear?

**[01:56:33] - [01:56:40]**

Dileep Karri: How you can create bots that work for you, how you can create a group chat out of the bots.

**[01:56:40] - [01:56:47]**

Dileep Karri: Now, the last concept before we move on to the next part, and we'll recap Grokbot once again.

**[01:56:48] - [01:56:50]**

Dileep Karri: What is the recommended way?

**[01:56:57] - [01:57:01]**

Dileep Karri: to use... God wanted.

**[01:57:04] - [01:57:13]**

Dileep Karri: So, the recommended way, this is given by the SpaceX team, which built and designed these Grok bots, etc.

**[01:57:14] - [01:57:22]**

Dileep Karri: So, what they're saying, it is, run the bots, like, employees.

**[01:57:25] - [01:57:28]**

Dileep Karri: And, set up managers.

**[01:57:32] - [01:57:39]**

Dileep Karri: Okay? So, what I can do right now is I'll set up managers for these bots.

**[01:57:40] - [01:57:43]**

Dileep Karri: So, what I'll do is, I'll go to the Grok bot.

**[01:57:45] - [01:57:57]**

Dileep Karri: I'll go to Dr. Eggbot, and I'll say, I want to set up Managers for my... Girl, what's...

**[01:57:59] - [01:58:06]**

Dileep Karri: One manager for... research... less analogy.

**[01:58:07] - [01:58:14]**

Dileep Karri: another... Manager... for... Job search.

**[01:58:19] - [01:58:24]**

Dileep Karri: And... and overall... Chief of Staff.

**[01:58:26] - [01:58:29]**

Dileep Karri: to manage the... Managers.

**[01:58:31] - [01:58:46]**

Dileep Karri: Okay? So, I am saying I want to set up managers for my Grok bot, where one manager for research, the other one for this, research plus analogy manager, job search manager, and a chief of staff above both.

**[01:58:47] - [01:58:52]**

Dileep Karri: Okay? So now it is checking which one it already has.

**[01:58:52] - [01:58:55]**

Dileep Karri: Okay, how should the job search manager get its report is?

**[01:59:00] - [01:59:05]**

Dileep Karri: there is a... new bot.

**[01:59:06] - [01:59:11]**

Dileep Karri: which already... Does the job search.

**[01:59:13] - [01:59:14]**

Dileep Karri: reuse it.

**[01:59:15] - [01:59:18]**

Dileep Karri: And make it job search.

**[01:59:20] - [01:59:22]**

Dileep Karri: Employee.

**[01:59:24] - [01:59:27]**

Dileep Karri: And have a manager on top.

**[01:59:38] - [01:59:52]**

Dileep Karri: Okay, so what the SpaceX team recommends is, set it up like this thing so that you can have multiple worker AI employees which get invoked by your chief of staff as and when the need arises.

**[01:59:56] - [01:59:58]**

Dileep Karri: Okay, you have got the Job Scout.

**[01:59:58] - [02:00:06]**

Dileep Karri: and the job lead, and your chief of staff. So you have got your research lead, your job lead, and your chief of staff.

**[02:00:10] - [02:00:13]**

Dileep Karri: Now, I will say, Chief of Staff.

**[02:00:13] - [02:00:15]**

Dileep Karri: what I want to do.

**[02:00:16] - [02:00:19]**

Dileep Karri: I will tell my Chief of staff, I want to...

**[02:00:22] - [02:00:32]**

Dileep Karri: research on GPT-6 Astra Use cases... And in parallel.

**[02:00:35] - [02:00:43]**

Dileep Karri: look for... Jobs... in India, that suit me.

**[02:00:47] - [02:00:54]**

Dileep Karri: Okay? So I say I want to research on GPT-6 Astra use cases, and in parallel, look for jobs that suit me.

**[02:00:55] - [02:00:59]**

Dileep Karri: So now... Look at this. I'm talking to my chief of staff.

**[02:01:01] - [02:01:07]**

Dileep Karri: Okay, it has messaged two bots. It has messaged the research lead, as well as the job lead.

**[02:01:12] - [02:01:30]**

Dileep Karri: Okay, so research lead is on the GPT-6 Astra use cases. Job lead is running an India search framed around JAI education leadership until we have a tighter fit from you. I will verge their replies into one status brief over here.

**[02:01:32] - [02:01:35]**

Dileep Karri: Okay, so I'm building the master agent.

**[02:01:35] - [02:01:38]**

Dileep Karri: Agent leads, agent employees.

**[02:01:42] - [02:01:58]**

Dileep Karri: Okay? And the token usage, etc, if you are looking at it, so you can check on settings. You can check here the weekly usage, okay? So right now, 4% has been used, whatever we have done, but as we run more and more, more of the percentage will be used.

**[02:01:58] - [02:02:04]**

Dileep Karri: Job lead should be, you know, India, remote?

**[02:02:04] - [02:02:07]**

Dileep Karri: I will say India remote only for now.

**[02:02:10] - [02:02:12]**

Dileep Karri: I'll give you the three options.

**[02:02:19] - [02:02:27]**

Dileep Karri: Okay, so, research on this thing is running, AJITH FINE Submit.

**[02:02:31] - [02:02:45]**

Dileep Karri: So, the way it should work is, you should define teams like organizations, right? Suppose you are building marketing bots. They should have a CMO on top of that. You are building operational bots.

**[02:02:45] - [02:02:49]**

Dileep Karri: They should have a COO on top of that. You are building

**[02:02:49] - [02:02:56]**

Dileep Karri: like, writing pods. They should have a content lead on top of that. All of them report to your chief of staff.

**[02:02:57] - [02:03:12]**

Dileep Karri: So, all I do is I keep talking to my chief of staff, and, you know, I can keep working on this. So, let me say Amitus back, drafted, so it'll try to draft me a resume for something, and I can keep working on this.

**[02:03:13] - [02:03:26]**

Dileep Karri: So, here, if you see, it is talking to my job lead, it is talking to my research lead, and they are talking to each other and doing the job. I am not directly talking to my employees.

**[02:03:26] - [02:03:42]**

Dileep Karri: I have a chief of staff, chief of staff talks to others. So, the Grok bot original team, the SpaceX team which built it, they use Grok bot in this manner, where they build an organization of bots, and then they will do it.

**[02:03:42] - [02:03:47]**

Dileep Karri: Now, it is all about strengthening the bots, okay?

**[02:03:47] - [02:03:58]**

Dileep Karri: So, for example, I would say, go to Dr. Egbott, and I say, I want to... strengthen... the research...

**[02:03:58] - [02:04:04]**

Dileep Karri: Lead, bought, with some... Skills.

**[02:04:06] - [02:04:20]**

Dileep Karri: Let us say, you know, you want to build, strengthen the research lead bot with some skills. So, it will do the research, it will write the skills, you can copy-paste some skills which you have, read, write, and you can give it.

**[02:04:24] - [02:04:29]**

Dileep Karri: Okay? Which skills would strengthen everything overall?

**[02:04:29] - [02:04:31]**

Dileep Karri: I would say, what do you suggest?

**[02:04:43] - [02:04:46]**

Dileep Karri: Okay? So... Do your pick.

**[02:04:48] - [02:04:54]**

Dileep Karri: And it will, you know, set up the pick, and it will add those skills.

**[02:04:57] - [02:05:09]**

Dileep Karri: So it is building the research dispatch skill, the research synthesis skill, and then it will update the research lead so that it can use those skills. Then, if you want to add some more things.

**[02:05:09] - [02:05:11]**

Dileep Karri: on the marketplace.

**[02:05:11] - [02:05:31]**

Dileep Karri: you keep adding multiple things. Suppose you want to do data analysis. You can connect your amplitude, you can connect your AWS data analytics, or whatever tools that you typically use. When you connect all of those, from there, the data is pulled by the Grok bot, and that research or analysis can be done.

**[02:05:32] - [02:05:39]**

Dileep Karri: Okay? Now, don't think about, okay, how do I design this organization, etc. Start slow.

**[02:05:39] - [02:05:43]**

Dileep Karri: First, think about 2-3 employees that can work with you.

**[02:05:43] - [02:05:47]**

Dileep Karri: Take those 2-3 employees together, and then...

**[02:05:47] - [02:05:53]**

Dileep Karri: Start working, build, you know, nurture, and try to build skills for them.

**[02:05:54] - [02:05:59]**

Dileep Karri: once they build the skills, right, then you can build the top, right? So go bottom.

**[02:05:59] - [02:06:12]**

Dileep Karri: See, SpaceX, the people, while they recommend, right, they are very experienced in using AI. That's why they said, build 10 bots with 2 managers, with a chief of staff, etc.

**[02:06:12] - [02:06:23]**

Dileep Karri: My suggestion is follow the process where you build individual bots. So my process I'll recommend is, first, on the marketplace, install the Dr. Eggbot.

**[02:06:23] - [02:06:31]**

Dileep Karri: Use the Dr. Eggbot to set up your basic bot, which can build other bots.

**[02:06:31] - [02:06:44]**

Dileep Karri: Then, in the marketplace, look at the apps available, see which ones can be connected, and connect those. You want something to work on Gmail? Connect your Gmail. Calendar, connect your calendar.

**[02:06:44] - [02:06:51]**

Dileep Karri: Right? Whichever ones are available, connect all of those so that you can work with them easily.

**[02:06:53] - [02:07:01]**

Dileep Karri: Right? So, that is how I would, you know, kind of set up this entire thing, and you know.

**[02:07:01] - [02:07:04]**

Dileep Karri: How you can work on this.

**[02:07:05] - [02:07:11]**

Dileep Karri: Right? So, quick summary of what all we have done with Grok Bond so far.

**[02:07:11] - [02:07:14]**

Dileep Karri: with Grokbot, what we did is...

**[02:07:14] - [02:07:19]**

Dileep Karri: we try to build an organization of AI employees.

**[02:07:19] - [02:07:22]**

Dileep Karri: Okay? With a chief of staff.

**[02:07:22] - [02:07:27]**

Dileep Karri: a job lead, as well as a research lead. So here, my job lead, if you see.

**[02:07:27] - [02:07:30]**

Dileep Karri: It built my resume.

**[02:07:31] - [02:07:33]**

Dileep Karri: For that particular job role.

**[02:07:33] - [02:07:36]**

Dileep Karri: It will take cover letter also.

**[02:07:36] - [02:07:43]**

Dileep Karri: for that particular job role, it is saying Vice President, Learning Delivery Overall, what all I have done.

**[02:07:45] - [02:08:01]**

Dileep Karri: Okay? And then it is up to me to make my edits and do this. So then it is saying to Chief of Staff, it is done. And if you look at the Chief of Staff, Chief of Staff talked to that, job lead and got me the resume, the docs, the cover letter, as well as the GD.

**[02:08:01] - [02:08:08]**

Dileep Karri: Now, should I revise the pack? Should I add the contact details, etc? We should do.

**[02:08:08] - [02:08:26]**

Dileep Karri: I'm not going to get into how to apply, that part, I will leave it up to you, but application part, it can open the website, it can fill up the details, but the actual clicking of the application, the authentication, you will have to do. Do not try to 100% automate the process.

**[02:08:27] - [02:08:38]**

Dileep Karri: At least the last 10% try to do it yourself so that you are doing a complete review, and whatever you're sending is something that you are sending with your name on top of it.

**[02:08:39] - [02:08:41]**

Dileep Karri: Clear, everybody, so far?

**[02:08:43] - [02:08:44]**

Dileep Karri: Are we good?

**[02:08:48] - [02:08:51]**

Dileep Karri: Okay? For whatever you have seen, you have understood.

**[02:08:53] - [02:08:54]**

Dileep Karri: Okay?

**[02:08:55] - [02:09:00]**

Dileep Karri: So, till now, right, I have shown you the part of

**[02:09:00] - [02:09:05]**

Dileep Karri: how I can use a invisible harness with GrogBot.

**[02:09:05] - [02:09:07]**

Dileep Karri: Now, let us flip the story.

**[02:09:08] - [02:09:10]**

Dileep Karri: How can I change my pilot?

**[02:09:11] - [02:09:15]**

Dileep Karri: inside my ChatGPT, right, if I open my ChatGPT,

**[02:09:19] - [02:09:22]**

Dileep Karri: Okay, if I open my ChatGPT, you see here.

**[02:09:23] - [02:09:33]**

Dileep Karri: I have this GPT, Astra, Terra, Luna, etc. But you also see these other models which are Athian.

**[02:09:33] - [02:09:39]**

Dileep Karri: How can I make these models appear? How do I use this? Is what I'm going to show you.

**[02:09:39] - [02:09:44]**

Dileep Karri: Okay? For now, I'm going to shut down ChatGPT.

**[02:09:45] - [02:09:48]**

Dileep Karri: I will quit chat GPT completely.

**[02:09:49] - [02:10:00]**

Dileep Karri: Okay? And then, I will show you how to connect this. Okay? Now, this connection might be appearing only maybe on the Plus models, that is a little drawback.

**[02:10:01] - [02:10:06]**

Dileep Karri: But... You can add a lot of local models over here.

**[02:10:07] - [02:10:13]**

Dileep Karri: First, let me walk through the process, then I will explain you a little bit things.

**[02:10:13] - [02:10:15]**

Dileep Karri: Okay? Number one.

**[02:10:18] - [02:10:23]**

Dileep Karri: The application you will require is something called olama.com.

**[02:10:23] - [02:10:27]**

Dileep Karri: Okay? If you want to install your

**[02:10:27] - [02:10:36]**

Dileep Karri: any kind of local models, to use the local models, you will have to download something called OLAMA.

**[02:10:36] - [02:10:40]**

Dileep Karri: Okay? Inside OLAMA, there are two types of models.

**[02:10:40] - [02:10:43]**

Dileep Karri: Okay? So, in Olama.

**[02:10:47] - [02:10:50]**

Dileep Karri: you have... cloud models.

**[02:10:53] - [02:10:56]**

Dileep Karri: And you have local models.

**[02:11:00] - [02:11:08]**

Dileep Karri: local models, Installed... Local on your system.

**[02:11:10] - [02:11:11]**

Dileep Karri: cloud models.

**[02:11:13] - [02:11:18]**

Dileep Karri: I would say, these are the models which are running from

**[02:11:23] - [02:11:24]**

Dileep Karri: All our muscles.

**[02:11:27] - [02:11:34]**

Dileep Karri: Okay? What Olama promises is all the cloud models are privacy by default.

**[02:11:40] - [02:11:46]**

Dileep Karri: That means they do not store any conversation on their... on their servers.

**[02:11:46] - [02:11:56]**

Dileep Karri: they only... take the conversation, return the output, that's it. They don't store anything. They are privacy-first by default.

**[02:11:57] - [02:12:01]**

Dileep Karri: Okay? So first, install the Olama desktop app.

**[02:12:02] - [02:12:06]**

Dileep Karri: Okay? So the Olama desktop app looks like this.

**[02:12:07] - [02:12:13]**

Dileep Karri: This is the Olama desktop app, and when you install the app, it will look like this.

**[02:12:18] - [02:12:20]**

Dileep Karri: Okay? Everybody clear?

**[02:12:22] - [02:12:23]**

Dileep Karri: Are we good?

**[02:12:23] - [02:12:27]**

Dileep Karri: Go to olama.com, install the desktop.

**[02:12:30] - [02:12:38]**

Dileep Karri: Okay? That is a step run. It is going to be very slow when you run it, right? But...

**[02:12:38] - [02:12:40]**

Dileep Karri: Hey, this will be helpful.

**[02:12:40] - [02:12:47]**

Dileep Karri: Okay? So, for example, suppose I want to install this 12 billion parameter model.

**[02:12:48] - [02:12:57]**

Dileep Karri: Okay? Or the 7 billion parameter model. So here, if you see, the 7 billion parameter model is already something that I have installed.

**[02:12:57] - [02:13:02]**

Dileep Karri: Now, how do I search for this model, switch to install? So, I go to...

**[02:13:04] - [02:13:07]**

Dileep Karri: Olama, I go to the Models.

**[02:13:09] - [02:13:14]**

Dileep Karri: Okay? Then, in the models, right, search for...

**[02:13:17] - [02:13:18]**

Dileep Karri: Huh?

**[02:13:18] - [02:13:21]**

Dileep Karri: Models, and how you should choose your models is...

**[02:13:21] - [02:13:33]**

Dileep Karri: If your RAM is XGB, try to search for models which are X by 2 GB at max. That means if I have got a 16GB RAM,

**[02:13:33] - [02:13:39]**

Dileep Karri: try to search for 8GB or 8B parameter models. So, I'll search for 8B,

**[02:13:44] - [02:13:56]**

Dileep Karri: Okay? And I will get a lot of these models, which are AB. The best models to kind of search for would be the Gamma series of models. So, search for Gamma.

**[02:13:56] - [02:13:59]**

Dileep Karri: And in Gamma, you can see here.

**[02:14:01] - [02:14:06]**

Dileep Karri: different models, like 4B, 12B, 26B, 31B.

**[02:14:06] - [02:14:07]**

Dileep Karri: each B means?

**[02:14:08] - [02:14:23]**

Dileep Karri: those many billion parameter models, okay? So if it is 4B, that is a 4 billion parameter model, 12B, 12 billion parameter model, 26B, 26 billion parameter model, etc.

**[02:14:24] - [02:14:32]**

Dileep Karri: Okay? So whenever you are trying to choose a model, ensure that You are going for...

**[02:14:33] - [02:14:38]**

Dileep Karri: a model whose size is half the size of your RAM.

**[02:14:40] - [02:14:44]**

Dileep Karri: Okay? I will repeat this process once again, don't worry.

**[02:14:57] - [02:14:59]**

Dileep Karri: First, go to Olama.

**[02:15:01] - [02:15:03]**

Dileep Karri: First, go to olama.com.

**[02:15:03] - [02:15:08]**

Dileep Karri: install the full Olama desktop application.

**[02:15:08] - [02:15:14]**

Dileep Karri: Okay? And then, to install a particular model, search for GEMA,

**[02:15:14] - [02:15:21]**

Dileep Karri: And let us say I want to install the 12 billion parameter model of KMA.

**[02:15:21] - [02:15:27]**

Dileep Karri: So, I go here... And here, look at this.

**[02:15:27] - [02:15:30]**

Dileep Karri: KMA for 12 billion.

**[02:15:30] - [02:15:31]**

Dileep Karri: Copy this.

**[02:15:32] - [02:15:41]**

Dileep Karri: Okay, copy this part, the gamma 4 12 billion parameter, and look at the size. It is 7.6 GB.

**[02:15:41] - [02:15:53]**

Dileep Karri: I am okay to install this, because I have a 16GB RAM. If you have got an 8GB RAM, do not install 7.6GB. You will have to search for something which is even smaller.

**[02:15:54] - [02:16:00]**

Dileep Karri: Okay? So, you'll have to keep searching for smaller models. So, you can search for gamma.

**[02:16:03] - [02:16:04]**

Dileep Karri: You can go for Gamma2.

**[02:16:06] - [02:16:13]**

Dileep Karri: In Gamma 2, there is a 2 billion parameter model. If you have got 8GB RAM, you can search for 1.6GB port.

**[02:16:14] - [02:16:21]**

Dileep Karri: If your model that you are installing exceeds the size of your RAM,

**[02:16:21] - [02:16:30]**

Dileep Karri: there is a great chance your system will crash, run very slow. When it is running, you will not be able to use your system at all.

**[02:16:32] - [02:16:44]**

Dileep Karri: Okay? So, that is why I would recommend you to pick up local models which are smaller, or at least half the size of your RAM. Is it clear, everyone?

**[02:16:44] - [02:16:46]**

Dileep Karri: Is this part clear?

**[02:16:51] - [02:16:52]**

Dileep Karri: Okay?

**[02:16:52] - [02:16:53]**

Dileep Karri: Now...

**[02:16:54] - [02:17:04]**

Dileep Karri: Here, how do I install this particular model? I will copy the name of the model. So, for example, in the previous one, I go to Gamma3,

**[02:17:05] - [02:17:10]**

Dileep Karri: I copy the name of this model, open OLAMA.

**[02:17:11] - [02:17:15]**

Dileep Karri: Open this, and paste the name of the model over there.

**[02:17:16] - [02:17:20]**

Dileep Karri: Okay? Paste the name of the model, and then click on it.

**[02:17:21] - [02:17:22]**

Dileep Karri: Okay?

**[02:17:22] - [02:17:29]**

Dileep Karri: the model is selected, not downloaded yet. Okay? Once again, the process from the beginning.

**[02:17:30] - [02:17:35]**

Dileep Karri: Go to the Olama website, Search for a given model.

**[02:17:36] - [02:17:38]**

Dileep Karri: I'm searching for Kemma.

**[02:17:38] - [02:17:42]**

Dileep Karri: There are multiple models. Open the model that you want.

**[02:17:43] - [02:17:54]**

Dileep Karri: In that, search for the different parameter models which are available, and copy whichever the model size you are comfortable to work with.

**[02:17:54] - [02:18:00]**

Dileep Karri: Okay? So, for example, I want to work with KMathRI latest. I will copy this.

**[02:18:01] - [02:18:07]**

Dileep Karri: Go to Olama, I will... Copy that.

**[02:18:07] - [02:18:09]**

Dileep Karri: I will select it.

**[02:18:09] - [02:18:13]**

Dileep Karri: Okay? Here, I just had to say, Hi.

**[02:18:15] - [02:18:21]**

Dileep Karri: And then, it will start... Downloading that model for my usage.

**[02:18:21] - [02:18:30]**

Dileep Karri: Okay, because this model is already available, it is coming, right? Otherwise, it will get downloaded. For example.

**[02:18:33] - [02:18:39]**

Dileep Karri: I can say is the... Model, locally.

**[02:18:39] - [02:18:40]**

Dileep Karri: Downloaded.

**[02:18:42] - [02:18:43]**

Dileep Karri: If it is...

**[02:18:48] - [02:18:50]**

Dileep Karri: Okay, download it locally.

**[02:18:52] - [02:18:56]**

Dileep Karri: Sometimes it gives problem. Okay, let me... Try once again.

**[02:18:56] - [02:19:00]**

Dileep Karri: go to... Gematri?

**[02:19:01] - [02:19:05]**

Dileep Karri: I will use this model, which is the 1 billion parameters.

**[02:19:06] - [02:19:08]**

Dileep Karri: Go here, start a new chat.

**[02:19:12] - [02:19:14]**

Dileep Karri: Selected.

**[02:19:14] - [02:19:16]**

Dileep Karri: And I'll say hi.

**[02:19:18] - [02:19:20]**

Dileep Karri: Now, it will download that model.

**[02:19:22] - [02:19:34]**

Dileep Karri: Okay, so you have to search for the model on olama.com, copy the exact name, and search for it, and it will download and install on your system.

**[02:19:38] - [02:19:49]**

Dileep Karri: Okay, for people who did not get it, don't worry, I have explained it twice. When you check the recording, you will understand how do you exactly search and download one last time for everyone.

**[02:19:51] - [02:19:54]**

Dileep Karri: You go to... here.

**[02:19:55] - [02:19:57]**

Dileep Karri: Go to Models, olama.com.

**[02:19:59] - [02:20:10]**

Dileep Karri: Okay? And then you try to search for whichever model you want. For example, I'm searching for Gamma. Let us this time search for a different model. I'll search for a Qwen model.

**[02:20:10] - [02:20:15]**

Dileep Karri: So, I have different Quinn models available. I have Quinn 3.5,

**[02:20:15] - [02:20:18]**

Dileep Karri: I select the Quint 3.5 model.

**[02:20:19] - [02:20:38]**

Dileep Karri: And for people who are asking, if I got a 32GB RAM, which one to select? 32GB means you can select something around 16GB. Do a little research, you will find models around 16GB. I think a Quinn 3.5 27 billion parameter model would be, like, very well sufficient.

**[02:20:38] - [02:20:45]**

Dileep Karri: Okay? So, for now, don't break your head on which models to choose. Choose either Quinn.

**[02:20:45] - [02:21:02]**

Dileep Karri: or GEMA Models. These are good local models you can use without worry. GEMA is by Google. Quinn is, I think, from the Alibaba family. These are good models which you can select locally.

**[02:21:03] - [02:21:09]**

Dileep Karri: Okay? If you're looking at local coding models, there is a Quen coder, so if you search for Quen.

**[02:21:11] - [02:21:22]**

Dileep Karri: there is some Quinn coder models, okay? There's a Quen coder model. You can select the Quinn 2.5 coder or the QAN 3 coder, which are, like, coder points.

**[02:21:22] - [02:21:34]**

Dileep Karri: Okay? Deepseek also is available, but DeepSeek models are slightly bigger. Small models, which we can run on your laptop very well, choose either Gamma or Quid.

**[02:21:34] - [02:21:51]**

Dileep Karri: Okay? I'm not going deeper into what are all the different types of models, etc. I just want you to know which models you can easily download, and which you can set up. Can I have a quick thumbs up if this part is clear, of which models to use?

**[02:21:51] - [02:21:54]**

Dileep Karri: Which, how you can use, etc.

**[02:21:57] - [02:22:04]**

Dileep Karri: Okay, I'm talking about physical RAM of your system. VRAM, again, is hard disk space. Don't go with VRAM.

**[02:22:04] - [02:22:09]**

Dileep Karri: Physical RAM, what is available, take half the size. Rule of thumb.

**[02:22:10] - [02:22:20]**

Dileep Karri: then you're... even with that, it will crash. In fact, I'll tell you, because on my 16GB RAM, I am running a very heavy Zoom session.

**[02:22:20] - [02:22:33]**

Dileep Karri: If I install, or if I run a local model, my system will crash. I can say very confidently, because I have crashed it 3 times in the last 6 accelerator programs.

**[02:22:33] - [02:22:40]**

Dileep Karri: Okay? So that is why, that is the thing. So, I will not show you the local run.

**[02:22:40] - [02:22:43]**

Dileep Karri: I will show you the cloud models, okay?

**[02:22:44] - [02:22:51]**

Dileep Karri: It is happening in my case for a simple reason, because for Zoom, I am sharing my screen.

**[02:22:52] - [02:22:56]**

Dileep Karri: There is a lot of graphics card... graphics processing involved.

**[02:22:56] - [02:23:01]**

Dileep Karri: And therefore, if I use a local model with Zoom, Bound to crash.

**[02:23:03] - [02:23:09]**

Dileep Karri: Okay? So, that's why I... I'm not going with this. So...

**[02:23:10] - [02:23:15]**

Dileep Karri: Olama recently has, you know, kind of come up with something called cloud models.

**[02:23:16] - [02:23:20]**

Dileep Karri: So, what do you mean by cloud models? If you see here, GLM 5.3,

**[02:23:21] - [02:23:29]**

Dileep Karri: one of the biggest models available. So, this model is available hosted by Olama.

**[02:23:30] - [02:23:31]**

Dileep Karri: Which you can count.

**[02:23:33] - [02:23:37]**

Dileep Karri: Okay? GLM 5.3 is the model that you can connect.

**[02:23:39] - [02:23:46]**

Dileep Karri: Okay? So I can use cloud model if I want. So how do I use a cloud model? Again, open the desktop.

**[02:23:47] - [02:23:49]**

Dileep Karri: Okay, start a new chat.

**[02:23:50] - [02:23:51]**

Dileep Karri: Here, open up.

**[02:23:52] - [02:24:00]**

Dileep Karri: There are a lot of cloud models available. I can choose the GLM 5.3 cloud. Now, when I say hi.

**[02:24:02] - [02:24:06]**

Dileep Karri: I am talking to the hosted cloud model of GLL.

**[02:24:06] - [02:24:08]**

Dileep Karri: Not my local models.

**[02:24:10] - [02:24:16]**

Dileep Karri: In fact, if I open, and I open the 1 billion parameter model, And I say, hi?

**[02:24:16] - [02:24:20]**

Dileep Karri: I'm talking to the local model on my laptop.

**[02:24:22] - [02:24:28]**

Dileep Karri: Everybody understood, if I want to delete the model, I can delete it later on. It is easy to delete it.

**[02:24:29] - [02:24:30]**

Dileep Karri: Okay?

**[02:24:32] - [02:24:45]**

Dileep Karri: Right? If I'm using cloud models, it will require a subscription, it will ask you a \$20 subscription, but if you are downloading the local model, there is absolutely no subscription.

**[02:24:45] - [02:24:53]**

Dileep Karri: Okay? Cloud model, hosted by Olama, local model, posted on your local system.

**[02:24:53] - [02:24:54]**

Dileep Karri: Is it clear?

**[02:24:55] - [02:25:04]**

Dileep Karri: Cloud model, hosted by Olama, you require \$20 subscription. Local model, you can install it locally.

**[02:25:07] - [02:25:08]**

Dileep Karri: Okay?

**[02:25:08] - [02:25:18]**

Dileep Karri: And if I want to choose the cloud model, I open Olama, I can choose any of the cloud models. Cloud models are marked with the cloud thing over here.

**[02:25:19] - [02:25:29]**

Dileep Karri: So, I can say GLM 5.3 Cloud, etc. Now, in case I want to choose a different cloud model, I can do that. I'll go to KUMI,

**[02:25:31] - [02:25:34]**

Dileep Karri: I want to use the KUMI K3 model.

**[02:25:35] - [02:25:37]**

Dileep Karri: I'll copy this.

**[02:25:38] - [02:25:44]**

Dileep Karri: Go to Olama, Search for that. I got this. Select.

**[02:25:46] - [02:25:49]**

Dileep Karri: Now, I have loaded the Kiani K3 model.

**[02:25:53] - [02:25:56]**

Dileep Karri: Okay? Now, do you understand?

**[02:25:57] - [02:26:04]**

Dileep Karri: Why Olama? OLAMA is to have our local models, Quinn and

**[02:26:05] - [02:26:07]**

Dileep Karri: Gamma can be used safely.

**[02:26:09] - [02:26:10]**

Dileep Karri: Clear?

**[02:26:12] - [02:26:13]**

Dileep Karri: Good?

**[02:26:14] - [02:26:19]**

Dileep Karri: Why am I doing this, okay? Why should I look for a local model?

**[02:26:20] - [02:26:28]**

Dileep Karri: Now, how many of you have faced this problem of hitting limits with Codex ChatGPT models, or...

**[02:26:28] - [02:26:31]**

Dileep Karri: Say, cloud models.

**[02:26:34] - [02:26:43]**

Dileep Karri: Okay, you hit your limits. Don't you think it's a good thing to have if, in my ChatGPT desktop app.

**[02:26:43] - [02:26:46]**

Dileep Karri: where I have built a solid harness.

**[02:26:46] - [02:26:57]**

Dileep Karri: I can access my local models. That means I can change my pilot from the 5.6 to my local models. Yes or no?

**[02:27:01] - [02:27:17]**

Dileep Karri: people on the chat. Don't ask me other questions, focus on what I'm showing, because if you think about other things, you will miss this out, okay? Great. Now, here is the process. Once you have installed the local models on your system.

**[02:27:18] - [02:27:21]**

Dileep Karri: Go to Apps, Okay?

**[02:27:22] - [02:27:27]**

Dileep Karri: And on apps, you can see your Cloud Code and ChatGPT.

**[02:27:28] - [02:27:44]**

Dileep Karri: Okay? You can connect both your Cloud desktop as well as the ChatGPT desktop. My recommendation is to connect the ChatGPT desktop, because ChatGPT desktop has a better interaction with Cloud than Cloud.

**[02:27:44] - [02:27:55]**

Dileep Karri: I'll show you the cloud interaction, which is a little funny, okay? But for now, let us focus on ChatGPT. My ChatGPT is connected, and what models are available?

**[02:27:56] - [02:27:59]**

Dileep Karri: I'll go to Settings, just wait a moment.

**[02:27:59] - [02:28:09]**

Dileep Karri: So, in settings, I have GLM 5.3 Cloud, so I have this. I'll remove the... I can, have...

**[02:28:10] - [02:28:16]**

Dileep Karri: In terms of this, I will set up the Quinn Coder 2.5.

**[02:28:18] - [02:28:22]**

Dileep Karri: Okay, now I will say save and start ChatGPT.

**[02:28:25] - [02:28:28]**

Dileep Karri: So, these preferences are shared.

**[02:28:29] - [02:28:31]**

Dileep Karri: My ChatGPT is starting.

**[02:28:34] - [02:28:36]**

Dileep Karri: Okay? I have a new chat.

**[02:28:36] - [02:28:42]**

Dileep Karri: Now, when I open, Where I look at the models.

**[02:28:42] - [02:28:46]**

Dileep Karri: Okay, so whenever I'm doing this, right, it will shift to the codecs, because

**[02:28:46] - [02:29:04]**

Dileep Karri: It doesn't work so well in ChatGPT. So, in ChatGPT, if I try to shift, right, sometimes it keeps shifting to Codex, but you can come back. Here, I can go to Quinn 2.5 coder, and now, here, I am on my local models.

**[02:29:07] - [02:29:11]**

Dileep Karri: Okay? Here, I am on my local models.

**[02:29:12] - [02:29:22]**

Dileep Karri: Right? So the local model that I have got, with the same harness that I set up, I can now use it inside ChatGP.

**[02:29:23] - [02:29:37]**

Dileep Karri: I will not use this particular model, I will use the GLM 5.3 cloud model, and I'll use the high effort right now, okay? So that I can use this in this particular manner.

**[02:29:37] - [02:29:39]**

Dileep Karri: Okay? The process is...

**[02:29:39] - [02:29:49]**

Dileep Karri: Go to Olama app. There is the apps part over here. In the apps, ensure that you click on Connect for ChatGPT.

**[02:29:49] - [02:30:00]**

Dileep Karri: And then go to Settings, In settings down, add whichever models you want to see inside ChatGPT.

**[02:30:01] - [02:30:04]**

Dileep Karri: And then, once you do, and you say restart.

**[02:30:04] - [02:30:07]**

Dileep Karri: You will be able to see whichever models you want.

**[02:30:07] - [02:30:11]**

Dileep Karri: Okay? Just... Let me do a quick test of this.

**[02:30:12] - [02:30:17]**

Dileep Karri: So, let us say, can you search... with parallel.

**[02:30:20] - [02:30:26]**

Dileep Karri: news on... Grok... 4.7.

**[02:30:26] - [02:30:35]**

Dileep Karri: So now, it is using the GLM 5.3 of Olama, not my local... not my ChatGPT.

**[02:30:36] - [02:30:40]**

Dileep Karri: Okay? So what has happened? My pilot has changed.

**[02:30:40] - [02:30:51]**

Dileep Karri: I have the same harness, my same connectors, my same skills that I have set up on my ChatGPT. They will work seamlessly well with my local models.

**[02:30:52] - [02:30:59]**

Dileep Karri: But what you need to understand is my local models that I have set up are weaker. They are weaker pilots.

**[02:30:59] - [02:31:05]**

Dileep Karri: They are not as powerful as my ChatGPT 5.6 orders.

**[02:31:06] - [02:31:12]**

Dileep Karri: But for simple, reformatting, simple summarization. For simple tasks.

**[02:31:12] - [02:31:15]**

Dileep Karri: I can use my local model also.

**[02:31:16] - [02:31:22]**

Dileep Karri: These local models, when I download, they are absolutely free of cost. I don't have to pay anything.

**[02:31:22] - [02:31:28]**

Dileep Karri: But the problem is, the restriction is on the size of your laptop.

**[02:31:29] - [02:31:46]**

Dileep Karri: So that way, you can use your same ChatGPT app, switch models to local models, etc, that you can use. Plus, if you are using local models, none of the data is leaving your system technically.

**[02:31:47] - [02:31:52]**

Dileep Karri: So, any kind of compliances that you're working with, etc, you are safe that way.

**[02:31:54] - [02:31:55]**

Dileep Karri: Clear?

**[02:31:56] - [02:32:03]**

Dileep Karri: Let me run through all the steps in a format so that you are all clear with how you can do this.

**[02:32:03] - [02:32:05]**

Dileep Karri: Step 1.

**[02:32:06] - [02:32:08]**

Dileep Karri: Go to Olama.com.

**[02:32:10] - [02:32:11]**

Dileep Karri: Step 2.

**[02:32:12] - [02:32:22]**

Dileep Karri: install the desktop app. Without the desktop app, it will not work. You install the Olama desktop app, as well as the ChatGPT,

**[02:32:24] - [02:32:26]**

Dileep Karri: Or cloud desktop app.

**[02:32:31] - [02:32:37]**

Dileep Karri: Okay? It is the ChatGPT Cloud desktop app. Then, on olama.com.

**[02:32:41] - [02:32:43]**

Dileep Karri: Try to search for Gamma.

**[02:32:44] - [02:32:57]**

Dileep Karri: or Quinn models. These are good models, generally useful. Others, if you are wanting other choices, you can check on KUMI DeepSeek also. I would suggest Gemma Quinn

**[02:32:58] - [02:32:59]**

Dileep Karri: To be on the safe side.

**[02:32:59] - [02:33:05]**

Dileep Karri: Okay? Half the size... Off Ram.

**[02:33:06] - [02:33:15]**

Dileep Karri: Okay, don't be greedy, don't go for big models, right? Because if you are going for big models, they will crash your system.

**[02:33:17] - [02:33:23]**

Dileep Karri: Okay? Then, after you do this, Go to... Holama?

**[02:33:24] - [02:33:25]**

Dileep Karri: Apps?

**[02:33:27] - [02:33:27]**

Dileep Karri: Connect.

**[02:33:28] - [02:33:30]**

Dileep Karri: ChatGPT.

**[02:33:33] - [02:33:35]**

Dileep Karri: Then... Holama?

**[02:33:39] - [02:33:45]**

Dileep Karri: Settings... Okay? Select which models you want to see.

**[02:33:54] - [02:34:01]**

Dileep Karri: and then you say save and restart. If the ChatGPT app does not restart, you close it and

**[02:34:02] - [02:34:09]**

Dileep Karri: restart, then you can make it work. For people who are not able to see the ChatGPT options.

**[02:34:09] - [02:34:27]**

Dileep Karri: Close ChatGPT, reinstall Olama, sometimes in one or two installs, or update Ollama installation, you should be able to see it, okay? One or two times, you'll have to do it. Not very seamless, but I have tried it one or two times. I could see ChatGPT coming up.

**[02:34:28] - [02:34:39]**

Dileep Karri: Okay? Little painful, but if you are able to persist and do it, you should be able to see the options in your ChatGPT. Then, open up ChatGPT,

**[02:34:39] - [02:34:41]**

Dileep Karri: You open a new chat.

**[02:34:41] - [02:34:49]**

Dileep Karri: Okay? You can select whichever model you want to select. I'll select KLM Crowd3. I can say... Hi.

**[02:34:50] - [02:35:07]**

Dileep Karri: Okay? And now I can ask it what are questions I want. It'll work with the same skills you have installed. It will work with the same, you know, the different items that you have installed, like your connectors. You don't have to worry about it at all.

**[02:35:09] - [02:35:24]**

Dileep Karri: Okay? For people who are facing trouble with respect to this part, that you are not able to find the thing, okay? Please have patience. Use search, okay? You can say, on olama.

**[02:35:25] - [02:35:31]**

Dileep Karri: dot scene... the chat GPT... Connect... option.

**[02:35:44] - [02:35:56]**

Dileep Karri: Okay? Try to troubleshoot it, it will happen. Okay, so I have tried it multiple times, and we can do that. Okay? Now the question that some of you might have, can Claude also connect?

**[02:35:56] - [02:36:00]**

Dileep Karri: Yes, Claude can collect, but there is a problem.

**[02:36:00] - [02:36:09]**

Dileep Karri: When you connect Cloud Rite, the display will always be Fable, Opus, Sonnet, Haiku, and Sonnet. You cannot change the display.

**[02:36:10] - [02:36:14]**

Dileep Karri: Underneath that, you have to choose which... what does fable mean?

**[02:36:15] - [02:36:16]**

Dileep Karri: What does O.S. mean?

**[02:36:17] - [02:36:27]**

Dileep Karri: What does sonnet mean? And you have to remember in your head, fable means this model, Opus means this model, sonnet means this model, CAICU means this model.

**[02:36:28] - [02:36:30]**

Dileep Karri: Very weird in terms of UI.

**[02:36:30] - [02:36:33]**

Dileep Karri: Right? But that is how Claude has set it up.

**[02:36:34] - [02:36:48]**

Dileep Karri: Okay, that's why ChatGPT app has given official access to Olama, that's why I'm showing it to you on ChatGPT app, so that you can see how it is very well connected there.

**[02:36:49] - [02:36:58]**

Dileep Karri: Okay? So then, if you want it on Cloud, you will have to set up those models. So for Claude, the way is you go to Apps.

**[02:36:58] - [02:37:02]**

Dileep Karri: You say connect for Claude, the Cloud desktop.

**[02:37:03] - [02:37:05]**

Dileep Karri: And then you come to Settings.

**[02:37:07] - [02:37:22]**

Dileep Karri: In settings, you have to choose, okay, you know what, I will use DeepSeek over here, I will use Gamma3 over here, I will use Gamma 4 over here, and here I'll use some other things.

**[02:37:23] - [02:37:29]**

Dileep Karri: Okay? So then, if you are choosing Fable, you will be using DeepSeek version 4.1.

**[02:37:29] - [02:37:39]**

Dileep Karri: Okay? If you are using Opus, you'll use 3, KMA 3. The other disadvantage is, when you are using it in this mode, you cannot use Claude

**[02:37:40] - [02:37:45]**

Dileep Karri: Opus Fable models, they are locked out, unless, until you disconnect OLAM.

**[02:37:46] - [02:37:50]**

Dileep Karri: Whereas, in case of ChatGPT app, they go exist.

**[02:37:51] - [02:37:52]**

Dileep Karri: Clear, everyone.

**[02:37:55] - [02:37:58]**

Dileep Karri: Okay, everybody, is it clear?

**[02:38:04] - [02:38:05]**

Dileep Karri: Perfect.

**[02:38:09] - [02:38:17]**

Dileep Karri: Folks, I have repeated it multiple times, so I cannot repeat this overall, okay? Kindly check the recording.

**[02:38:21] - [02:38:29]**

Dileep Karri: All right. Now, one, other question which, you know, I see people, kind of keep asking.

**[02:38:30] - [02:38:34]**

Dileep Karri: Right? Whenever you are working with

**[02:38:35] - [02:38:45]**

Dileep Karri: Olama and, any local models, right? Expect them to be not as great as your state-of-the-art ChatGPT Cloud, etc.

**[02:38:46] - [02:38:47]**

Dileep Karri: That's why Claude...

**[02:38:48] - [02:38:54]**

Dileep Karri: When you use Claude with OLAMA, a lot of things, a lot of restrictions are there. It'll act as this thing.

**[02:38:54] - [02:39:01]**

Dileep Karri: Now, there are some other platforms also. For example, there are platforms like Mischi and LM Studio.

**[02:39:03] - [02:39:17]**

Dileep Karri: Okay, so there are platforms like Mischi and LM Studio through which you can download the local models, but the reason I am showing it via OLAMA only is so that you can use your ChatGPT app.

**[02:39:20] - [02:39:31]**

Dileep Karri: Because we set up a strong harness on the ChatGPT app, so whatever harness we are trying to use, you are able to work it in that way.

**[02:39:31] - [02:39:37]**

Dileep Karri: For example, let me open ChatGPT. I am on KUMI K3 Cloud, and I will say.

**[02:39:40] - [02:39:46]**

Dileep Karri: Go to my Gmail, Get me the latest.

**[02:39:47] - [02:39:50]**

Dileep Karri: issue of... Staying ahead.

**[02:39:50] - [02:39:52]**

Dileep Karri: AI newsletter.

**[02:39:55] - [02:40:01]**

Dileep Karri: Okay, go to my Gmail, get me the latest issue of the Staying Ahead AI newsletter, and prepare

**[02:40:01] - [02:40:06]**

Dileep Karri: a small... Somebody... PowerPoint.

**[02:40:07] - [02:40:08]**

Dileep Karri: Presentation.

**[02:40:11] - [02:40:15]**

Dileep Karri: So, my cockpit is the same.

**[02:40:16] - [02:40:29]**

Dileep Karri: Okay? My cockpit is the same. I have changed the pilot. The pilot has been changed from GPT 5.6 Models to KUMI K3 Cloud, and you see, it is able to

**[02:40:29] - [02:40:34]**

Dileep Karri: call my Gmail, do everything, so my harness is intact.

**[02:40:35] - [02:40:39]**

Dileep Karri: Whereas, I'm able to switch the models.

**[02:40:44] - [02:40:47]**

Dileep Karri: So, it is the searching for the models.

**[02:40:54] - [02:41:02]**

Dileep Karri: Now, again, this entire task might not be as elegant as when I use a GPT or a clot.

**[02:41:04] - [02:41:08]**

Dileep Karri: Okay? Maybe when I use a GPT model, this would be...

**[02:41:09] - [02:41:20]**

Dileep Karri: much smoother. For example, I'll run it in parallel. I'll go to a new chat, I'll take this...

**[02:41:38] - [02:41:47]**

Dileep Karri: See, it is searching my memory, whereas the previous one could not search my memory, because there is no memory access that harness is not

**[02:41:47] - [02:41:49]**

Dileep Karri: Available there.

**[02:41:52] - [02:41:53]**

Dileep Karri: Okay, still searching.

**[02:42:20] - [02:42:22]**

Dileep Karri: I will save this email.

**[02:42:22] - [02:42:24]**

Dileep Karri: Comes... Okay.

**[02:42:25] - [02:42:28]**

Dileep Karri: Now it has searched Staying Ahead AI Newsletter.

**[02:42:29] - [02:42:31]**

Dileep Karri: It is going to search for this.

**[02:42:37] - [02:42:44]**

Dileep Karri: Folks, I'll park the questions right now, because I'm explaining some important points. Please have focus on this.

**[02:42:55] - [02:42:58]**

Dileep Karri: So it has figured out there are some emails.

**[02:43:03] - [02:43:09]**

Dileep Karri: So, it is reading the PowerPoint skill to make the PowerPoint, so everything is running on KUMI K3.

**[02:43:09] - [02:43:10]**

Dileep Karri: Right now.

**[02:43:26] - [02:43:28]**

Dileep Karri: Let us check on 5.6.

**[02:43:48] - [02:44:06]**

Dileep Karri: So, currently, I just asked it to create the PowerPoint. Right now, I'm not giving any information. I'm just asking to check if my harness is working intact or not. I just changed the pilot, I'm just checking to see if my harness is working well, and everything is working properly.

**[02:44:28] - [02:44:37]**

Dileep Karri: Okay, let us give it some time. Let me kind of talk to you a little bit about this open models, okay?

**[02:44:41] - [02:44:49]**

Dileep Karri: So... Most of the models here are open weight models.

**[02:44:52] - [02:44:57]**

Dileep Karri: These are not open... complete open-source models.

**[02:44:59] - [02:45:03]**

Dileep Karri: Okay? I'll give you the distinction between that. Okay?

**[02:45:03] - [02:45:06]**

Dileep Karri: Let me show you the picture.

**[02:45:24] - [02:45:27]**

Dileep Karri: How many of you have seen this sound mixer?

**[02:45:28] - [02:45:36]**

Dileep Karri: Okay? This thing in parties, in DJs, you would have seen this, right? So this is what is called a sound mixer.

**[02:45:37] - [02:45:57]**

Dileep Karri: Right? Now, I'll tell you the difference between the open-source model as well as the open weight model, okay? In the open source model, whenever I give a song, along with the song, I give the instrument, the instrument has been tuned to

**[02:45:57] - [02:45:58]**

Dileep Karri: what extent?

**[02:45:58] - [02:46:09]**

Dileep Karri: how is the instrument tuned? What is the volume? What is everything? What is the frequency? Etc? All of that. Then, it is, like, open source.

**[02:46:09] - [02:46:16]**

Dileep Karri: Whereas in OpenWaits, I'm only sharing the snapshot of this settings.

**[02:46:16] - [02:46:19]**

Dileep Karri: And telling that this is my setting for the model.

**[02:46:19] - [02:46:30]**

Dileep Karri: I'm not exactly going into the make of my instrument. Like, if I'm using a flute, what flute it is? What make of the flute it is? I'm not revealing that part.

**[02:46:30] - [02:46:39]**

Dileep Karri: I am telling, for flute, I am putting this setting. For violin, I am putting this setting. For others, I am putting this setting.

**[02:46:39] - [02:46:46]**

Dileep Karri: So, I am opening up some part of it, but I cannot replicate the model as is.

**[02:46:47] - [02:46:52]**

Dileep Karri: Okay? For example, if I'm thinking of a recipe, Right? For recipe.

**[02:46:52] - [02:47:03]**

Dileep Karri: Think of it like this. When I say open-source recipe, I talk about each and every recipe, where did I source it from, and how much I am using.

**[02:47:03] - [02:47:11]**

Dileep Karri: For a open weights recipe, I will tell these are the ingredients, but I don't reveal where I source them from.

**[02:47:11] - [02:47:19]**

Dileep Karri: for replicating the recipe exactly, where I source the ingredients from also becomes very important. That, I will keep a secret.

**[02:47:20] - [02:47:29]**

Dileep Karri: So, a lot of times, these open models, when companies release, they release open weight models, they don't release the open-source models.

**[02:47:29] - [02:47:38]**

Dileep Karri: Is this point clear? So that next time when somebody says open weight, you understand the difference between open weight and open source.

**[02:47:40] - [02:47:43]**

Dileep Karri: Okay, they kind of hide it a little bit.

**[02:47:44] - [02:47:50]**

Dileep Karri: Now, under this, right, all of these models are given under licenses.

**[02:47:50] - [02:47:54]**

Dileep Karri: Okay? There are mainly two types of licenses.

**[02:47:54] - [02:48:05]**

Dileep Karri: Okay? One is called the MIT License, the other is the GPL license. I will explain it to you very analogically, what each license means.

**[02:48:06] - [02:48:07]**

Dileep Karri: Okay?

**[02:48:07] - [02:48:11]**

Dileep Karri: MIT license, okay? So, let me explain that.

**[02:48:12] - [02:48:18]**

Dileep Karri: two types of licenses. There are multiple licenses, but these are the two main licenses which are available.

**[02:48:19] - [02:48:26]**

Dileep Karri: MIT license is like, let us assume that I am running a bakery.

**[02:48:27] - [02:48:30]**

Dileep Karri: And I have a sourdough recipe.

**[02:48:31] - [02:48:35]**

Dileep Karri: Which is my invention of sourdough recipe.

**[02:48:35] - [02:48:39]**

Dileep Karri: Okay? I have a bakery, I have a sourdough recipe.

**[02:48:40] - [02:48:49]**

Dileep Karri: Okay? Let us understand what MIT license means. MIT license means I give my sourdough recipe to everyone.

**[02:48:56] - [02:48:59]**

Dileep Karri: You are free to do whatever you want with it.

**[02:48:59] - [02:49:11]**

Dileep Karri: You can change the recipe, you can do anything you want, I am okay, as long as you tell me that, or you tell the world that this is taken from the sourdough recipe by Dhli.

**[02:49:11] - [02:49:14]**

Dileep Karri: So, only I ask for credit.

**[02:49:18] - [02:49:29]**

Dileep Karri: Okay? MIT license, I take the Sourdough recipe, anybody can use it, you can copy it however you want, I don't care. If you use my recipe, just give me credit.

**[02:49:31] - [02:49:39]**

Dileep Karri: Okay, that is the MIT license. Now, GPL licensees... Sourdough recipe.

**[02:49:43] - [02:49:48]**

Dileep Karri: Use it however you want, okay? But... Very, very big, important thing.

**[02:49:49] - [02:50:00]**

Dileep Karri: When you make... Changes... You have to... Share with the world.

**[02:50:05] - [02:50:13]**

Dileep Karri: That means you cannot say that I have taken the sourdough recipe, I made some changes, so now this is secret.

**[02:50:13] - [02:50:28]**

Dileep Karri: In GPL license, you have to share the recipe with the entire world, irrespective. In the MIT case, you make the changes to the recipe, you only say, inspired by Dilip's Sourdough recipe, I am happy. I don't bother.

**[02:50:28] - [02:50:38]**

Dileep Karri: But in GPL, I will force you to be good. I will force you to say, you made Sourdough recipe 2.0. I want you to share with the world.

**[02:50:38] - [02:50:48]**

Dileep Karri: Okay? So therefore, anytime you want to build commercial products with anything, ensure that you see that there is a MIT license involved.

**[02:50:48] - [02:50:57]**

Dileep Karri: Okay? So then, if MIT license is there, it means that you can happily go through it. In case you see some different license.

**[02:50:57] - [02:51:02]**

Dileep Karri: use perplexity or AI to understand what the license is.

**[02:51:02] - [02:51:05]**

Dileep Karri: So that you can use all of it.

**[02:51:06] - [02:51:07]**

Dileep Karri: Okay?

**[02:51:08] - [02:51:21]**

Dileep Karri: Let's recap everything from the beginning, and then we will stop the session right now. Okay, what we try to do, in a way, this entire session, right, we made a huge jump

**[02:51:22] - [02:51:33]**

Dileep Karri: from this AI agent that we kept talking about till last week, Vaibav also talked about it, we broke down AI agent into AI model.

**[02:51:35] - [02:51:39]**

Dileep Karri: Bless... Agent harness, or harness.

**[02:51:40] - [02:51:49]**

Dileep Karri: Which is the supporting tool slash skill... Which you could use.

**[02:51:49] - [02:51:58]**

Dileep Karri: Okay? Now, for this, for the model, it can be chat GPT, It can be clawed.

**[02:51:59] - [02:52:03]**

Dileep Karri: It can be GrogBot, it can be anybody.

**[02:52:04] - [02:52:10]**

Dileep Karri: Okay? You have the... sorry, Grokpot is not this thing, Grok 4.7. Anybody can be there.

**[02:52:10] - [02:52:11]**

Dileep Karri: Morning.

**[02:52:11] - [02:52:14]**

Dileep Karri: These models can work with Harvest.

**[02:52:14] - [02:52:19]**

Dileep Karri: Okay? And what we saw was how to have a strong harness.

**[02:52:21] - [02:52:27]**

Dileep Karri: So, to build a strong harness, you need to understand what is your use case.

**[02:52:28] - [02:52:34]**

Dileep Karri: Okay, for your use case, what are the tools or connectors you need to connect?

**[02:52:35] - [02:52:44]**

Dileep Karri: So you can check out plugins by ChatGPT, connectors by Cloud, search through them, understand what are the tools which are required.

**[02:52:44] - [02:52:50]**

Dileep Karri: And correspondingly, what are the skills which are required? Skills, you can search on skills.sh.

**[02:52:51] - [02:52:58]**

Dileep Karri: And you can add those skills. You can use the tools, you can use the skills, and build a strong harness.

**[02:52:59] - [02:53:06]**

Dileep Karri: If you build a strong harness, later on, if you want to switch your model.

**[02:53:09] - [02:53:12]**

Dileep Karri: You can do it courtesy Olama.

**[02:53:13] - [02:53:24]**

Dileep Karri: Where you can switch your models completely, where you can take your existing models, swap it with any of the Olama models, and they will work as and with the same.

**[02:53:25] - [02:53:34]**

Dileep Karri: Okay, so let us check what is happening over here. So, one of them is done. I think the GPT part is done. Let us see how it has done the summary.

**[02:53:35] - [02:53:38]**

Dileep Karri: So I did a short, thing of...

**[02:53:39] - [02:53:43]**

Dileep Karri: The takeaway, 4th August issue, it has built the PPT.

**[02:53:43] - [02:53:45]**

Dileep Karri: Then let us look at this one.

**[02:53:50] - [02:53:51]**

Dileep Karri: It also built it.

**[02:53:51] - [02:53:54]**

Dileep Karri: Again, it built it in a slightly different manner.

**[02:53:59] - [02:54:03]**

Dileep Karri: Okay? So, that is the entire path.

**[02:54:04] - [02:54:07]**

Dileep Karri: Okay? Now, for those of you who are...

**[02:54:07] - [02:54:19]**

Dileep Karri: Looking at skills.sh, skills.sh is a library of different skills which are available. So, suppose you want any skills, search for the skills, you can find those skills over here.

**[02:54:19] - [02:54:22]**

Dileep Karri: Okay, for example, there is this,

**[02:54:23] - [02:54:27]**

Dileep Karri: matte Pocock Skills, right? You can go for the prompt.

**[02:54:27] - [02:54:33]**

Dileep Karri: Copy the prompt, put it in ChatGPT or Cloud, it will install the skill right away on your system.

**[02:54:35] - [02:54:53]**

Dileep Karri: Okay, explore this, a little bit. You will know how do you build an extremely strong harness that could be required, and as you saw in ChatGPT, when you have a strong harness with the right skills, with the right, this thing, etc.

**[02:54:54] - [02:54:57]**

Dileep Karri: Okay? You can build anything that you want.

**[02:54:59] - [02:55:10]**

Dileep Karri: Okay? Now, what... last thing, what I'll do is, I will build a proper skill right in front of you, so that you know how the skill gets picked.

**[02:55:10] - [02:55:14]**

Dileep Karri: So the skill I'm trying to build is the...

**[02:55:23] - [02:55:36]**

Dileep Karri: no AI slob skill. So I want to build a skill where I don't want AI slob, I want to filter out AI slob whenever AI is generating a piece of text.

**[02:55:36] - [02:55:41]**

Dileep Karri: Okay? So, for this, I will go to skills.sh.

**[02:55:43] - [02:55:46]**

Dileep Karri: And I'll search for AI slot.

**[02:55:47] - [02:55:49]**

Dileep Karri: See which are the skills which are available.

**[02:55:50] - [02:55:56]**

Dileep Karri: So, there are multiple ones. So, for example, there is this one called No AI Slop.

**[02:55:56] - [02:55:58]**

Dileep Karri: I can open this.

**[02:55:59] - [02:56:03]**

Dileep Karri: And I can copy this prompt. I'll copy the prompt, I will not run it anything.

**[02:56:04] - [02:56:05]**

Dileep Karri: I'll copy the prompt.

**[02:56:06] - [02:56:09]**

Dileep Karri: Keep it over here.

**[02:56:12] - [02:56:19]**

Dileep Karri: Okay, so what I'm doing is, instead of command, I'm going to the prompt, copying the prompt, pasting it in ChatGPT.

**[02:56:23] - [02:56:30]**

Dileep Karri: Okay? Then... Let us say I want to use this also.

**[02:56:31] - [02:56:37]**

Dileep Karri: Go to the prompt, copy it, Paste.

**[02:56:39] - [02:56:45]**

Dileep Karri: Okay? Nothing technical, I am just copy-pasting the prompts that are available.

**[02:56:46] - [02:56:56]**

Dileep Karri: Then, I will say... Pilled me a skill Combined from the above.

**[02:56:57] - [02:56:58]**

Dileep Karri: \*\*\*\*\*

**[02:56:59] - [02:57:01]**

Dileep Karri: and remove.

**[02:57:01] - [02:57:04]**

Dileep Karri: AI slot from... Bright deal.

**[02:57:10] - [02:57:11]**

Dileep Karri: And enter.

**[02:57:13] - [02:57:27]**

Dileep Karri: Okay? So, on, this skills, I went to the starting, I searched for AI slob, I found the top two skills, okay? I opened one skill, I took the prompt, copied it.

**[02:57:28] - [02:57:33]**

Dileep Karri: I went to another skill, okay? For example, I say AI swap.

**[02:57:35] - [02:57:39]**

Dileep Karri: I opened another skill, I copied it.

**[02:57:40] - [02:57:49]**

Dileep Karri: Then, I copied both the skills, and I said, build me a skill combined from the above, which can remove AI slot from writing.

**[02:57:50] - [02:57:56]**

Dileep Karri: So then, it will build me a combined skill that is, you know, I can use.

**[02:57:56] - [02:58:04]**

Dileep Karri: To make it even better, okay, to make it even better, what I'll do is... go to my Gmail.

**[02:58:05] - [02:58:13]**

Dileep Karri: None... writing... Patterns... from my emails.

**[02:58:14] - [02:58:19]**

Dileep Karri: And... Addict... Duh?

**[02:58:19] - [02:58:26]**

Dileep Karri: combined... Non... AI slaps still work.

**[02:58:27] - [02:58:29]**

Dileep Karri: You are building.

**[02:58:33] - [02:58:33]**

Dileep Karri: Okay?

**[02:58:34] - [02:58:38]**

Dileep Karri: So, what you're doing is, you are saying, I'm using my connector, Gmail.

**[02:58:38] - [02:58:50]**

Dileep Karri: I am asking my Gmail to go to the emails that I have written, and learn the writing patterns from my emails, and add it to the combined non-AI swap skill that you are building.

**[02:58:51] - [02:59:00]**

Dileep Karri: You can combine as many skills as you want. There is no limit, but this is an intelligent way to build a strong harness. So don't...

**[02:59:00] - [02:59:14]**

Dileep Karri: directly install the skill, try to add a little flavor of yours. Can I add my own branding? Can I add my own writing pattern? What are the small, small things I can do?

**[02:59:14] - [02:59:17]**

Dileep Karri: So that I can use these skills.

**[02:59:20] - [02:59:23]**

Dileep Karri: Alright, so now it will keep, writing.

**[02:59:25] - [02:59:28]**

Dileep Karri: And it can build about this entire skills.

**[02:59:28] - [02:59:45]**

Dileep Karri: Okay? For... just to recap last point, AI slot removal means when AI does writing, you will always find that AI writing has a particular pattern, it feels very jarring, it doesn't feel human-like, so you want to build a skill so that

**[02:59:45] - [02:59:57]**

Dileep Karri: The AI writing is filtered. The way I built it is, I went to skills.sh, I searched for AI slot, I found two skills I liked, I copied the prompts.

**[02:59:57] - [03:00:09]**

Dileep Karri: I then said, build me a skill combined from the above, and as a third level, I said, go to my Gmail, learn writing patterns from my emails, and add it to the non-AI swap skill.

**[03:00:13] - [03:00:19]**

Dileep Karri: Right? So that's how you could build your own skills, etc.

**[03:00:20] - [03:00:21]**

Dileep Karri: I...

**[03:00:21] - [03:00:36]**

Dileep Karri: Now, some of you might have felt the session to be a little heavy. Some of you would have felt the session to be a little technical, etc, and all that, but please check the recording once or twice, it is not so hard.

**[03:00:36] - [03:00:47]**

Dileep Karri: Right? The idea was to level up. I have kind of told you a lot of things in this session, mainly to set up this harness and, you know, kind of make it well for you.

**[03:00:48] - [03:00:58]**

Dileep Karri: All right? Hope you found the session useful. I'll come back for a few more sessions where we are going to go in much more detail into some other topics.

**[03:00:58] - [03:01:06]**

Dileep Karri: All right? We will not have any workbook today, right? Sumedha will tell you what are the next steps. I think we'll have just a Q&A session, right, Sumedha?

**[03:01:07] - [03:01:07]**

Dileep Karri: Yep.

**[03:01:07] - [03:01:08]**

Sumedha: That's good.

**[03:01:08] - [03:01:11]**

Dileep Karri: Yeah, we'll just have the Q&A sessions on this.

**[03:01:11] - [03:01:12]**

Dileep Karri: All right?

**[03:01:12] - [03:01:13]**

Sumedha: So much, Philippe.

**[03:01:13] - [03:01:13]**

Dileep Karri: Yeah.

**[03:01:15] - [03:01:21]**

Sumedha: Also, if you can drop your socials, I saw somebody asking for it, so that will be great.

**[03:01:22] - [03:01:23]**

Dileep Karri: Gosh, sure.

**[03:01:24] - [03:01:33]**

Sumedha: As for the people asking about recordings, do not worry, the recordings will be available in your LMS, within 12 hours.

**[03:01:35] - [03:01:45]**

Sumedha: Alright, so thank you so much, Dilip, for taking this session up. It was a really insightful session, and I will let you go have some rest and take it up from here.

**[03:01:48] - [03:01:54]**

Dileep Karri: Thank you, and I'll see you soon for another session very shortly. Yeah? Thank you. Thank you, everyone.

**[03:01:54] - [03:01:55]**

Sumedha: Cute.

**[03:01:56] - [03:01:57]**

Sumedha: Alright.

**[03:01:57] - [03:02:07]**

Sumedha: So, also, people, the poll is up. Please do remember to, vote in the poll and share your feedback, share your review.

**[03:02:07] - [03:02:17]**

Sumedha: So that, we know which session is landing in what way for you. Yesterday's recordings are available, don't worry, it is available in your LMS.

**[03:02:20] - [03:02:35]**

Sumedha: The session transcripts are available under your post-reads. So, if you go to your post-read section, with the summary, you will also find the session transcript, so you can download it from there.

**[03:02:37] - [03:02:39]**

Sumedha: Alright.

**[03:02:42] - [03:03:04]**

Sumedha: Okay, so from day 6 and day 7, all the queries that are coming in. So you just have to scroll down. So the first recording will be visible right when you click on session recording, but for looking at the second recording, you have to scroll down, because it's two sessions, right? So if you scroll down, you will be able to see the second recording as well.

**[03:03:08] - [03:03:10]**

Sumedha: Alright. Now...

**[03:03:13] - [03:03:21]**

Sumedha: Perfect. Now, as you know, today there is no workbook, so we will be having a Q&A. So,

**[03:03:21] - [03:03:35]**

Sumedha: we will be breaking in our breakout rooms, and we will be having a Q&A. Before that, I have a quick announcement, but, do you guys need a break today before we go for the breakout rooms?

**[03:03:37] - [03:03:38]**

Sumedha: Nope.

**[03:03:38] - [03:03:41]**

Sumedha: Okay, I see a not- lot of no's.

**[03:03:41] - [03:03:43]**

Sumedha: A lot of yeses as well.

**[03:03:49] - [03:04:08]**

Sumedha: Okay, a lot of no's today, and a lot of yeses, and some 10 minutes as well. So, what we can do is, we can take a quick 5 minutes break, but let me just quickly announce something before we go for our break, and come back and join the breakout rooms, right? So, do not, like.

**[03:04:08] - [03:04:15]**

Sumedha: forget that tomorrow we are going to announce about your hackathon groups. So, in case,

**[03:04:15] - [03:04:35]**

Sumedha: you have any plans or anything, please do park it aside and make sure to join our session. It is very important for you to know that which group you belong to, how you can connect with your teammates. That is what we will be discussing in tomorrow's session, post the session is done, right? So...

**[03:04:35] - [03:04:43]**

Sumedha: With that, we will go ahead, take a quick 5 minutes break, and we will come back, go for the breakout rooms for the Q&A session.

**[03:04:44] - [03:04:45]**

Sumedha: Hope that's alright.

**[03:04:46] - [03:04:52]**

Sumedha: Yeah, once we start the break, team, in the meantime, we can share the reflection link in the chat.

**[03:05:04] - [03:05:08]**

Sumedha: Hackathon will be from Thursday.

**[03:05:08] - [03:05:19]**

Sumedha: to, Saturday, or you can say Sunday morning. So, we will talk more about it, don't worry. So, we will give you all the details out there, don't worry.

**[03:05:19] - [03:05:20]**

Sumedha: Dang.

**[03:05:21] - [03:05:38]**

Sumedha: There you go. Team has already shared the reflection link in the chat. You can, generate your badges for Day 9 using the reflection link. And with that, let us quickly go ahead, take a quick 5 minutes break, and we will come back for the,

**[03:05:38] - [03:05:40]**

Sumedha: breakout rooms.

**[03:11:02] - [03:11:27]**

Sumedha: Alright, I do see a lot of questions, around the Hackathon, so, do not worry, people. We will discuss about everything, each and everything about Hackathon tomorrow and day after tomorrow. You will have no problem accessing anything or understanding anything about Hackathon, so don't worry about it, we will be discussing it, right? So, park your questions for now.

**[03:11:27] - [03:11:48]**

Sumedha: And focus on what we are learning today, right? And whatever questions you have related to the content, please go ahead and ask in the breakout rooms. All your hackathon-related, logistic-related questions, please channel it through the tech support channel, and we will... or the support at the [rateoutskill.com](https://rateoutskill.com) channel, and we will look into it, right?

**[03:11:48] - [03:11:52]**

Sumedha: Also, I did see some, but some of you mentioned that

**[03:11:52] - [03:12:07]**

Sumedha: you are not able to see the recordings, so the team is getting it checked. If you are not able to see, do not worry, we will check your accounts, and we will fix it, okay? So, give us some 10 minutes, and the team is right away checking it, okay?

**[03:12:09] - [03:12:17]**

Sumedha: Alright, with that, we... I hope we are good to go for the breakout rooms. Are we? Are we ready to go for the breakout rooms?

**[03:12:24] - [03:12:25]**

Sumedha: Yes?

**[03:12:26] - [03:12:35]**

Sumedha: A few more. Alright, there you go. With that, let me quickly create the breakout rooms and share it with you.

**[03:12:36] - [03:12:42]**

Sumedha: And... There you go.

**[03:12:42] - [03:12:50]**

Sumedha: All the breakout rooms are open. Go ahead, ask your questions, and once you are done, we will be closing the session.

**[03:13:22] - [03:13:34]**

Sumedha: Also, in case anybody have joined from the app, I have shared the webinar ID in the chat. You can go ahead and join from the app, so that you can also join the breakout rooms.

**[03:55:32] - [03:55:32]**

Samruddhi Mokal Outskill: Of course.

**[03:55:32] - [03:55:34]**

Ritesh Outskill: 20 times.

**[03:55:37] - [03:55:50]**

Sumedha: Alright, that was it for today. Thank you so much, commenters, for taking this up and being so patient with us. Thank you so much, and I will let you go have some rest.

**[03:55:50] - [03:55:57]**

Sumedha: And thank you so much, learners, for staying back, asking your doubts, and I hope this was,

**[03:55:57] - [03:56:00]**

Sumedha: Useful and helpful for you.

**[03:56:00] - [03:56:20]**

Sumedha: So, thank you, everyone, for joining in, and as you know, do not miss out tomorrow's session. We have a very interesting session planned for you. With that, we will be having the hackathon plan, hackathon plan discussing and how to find your groups. We will be disclosing tomorrow. So, do not miss out on tomorrow's session, and yeah.

**[03:56:20] - [03:56:24]**

Sumedha: I hope to see you tomorrow again. Thank you so much!
