

Day 4 Office Hours Session

00:03 - 00:08

Audio shared by Sumedha: City lights like diamonds blink on tight streets.

00:08 - 00:14

Audio shared by Sumedha: Honking horns play symphonies where chaos meets.

00:14 - 00:24

Audio shared by Sumedha: Like shadows on a neon-painted stage. In this moonlit traffic, let's turn another page

00:25 - 00:29

Audio shared by Sumedha: Morning coffee symphonies rise with the dawn.

00:30 - 00:34

Audio shared by Sumedha: Busy bees in their carpool, just carry on.

00:36 - 00:41

Audio shared by Sumedha: Street lights fade, but dreams we've had are still surreal.

00:41 - 00:46

Audio shared by Sumedha: In the smooth trap, Our secrets, they conceal.

00:59 - 01:01

Audio shared by Sumedha: Who is this guy is true.

01:03 - 01:06

Audio shared by Sumedha: Every life is story hashed upon

01:09 - 01:12

Audio shared by Sumedha: Boys scream with faces we don't recognize.

01:14 - 01:17

Audio shared by Sumedha: Every mile... within our...

01:22 - 01:24

Audio shared by Sumedha: We left behind.

01:25 - 01:30

Audio shared by Sumedha: In this moment, traffic... Freedom's what we find.

01:30 - 01:35

Audio shared by Sumedha: Silent radios play the songs of yesteryear.

01:36 - 01:38

Audio shared by Sumedha: Windows down the wind.

01:38 - 01:41

Audio shared by Sumedha: Our navigator here.

01:47 - 01:48

Audio shared by Sumedha: Life's been the past.

01:49 - 01:50

Audio shared by Sumedha: Finally!

02:58 - 03:02

Audio shared by Sumedha: Every life story etched upon the wall.

03:37 - 03:51

Audio shared by Sumedha: I walked these halls a thousand times, felt the silence read the signs, hiding shadows, biting tongues, I thought I'd change, I fit, I was used to it.

03:51 - 04:01

Audio shared by Sumedha: I tried to fit inside your world Bend myself a broken stead. Every whisper, every lie kept me hanging in this rope.

04:12 - 04:15

Audio shared by Sumedha: Don't be long, I should stay too long.

04:25 - 04:34

Audio shared by Sumedha: I held my breath, I played along Felt the weight of staying strong Every promise wore me thin Still I stayed and let you in.

04:35 - 04:37

Audio shared by Sumedha: I tried to fit inside your world.

04:38 - 04:41

Audio shared by Sumedha: And myself a broken stay, every whisper.

04:42 - 04:45

Audio shared by Sumedha: Got me hanging in this road.

04:56 - 04:57

Audio shared by Sumedha: belong.

04:57 - 04:59

Audio shared by Sumedha: I'll just stayed too long

05:09 - 05:18

Audio shared by Sumedha: Now it's crystal clear, I was just a ghost to you. No more waiting, no more pain, I'm not afraid to walk away

05:18 - 05:20

Audio shared by Sumedha: I just stayed too long

05:31 - 05:34

Audio shared by Sumedha: The way I feel like it.

05:41 - 05:43

Audio shared by Sumedha: I'll just stayed too long

06:00 - 06:01

Audio shared by Sumedha: I'll just stay tuned.

06:03 - 06:05

Audio shared by Sumedha: Now I'm gone.

06:05 - 06:07

Audio shared by Sumedha: I'll prove myself.

06:07 - 06:11

Audio shared by Sumedha: Try to fade along, I will find a place to belong.

07:15 - 07:16

Audio shared by Sumedha: Is this country?

07:17 - 07:20

Audio shared by Sumedha: Is this country? Is this country...

07:27 - 07:39

Audio shared by Sumedha: She's got surplus inhabitly drowned. Nair with frequently got a brown.

07:40 - 07:52

Audio shared by Sumedha: At work on a hill was she? And she's face says it, which you wasted. The sad words, that's all it pace is a change. I race up, give the best

07:54 - 08:02

Audio shared by Sumedha: The bestie comes, I give a card And he's not... Public!

08:03 - 08:12

Audio shared by Sumedha: Mommy hunts have been It's got You falling back, no plans She's got it better.

08:12 - 08:18

Audio shared by Sumedha: She lies to see our judges.

08:19 - 08:22

Audio shared by Sumedha: This song is gonna be bad.

08:26 - 08:30

Audio shared by Sumedha: She's out to where you want to.

08:35 - 08:38

Audio shared by Sumedha: some happy chill.

08:40 - 08:42

Audio shared by Sumedha: Get the saucy's appointment?

09:08 - 09:11

Audio shared by Sumedha: She's not so pleasant house.

09:11 - 09:12

Audio shared by Sumedha: Very proud.

09:13 - 09:16

Audio shared by Sumedha: And we speak well, he got them right.

09:16 - 09:17

Audio shared by Sumedha: Come.

09:17 - 09:19

Audio shared by Sumedha: The Jacqueline Kindle.

09:19 - 09:24

Audio shared by Sumedha: I think, will that... Gotta heal the shred.

09:24 - 09:28

Audio shared by Sumedha: And these places at which you wasted Desai

09:29 - 09:36

Audio shared by Sumedha: Holy face getting to change, I raise the kids the best!

09:37 - 09:39

Audio shared by Sumedha: I'm like, even now.

09:41 - 09:42

Audio shared by Sumedha: Is that...

09:47 - 09:54

Audio shared by Sumedha: You're falling in life, nobody She's got Let's see...

09:57 - 10:00

Audio shared by Sumedha: I see your jazzies.

10:20 - 10:23

Audio shared by Sumedha: sea of trashies.

10:33 - 10:35

Audio shared by Sumedha: I do, zoo.

10:59 - 11:04

Audio shared by Sumedha: City likes like diamonds blink on tight streets.

11:05 - 11:10

Audio shared by Sumedha: Honking horns play symphonies where chaos meets.

11:11 - 11:20

Audio shared by Sumedha: Like shadows on a neon-painted stage. In this moonlit traffic, let's turn another page

11:21 - 11:25

Audio shared by Sumedha: Morning coffee symphonies rise with the dawn.

11:27 - 11:30

Audio shared by Sumedha: Busy bees in their carpool, just carry on.

11:35 - 11:37

Audio shared by Sumedha: That is still surreal.

11:37 - 11:43

Audio shared by Sumedha: In the smoothie trap, Our secrets, they conceal.

11:56 - 11:57

Audio shared by Sumedha: Sai is true!

11:59 - 12:03

Audio shared by Sumedha: Every life story has to come home.

12:05 - 12:09

Audio shared by Sumedha: Boards scream with faces we don't recognize.

12:10 - 12:14

Audio shared by Sumedha: Every mile... within our...

12:19 - 12:20

Audio shared by Sumedha: We left behind.

12:21 - 12:26

Audio shared by Sumedha: In this moment, traffic Freedom's what we find.

12:26 - 12:31

Audio shared by Sumedha: Silent radios play the songs of yesteryear.

12:32 - 12:34

Audio shared by Sumedha: Windows down the wind.

12:46 - 12:48

Audio shared by Sumedha: Finally!

13:56 - 13:59

Audio shared by Sumedha: Every life story has to fall

14:31 - 14:38

Audio shared by Sumedha: I walk these holes...

14:55 - 15:01

Sumedha: Hello, everyone. Welcome back to your offices. How is everyone doing?

15:06 - 15:16

Sumedha: Hello, hello, good afternoon, good evening, good af- good morning from wherever you are joining in. Warm, warm welcome to your second OFAS session.

15:20 - 15:24

Sumedha: Amazing. I see everybody is very excited for the officers.

15:24 - 15:47

Sumedha: So, without any further ado, we will get started with the office hours. So, we will start with taking the already existing questions, and 10 minutes into the session, we will reopen the Slido again, okay? So, once the Slido is open, you can drop in your new questions, and we will be taking those as well, again, on the basis of popularity.

15:48 - 15:59

Sumedha: All right, with that, again, we have Harshith with us for this office hours. So, welcome back, Harshith, and I will leave the session for the hour to you.

16:01 - 16:08

Harshith Vaddiparthi | Outskill: Yeah, thank you so much, Sumed Mehta, and let me quickly just go ahead and share my screen, and we should get started.

16:08 - 16:10

Harshith Vaddiparthi | Outskill: Yeah, just allow me a second, guys.

16:11 - 16:14

Harshith Vaddiparthi | Outskill: And I shall quickly go ahead and share my screen.

16:19 - 16:22

Harshith Vaddiparthi | Outskill: Perfect. I hope you guys can all see my screen.

16:22 - 16:23

Harshith Vaddiparthi | Outskill: No?

16:23 - 16:32

Harshith Vaddiparthi | Outskill: Let's get started. Oh, GIRA is looking cool. Yeah, I just got a haircut today, just trying this out for the first time. I lost my hair. Yeah.

16:33 - 16:39

Harshith Vaddiparthi | Outskill: Yeah, just trying out a cool, different look. Yeah, yesterday's was a different... it was AI Harshith, this is the real one.

16:41 - 16:41

Harshith Vaddiparthi | Outskill: Okay.

16:42 - 16:49

Harshith Vaddiparthi | Outskill: Alright guys, so let's go ahead and quickly start off with the questions. I think, like Sumedha mentioned, these are, once again, all in popularity.

16:49 - 17:02

Harshith Vaddiparthi | Outskill: So, if you want a question to be answered first, just go ahead and click on the thumbs up icon, it's gonna show up first, okay? Alright, now let's take this one. I recently started a full-time role. My company proposed a shift

17:02 - 17:11

Harshith Vaddiparthi | Outskill: to an AI role focused on automation, CRM project management, employee management, and repetitive tasks, etc.

17:11 - 17:18

Harshith Vaddiparthi | Outskill: I am totally interested, but can I realistically do it without any coding experience, or without any software engineering team?

17:18 - 17:31

Harshith Vaddiparthi | Outskill: Absolutely, absolutely you can. I'm telling you, hands down, you can. There's one thing you just have to master, it's plugins itself. I think we've seen it in our first session, it was called, plugins.

17:31 - 17:45

Harshith Vaddiparthi | Outskill: But underneath that, it's just MCP servers, right? Let me give this to you with a very, very real example, right? So first is, let's say for project management, you are using linear, right? You're using linear application.

17:45 - 18:00

Harshith Vaddiparthi | Outskill: Now, the thing with linear is, you know, it's a project management tool, you have to, like, all the developers, all the developers, project managers, they use this tool to update the tasks and everything. Now, if you do not know how to use this app.

18:00 - 18:06

Harshith Vaddiparthi | Outskill: All you really have to do is look for the MCP. You just have to type in

18:06 - 18:09

Harshith Vaddiparthi | Outskill: Linear MCP. That's all.

18:09 - 18:20

Harshith Vaddiparthi | Outskill: find the linear MCP, now you'll get the entire linear MCP, right? Now, how do you implement this? All you have to do is just go ahead and copy this link.

18:20 - 18:39

Harshith Vaddiparthi | Outskill: Copy that link, put it on your ChatGPT, or put it on your cloud, and just say, connect to linear MCP. Once you do that, it's going to give you a link where you can just go ahead and connect with your account, whatever account, your company account that is. That's one. Now, you guys all might be knowing about Notion.

18:39 - 18:49

Harshith Vaddiparthi | Outskill: Right? Notion. Notion, really cool tool, you know, which is used for a lot of these things, right? Now, again, project management, task management, everything that you have just mentioned here.

18:50 - 18:59

Harshith Vaddiparthi | Outskill: CRM, project management, employee management, and all the repetitive tasks, right? Now, how do you connect this? Once again, search for Notion MCP,

19:00 - 19:08

Harshith Vaddiparthi | Outskill: you'll find, official documentations of Notion, right? Now, Copy that link.

19:08 - 19:10

Harshith Vaddiparthi | Outskill: Let me share my entire screen for this one.

19:11 - 19:12

Harshith Vaddiparthi | Outskill: Copy that link.

19:13 - 19:17

Harshith Vaddiparthi | Outskill: Just go to ChatGPT, or it could just be any, any, anything, right? Just go to ChatGPT.

19:18 - 19:20

Harshith Vaddiparthi | Outskill: Paste that in.

19:21 - 19:24

Harshith Vaddiparthi | Outskill: And just be like, Connect to mine.

19:25 - 19:28

Harshith Vaddiparthi | Outskill: WhatsApp... sorry, WhatsApp, to mine?

19:29 - 19:33

Harshith Vaddiparthi | Outskill: Notion MCP, Just give me the link, too.

19:35 - 19:36

Harshith Vaddiparthi | Outskill: Connect. That's it.

19:37 - 19:39

Harshith Vaddiparthi | Outskill: One second.

19:40 - 19:42

Harshith Vaddiparthi | Outskill: Let me make it medium.

19:43 - 19:45

Harshith Vaddiparthi | Outskill: Hmm, one second, one second.

19:48 - 19:49

Harshith Vaddiparthi | Outskill: Put this in a normal chat.

19:51 - 20:09

Harshith Vaddiparthi | Outskill: That's it. Now, once you do that, your ChatGPT or Claude is gonna look into the entire documentation, and it's gonna connect to the MCP server and give you a link to connect, right? So that's basically how you do it. And once you have it, you can just text on ChatGPT and say, hey.

20:09 - 20:24

Harshith Vaddiparthi | Outskill: Look into the project management, update it. Look into the employee management, update it. Look into the CRM, update it. You can just say, hey, look into my Gmail, check my notes, from my project manager, project manager, and go ahead and update it on my Notion.

20:24 - 20:41

Harshith Vaddiparthi | Outskill: That's it. That's pretty much it on how you gotta do that. I'll have to add in the token, but I think this, I have it already connected in a different chat, so that's why it's not connecting here. But that's basically how you go ahead and, you know, proceed with the connection, right?

20:41 - 20:42

Harshith Vaddiparthi | Outskill: Okay.

20:43 - 20:45

Harshith Vaddiparthi | Outskill: Now, the next one.

20:49 - 20:56

Harshith Vaddiparthi | Outskill: Okay, I want to create a workflow using confidential information of clients. How do I do it locally?

20:57 - 21:03

Harshith Vaddiparthi | Outskill: The best way to actually do it is, if you are using NA10, make sure to install NA10 locally.

21:03 - 21:05

Harshith Vaddiparthi | Outskill: Let's go to any 10.

21:05 - 21:20

Harshith Vaddiparthi | Outskill: And if I click on this button, you know, the GitHub icon, it's gonna show you a complete set of, the entire codebase, right? So what you gotta do right now is just go ahead, copy the entire link, right? Copy this link.

21:20 - 21:29

Harshith Vaddiparthi | Outskill: go back to ChatGPT, Paste it, and simply just be like, Install NA10, locally.

21:29 - 21:36

Harshith Vaddiparthi | Outskill: That's it. The moment you do that, it's gonna go ahead and download the entire codebase on your local computer.

21:36 - 21:51

Harshith Vaddiparthi | Outskill: Right? So that's basically how you go about it. I'm going to stop it because it's gonna consume about 4GB of RAM, and I don't want to get stuck. So that's how you proceed with it, right? That's the workflow side of things. And now, how do the... how do you do the LLM?

21:51 - 22:06

Harshith Vaddiparthi | Outskill: For the LLM, use Olama. I think I mentioned this yesterday as well. Use Ollama. OLAMA, think of it as a Play Store, or like an app store for downloading local models. Go to Models.

22:06 - 22:11

Harshith Vaddiparthi | Outskill: And you're gonna find a lot of them. I would really recommend you start off with

22:11 - 22:14

Harshith Vaddiparthi | Outskill: Gemma 4 by Google.

22:15 - 22:18

Harshith Vaddiparthi | Outskill: That's it. Just copy this link.

22:18 - 22:31

Harshith Vaddiparthi | Outskill: put it on your ChatGPT. Once again, it's good to do it on your ChatGPT app, but I would really recommend do it on your desktop application of ChatGPT and not the website application, right? Do it on the desktop application.

22:31 - 22:36

Harshith Vaddiparthi | Outskill: Paste it, and then simply be like, Look into this.

22:37 - 22:45

Harshith Vaddiparthi | Outskill: And also, check my Max... config, And... recommend?

22:46 - 22:47

Harshith Vaddiparthi | Outskill: What to install.

22:47 - 22:48

Harshith Vaddiparthi | Outskill: That's it.

22:49 - 22:54

Harshith Vaddiparthi | Outskill: See, you don't even have to know what to do. You just have to know where to find the link.

22:54 - 22:57

Harshith Vaddiparthi | Outskill: put it on ChatGPT, and then ask it, and it's gonna do it.

22:59 - 23:17

Harshith Vaddiparthi | Outskill: So that's about it, right? It's gonna look into my Mac's hardware as well, and it's gonna recommend which, as you can see, right? And then recommend a version that should run comfortably. Okay, it figured it out. My Mac is an M3 Pro with 18GB unified memory and a 14-core GPU.

23:18 - 23:29

Harshith Vaddiparthi | Outskill: Olama3 is already installed, storage is so and so, so the model alongside the RAM. Now, as you can see, it gives me a recommendation, right? It gave me a recommendation.

23:29 - 23:32

Harshith Vaddiparthi | Outskill: Right? It said, this, this would work really well.

23:33 - 23:40

Harshith Vaddiparthi | Outskill: Alright, this one would work really well. Now, again, I just have to say Proceed to install.

23:41 - 23:49

Harshith Vaddiparthi | Outskill: That's all. I'm gonna stop it for now, because, again, it'll install, and then you'll eat up some space, but that's all, right? So that's how you do it.

23:50 - 24:01

Harshith Vaddiparthi | Outskill: And this way, all your confidential information will stay in your own server itself, will not be leaving your own computer or your own server. That's the best way of doing it.

24:02 - 24:08

Harshith Vaddiparthi | Outskill: Okay, next one. Can you show us how to use the multi-tool? How to put

24:08 - 24:12

Harshith Vaddiparthi | Outskill: The Cloud ChatGPT source... sources...

24:13 - 24:26

Harshith Vaddiparthi | Outskill: code, it asks, I didn't get you. Multi-tool, do you mean by multi-agent tool? I mean, for example, I could just, you know, go... or let me show you an existing task that has been kind of working.

24:26 - 24:31

Harshith Vaddiparthi | Outskill: Maybe I could just say, hmm, something like, Okay, I could just say...

24:32 - 24:34

Harshith Vaddiparthi | Outskill: Okay, you know what I could just say?

24:34 - 24:45

Harshith Vaddiparthi | Outskill: Deploy, multiple sub-agents, And do a complete...

24:45 - 25:03

Harshith Vaddiparthi | Outskill: review again. I'm just asking it again, because I've already done the work, but I still want to show you an example. If you just do that, you just have to ask, deploy multiple sub-agents. As you can see, it's creating a set of multiple sub-agents, with each of them of their own task.

25:03 - 25:12

Harshith Vaddiparthi | Outskill: And now, it's gonna start working on them, right? So, it's just prompting, guys. You just have to prompt it in the right way, and it's gonna do the work for you.

25:14 - 25:34

Harshith Vaddiparthi | Outskill: Can you share an example from your own experience where AI has been integrated into enterprise workflows or automations involving systems such as ERP, industry-specific business applications, IT infrastructure, or cybersecurity platforms? Practical uses, not sales and marketing? Absolutely, I can definitely share.

25:34 - 25:39

Harshith Vaddiparthi | Outskill: So, let me give you an example of my most recent, recent project that I worked with a client on.

25:39 - 25:46

Harshith Vaddiparthi | Outskill: It's still an ongoing thing. They actually use something called as Salesforce, and something called as CoreBridge.

25:47 - 25:57

Harshith Vaddiparthi | Outskill: CoreBridge.net. I've never, honestly, heard of this tool, and I think it's, like, an enterprise tool. It has a lot of users. I've never heard of this, right?

25:57 - 26:02

Harshith Vaddiparthi | Outskill: Again, so if I want to make use of this, how would I go about it?

26:02 - 26:06

Harshith Vaddiparthi | Outskill: First thing what I do is I would go ahead and ask my ChatGPT

26:06 - 26:18

Harshith Vaddiparthi | Outskill: to do a complete run-through of the entire platform of CoreBridge, including its features, pricing, partners, blogs, resources, everything.

26:18 - 26:28

Harshith Vaddiparthi | Outskill: And I'll create a resource for myself. That's one. Now, let's say another application, enterprise application, which a lot of people use is, of course, QuickBooks for accounting and finance, right?

26:29 - 26:48

Harshith Vaddiparthi | Outskill: If that's something that they want to do, I would go ahead and find all the integrations, all the APIs that are possible with QuickBooks. The same thing with Outlook as well. And I think the same thing with NetSuite as well, right? NetSuite and all of these, you know, enterprise-grade applications.

26:48 - 27:03

Harshith Vaddiparthi | Outskill: There is always some kind of integration that you can use. So find those documentation, find those integrations, and then give it to your chat GPT and ask it to build some kind of a platform out of it, right? Okay.

27:04 - 27:10

Harshith Vaddiparthi | Outskill: Let me... let me give you an example. I do have an example right now, but it just has confidential data.

27:10 - 27:14

Harshith Vaddiparthi | Outskill: Let me see what I can kind of, you know, share with you.

27:17 - 27:20

Harshith Vaddiparthi | Outskill: Let me see what I can kind of share with you.

27:26 - 27:42

Harshith Vaddiparthi | Outskill: Yeah, I'll try to, I'll try to, you know, maybe share you... share you kind of, like, an image of data, but what I mean by this is it's definitely possible to connect your ERP solutions, NetSuite, NetSuite, you know, QuickBooks, all of these platforms.

27:42 - 27:55

Harshith Vaddiparthi | Outskill: find the integrations, connect them with your ChatGPT. I think now, I think very recently, Salesforce has also just built out an integration with the cloud as well. It's still in beta phase, but that's also something you can use.

27:57 - 28:00

Harshith Vaddiparthi | Outskill: Okay, someone mentioned get multi.

28:01 - 28:03

Harshith Vaddiparthi | Outskill: get multi-AI.

28:03 - 28:04

Harshith Vaddiparthi | Outskill: Okay.

28:04 - 28:09

Harshith Vaddiparthi | Outskill: Yeah, I think Get Multi, guys, I think, one prompt, four ways to...

28:09 - 28:32

Harshith Vaddiparthi | Outskill: So the best way to actually do this right now, so think of getMulti as, you give one single prompt, and you're running this through multiple LLMs, and seeing which is giving you the best answer, and then you pick that, right? So that's how you do it. You can try to proceed with this, but again, one thing to know about, it's going to be slightly token-intensive.

28:32 - 28:43

Harshith Vaddiparthi | Outskill: Because the same prompt, you're running it through complete different models, so it's gonna... it's gonna be a little token-intensive. You can try to do that, or you can just use the same...

28:43 - 28:49

Harshith Vaddiparthi | Outskill: Model with, let's say, Okay, by the way, this is, different agents, guys. Do you see that?

28:50 - 29:01

Harshith Vaddiparthi | Outskill: It's so funny, it named... guys, do you see the names of the models? One says Einstein, and the other one is called Chandra Shikar. I have no idea how it even came up with that name.

29:02 - 29:10

Harshith Vaddiparthi | Outskill: it just came up with that name, guys. So, there are different multiple agents working. So, yeah, if you want to try this.

29:10 - 29:15

Harshith Vaddiparthi | Outskill: you can... you can do that, but in that case, you have to use GPT-6 Ultra.

29:15 - 29:22

Harshith Vaddiparthi | Outskill: on, sorry, GPT-6 Astra on Ultra mode. This way, it can just go ahead and deploy multiple agents.

29:22 - 29:35

Harshith Vaddiparthi | Outskill: So, kind of like, you know, trying out GetMulti, but you can see whichever gives you the best output, and then you can just use that. One prompt, multiple answers, or one prompt with a very powerful model.

29:35 - 29:40

Harshith Vaddiparthi | Outskill: that deploys multiple agents. So, your call on that one, it depends on the use case.

29:42 - 29:59

Harshith Vaddiparthi | Outskill: Okay, my organization only allows me to use Copilot as it is from Microsoft, and we deal with confidential data. They have given premium license for the same. I was doing... I was told during registration that Copilot will be covered as well, but I don't see that in the 14-day agenda.

29:59 - 30:10

Harshith Vaddiparthi | Outskill: That's very important for me, please advise. Okay, regarding the course structure, I would please recommend, please go ahead and, you know, maybe write an email to support at

30:11 - 30:22

Harshith Vaddiparthi | Outskill: better on the core structure and everything. But if you just want pointers on how to use the Copilot, Copilot is good. Let me... let me show my...

30:23 - 30:24

Harshith Vaddiparthi | Outskill: Outlook.

30:25 - 30:27

Harshith Vaddiparthi | Outskill: I think I should be having Outlook.

30:31 - 30:46

Harshith Vaddiparthi | Outskill: Yeah, I think... I think... let me see if I have an outlook. Yeah, I don't have... I don't have it on this computer, guys. But to give you an example of how Outlook works, it's basically like ChatGPT itself, but very, very native to the entire Microsoft suite.

30:46 - 31:02

Harshith Vaddiparthi | Outskill: So I would say, whatever prompting methodologies you're learning here on GPT, on Claude, it's all gonna work the same on Outlook as well. And let me give you another way of understanding this. Outlook

31:02 - 31:14

Harshith Vaddiparthi | Outskill: Sorry, another thing, okay, let me actually make this even better, and try to make you, you know, understand, right? So right now, you are actually talking about how do you proceed with

31:15 - 31:17

Harshith Vaddiparthi | Outskill: MS Core?

31:17 - 31:19

Harshith Vaddiparthi | Outskill: pilot, right? That's your question.

31:19 - 31:27

Harshith Vaddiparthi | Outskill: But what I'm trying to say is, the same methodologies that you are learning with Claude and...

31:27 - 31:38

Harshith Vaddiparthi | Outskill: ChatGPT will apply for Outlook... sorry, Outlook... how do I keep saying Outlook? Yeah, it's MS Copilot. I'm sorry, I'm just, you know, having a fluid and slip.

31:38 - 31:53

Harshith Vaddiparthi | Outskill: But what I mean is, the same methodologies you are doing for ChatGPT and Claude will also be applied for MS Copilot as well, right? It's the same thing, it's literally the same thing, and if I have to give you another insight.

31:54 - 31:59

Harshith Vaddiparthi | Outskill: You know MS Copilot, right? MS Copilot is by Microsoft.

32:02 - 32:03

Harshith Vaddiparthi | Outskill: Microsoft, right?

32:04 - 32:05

Harshith Vaddiparthi | Outskill: Now.

32:05 - 32:11

Harshith Vaddiparthi | Outskill: Let me give you this one insight, which is gonna make you very, very, you know, very clear on this.

32:11 - 32:18

Harshith Vaddiparthi | Outskill: The best part about MS Copilot is that it's actually running all the GPT models itself.

32:18 - 32:35

Harshith Vaddiparthi | Outskill: So, underneath it, it's running the GPT models itself, because Microsoft has something called as Azure, right? Microsoft Azure, their own cloud provider. Now, who is the cloud provider for ChatGPT, OpenAI?

32:35 - 32:40

Harshith Vaddiparthi | Outskill: it's literally Azure itself. So, they are using

32:41 - 32:46

Harshith Vaddiparthi | Outskill: the same models, right? They are using the same models. Let me... let me do that again.

32:47 - 32:50

Harshith Vaddiparthi | Outskill: I'll just make it way more easy for you to understand.

32:50 - 32:56

Harshith Vaddiparthi | Outskill: The same providers it's right here. Does that make sense? I hope... I hope this makes sense, right?

32:57 - 33:15

Harshith Vaddiparthi | Outskill: I hope this, you know, this diagram makes sense. So the provider for Azure is also ChatGPT, so if you learn any of these models, it's all basically the same, because it's all the LLM itself. So if you understand the prompting methodologies, you can use it in any of the tools.

33:15 - 33:28

Harshith Vaddiparthi | Outskill: And one good thing with MS Copilot, it already comes, you know, with all the Microsoft 365 integration. For GPT and Cloud, you'll have to add it. This is just native to it. That's the only difference. That's all.

33:29 - 33:39

Harshith Vaddiparthi | Outskill: Okay, so I hope that, you know, diagram makes sense. Let me see if I can add it as a screenshot in the chat for you guys to take a look.

33:40 - 33:42

Harshith Vaddiparthi | Outskill: Okay, just send it, guys.

33:44 - 33:59

Harshith Vaddiparthi | Outskill: Okay, can you explain how the advertised 100-plus training hours are delivered, the breakdown of live teaching, practical work, and recorded? Okay, any, anything, any course questions, guys? I'm sorry, I would not be able to answer, because I'm not actually sure about the...

33:59 - 34:09

Harshith Vaddiparthi | Outskill: these questions, right? Because I am a mentor, and I would be able to help you with AI-related questions. Any AI-related questions, let me know, I could help you out. But course.

34:09 - 34:13

Harshith Vaddiparthi | Outskill: Please, please try to support at

34:13 - 34:21

Harshith Vaddiparthi | Outskill: Outskill.com, because they'll just be the best, folks to, you know, help you out, because, yeah, that's the best, the best POC, I would say.

34:21 - 34:38

Harshith Vaddiparthi | Outskill: Okay, I'm automating text-to-image-to-video workflow with Grogbots. A creative designer, prompt bot, review bot, and then human review. I'm getting results, but not 100%. What can I improve?

34:39 - 34:47

Harshith Vaddiparthi | Outskill: Okay, so this one, how are you doing it? Number one, what are you using for it? Are you using GrogBot? You mean...

34:49 - 34:53

Harshith Vaddiparthi | Outskill: Grog bought the app, Where is it? Let's see.

34:55 - 35:01

Harshith Vaddiparthi | Outskill: Are you using this one? Okay. If you're using this one, if you're using Grogbot in this case.

35:01 - 35:08

Harshith Vaddiparthi | Outskill: The best way to proceed with this is try to create a very simple front-end dashboard.

35:08 - 35:24

Harshith Vaddiparthi | Outskill: Right? Create a very, very simple front-end dashboard, where you can see the flow of these agents, right? Different agents doing the work, but if you just create a very simple front-end dashboard, you'll clearly see where the agent is actually working.

35:24 - 35:43

Harshith Vaddiparthi | Outskill: where it's thinking, and where the gap lies. Once you have that understanding, you can go ahead and prompt better and build out better integrations, right? So it's all about integrations and prompting, I would say, in this case, right? And the other one is,

35:43 - 35:44

Harshith Vaddiparthi | Outskill: Let's see what I can show you.

35:45 - 35:49

Harshith Vaddiparthi | Outskill: So I have my own, kind of, like, a studio.

35:49 - 35:52

Harshith Vaddiparthi | Outskill: Where... I forgot the password for this.

35:53 - 35:55

Harshith Vaddiparthi | Outskill: I hope I have it.

35:57 - 36:01

Harshith Vaddiparthi | Outskill: Yeah, it looks like I forgot the password for my own studio, guys.

36:01 - 36:16

Harshith Vaddiparthi | Outskill: or let me... let me show you my own newsletters to do, right? Look at this. So this is where I, you know, I write... I like, I write weekly newsletters, right, on my own, I just write my own newsletter, and the best way

36:16 - 36:25

Harshith Vaddiparthi | Outskill: to understand where the agent is making a mistake, or what the improvements are, is by look... is by creating your very own little dashboard. Again.

36:25 - 36:33

Harshith Vaddiparthi | Outskill: This dashboard is not something that's publicly available, it's just my very own dashboard I built out, because I want to see the number of subscribers I have.

36:33 - 36:40

Harshith Vaddiparthi | Outskill: who are... the number of people who are opening it, and the issues, meaning, you know, the letters that I'm sending and all of that.

36:41 - 36:54

Harshith Vaddiparthi | Outskill: The best part when it comes to your own dashboard, everything on the left side that you're seeing, all the analytics and everything, you can make even more deeper integrations with your own tools and get better insights.

36:54 - 36:59

Harshith Vaddiparthi | Outskill: So in this case, if you're doing text-to-image to video.

37:00 - 37:12

Harshith Vaddiparthi | Outskill: In that case, go ahead and build out, like, a dashboard with a very clean flow, and the agent updates its notes on that. That way, you can just make better informed decisions of what's happening.

37:15 - 37:16

Harshith Vaddiparthi | Outskill: Okay.

37:18 - 37:24

Harshith Vaddiparthi | Outskill: Yeah, again, I'm gonna skip this one, guys. It's course-related, so please proceed with the...

37:24 - 37:28

Harshith Vaddiparthi | Outskill: It's, proceed to write an email to support at Outskill.com.

37:29 - 37:42

Harshith Vaddiparthi | Outskill: In yesterday's optional assignment, Step 4A asked to add the system prompt, but the workflow wouldn't run because it said it was missing the user prompt. What am I missing? Okay.

37:43 - 37:47

Harshith Vaddiparthi | Outskill: So, let me kind of see what's happening right there.

37:48 - 37:51

Harshith Vaddiparthi | Outskill: So, to give you an understanding, just,

37:53 - 38:01

Harshith Vaddiparthi | Outskill: Okay, I think I lost my workspace there, one second. Okay, let me quickly, quickly try to help you understand this part, okay?

38:01 - 38:04

Harshith Vaddiparthi | Outskill: So, let me just go to XCarry Draw...

38:05 - 38:20

Harshith Vaddiparthi | Outskill: Yes. So, when you are working with the agent, right, when you're working with the agent... now, first question, is this, missing user prompt, system prompt? Okay, so I'm guessing this is the agent, chat, right?

38:20 - 38:27

Harshith Vaddiparthi | Outskill: In that case, In that case, once you open your anth and node, you're gonna have

38:27 - 38:31

Harshith Vaddiparthi | Outskill: An option right here, which is for... which is like a drop-down.

38:32 - 38:36

Harshith Vaddiparthi | Outskill: Which gives you all the pointers about system prompt, user prompt, and everything.

38:36 - 38:41

Harshith Vaddiparthi | Outskill: Sometimes what happens, it's just like a UI thing. If you haven't clicked on it properly.

38:41 - 38:46

Harshith Vaddiparthi | Outskill: It doesn't open, and even if you give you a prompt, it doesn't register.

38:46 - 39:06

Harshith Vaddiparthi | Outskill: So, that's one way to troubleshoot it. Just properly open that, give your prompt in. You have to properly give your prompt in, and then just make sure you save your workflow as well. Because if you don't save your NHN workflow, it's actually not gonna

register it, and even if you've added it, it's not gonna, you know, it's not gonna see the prompt. So please try that out.

39:07 - 39:15

Harshith Vaddiparthi | Outskill: Okay, the next one. Could you advise how to automate the Outlook 365

39:15 - 39:26

Harshith Vaddiparthi | Outskill: 365 by replying the email and put it in draft. Yes, I can give you two ways to do it. Number one, it's by proceeding with the actual

39:26 - 39:30

Harshith Vaddiparthi | Outskill: node itself. If you are... if you are doing this on NA10,

39:31 - 39:44

Harshith Vaddiparthi | Outskill: to the NATN node, and in the NH10 node, give it access to create a draft, write an email, send email. So you have to give it all the access, only then it will be able to do it.

39:44 - 39:51

Harshith Vaddiparthi | Outskill: That's one way. If you want a much more easier way to do it, I just go to Cloud, I just go ahead and open Cloud.

39:53 - 39:56

Harshith Vaddiparthi | Outskill: An open claw, guys, just a second.

39:59 - 40:00

Harshith Vaddiparthi | Outskill: Yes.

40:00 - 40:06

Harshith Vaddiparthi | Outskill: Yeah. Now, as you can see, Claude, and... where are my connectors?

40:09 - 40:12

Harshith Vaddiparthi | Outskill: Yeah, my connectors and my plugins.

40:12 - 40:13

Harshith Vaddiparthi | Outskill: Sure.

40:16 - 40:17

Harshith Vaddiparthi | Outskill: Outlook? Yeah.

40:17 - 40:30

Harshith Vaddiparthi | Outskill: So your entire Microsoft 365 would be connected with one single plugin itself. So just connect to Cloud, and you can see access to SharePoint, OneDrive, Outlook, and Teams directly in Cloud itself.

40:30 - 40:40

Harshith Vaddiparthi | Outskill: Just go ahead and connect this, and that way you can just reply to emails and do all of that. If you just want me to give you an example of how I do that on a daily basis.

40:40 - 40:44

Harshith Vaddiparthi | Outskill: Let me just show this to you right now, okay? I would just say...

40:44 - 40:46

Harshith Vaddiparthi | Outskill: Let me make this light.

40:47 - 40:53

Harshith Vaddiparthi | Outskill: Look into my... Hi at Harshith.com. Email.

40:55 - 41:06

Harshith Vaddiparthi | Outskill: And tell me if there is... And tell... and tell me, the latest email Received. That's all.

41:07 - 41:11

Harshith Vaddiparthi | Outskill: Why does it say permission mode unavailable? Is something wrong?

41:12 - 41:13

Harshith Vaddiparthi | Outskill: Yep.

41:16 - 41:31

Harshith Vaddiparthi | Outskill: So yeah, that's all. I just have to do that, it's just gonna go ahead and, yeah, check my, Gmail. So in this case, I'm using Gmail. It's gonna use that, it's gonna get my inbox and tell me if I... if there's something that I have to reply to, right? That's... that's one way I do it.

41:32 - 41:34

Harshith Vaddiparthi | Outskill: I'll try to show you another way,

41:35 - 41:37

Harshith Vaddiparthi | Outskill: This is a bit of a...

41:38 - 41:44

Harshith Vaddiparthi | Outskill: I just pushed this a little too much. Let me try to load that, if that's possible.

41:44 - 41:54

Harshith Vaddiparthi | Outskill: once it loads, I can try to share that with you. But I basically, again, it's all different LLMs, guys, it's all about giving various different connections. Yeah, that's all, as you can see.

41:54 - 42:13

Harshith Vaddiparthi | Outskill: I just got a, you know, some marketing email, I guess. Yeah, just some kind of a marketing email I just received. So that's basically how you do it. If you want to reply to it, if you want to draft an email, just say, hey, draft an email to so-and-so, it's gonna do that. So all about connectors giving access to your LLM.

42:14 - 42:20

Harshith Vaddiparthi | Outskill: Can I partner up with AI experts who delivered AI-powered solutions to businesses in the US?

42:20 - 42:41

Harshith Vaddiparthi | Outskill: I'm working with small, medium businesses in New York. Yes, absolutely. You can definitely do that. That's basically the business I am in as well. So, as an AI expert, I partner up with different businesses and solutions and build out, like, custom dashboards and solutions for them. You can find a lot of, you know, AI consultants and AI experts as well. You can do so, yeah.

42:42 - 42:50

Harshith Vaddiparthi | Outskill: Okay, I meant get multi-tool, how to install ChatGPT source code into it.

42:51 - 42:53

Harshith Vaddiparthi | Outskill: To run multiple LLMs, okay.

42:53 - 43:09

Harshith Vaddiparthi | Outskill: Got it. So GetMulti is a tool by itself. You'll not be able to install Claude or ChatGPT source code, because the source code of Claude and ChatGPT, it's not open. It's, it's not out there, it's, it's...

43:09 - 43:14

Harshith Vaddiparthi | Outskill: It's closed source, so you'll not be able to upload any source code to it.

43:14 - 43:23

Harshith Vaddiparthi | Outskill: you can... all you can do is just go ahead and add in different LLMs. You know what, let's... let's just go ahead and give it a try, honestly. Yeah. Okay.

43:23 - 43:24

Harshith Vaddiparthi | Outskill: Let me log in.

43:27 - 43:29

Harshith Vaddiparthi | Outskill: Let me log in...

43:31 - 43:45

Harshith Vaddiparthi | Outskill: So think of it as a council, right? As a council of different L&Ms, with the same prompt, how do they perform, the kind of responses they give. So that is basically what GetMulti does, right? That's the whole purpose of GetMulti.

43:46 - 43:47

Harshith Vaddiparthi | Outskill: Alright.

43:47 - 43:55

Harshith Vaddiparthi | Outskill: Now, yeah, as you can see, answer with Luna, let's say, HI4, GLM,

43:56 - 44:09

Harshith Vaddiparthi | Outskill: yeah, multiple of them you can just use, just select it. You can just ask that, or let's say if I go to the council, okay, Claude is a judge, and GPT-5.6, all of these are right here.

44:09 - 44:28

Harshith Vaddiparthi | Outskill: I would honestly... yeah, let's just keep it highest quality output, and if you want Grok as well, Mistral, all of that. I mean, it's a very simple application,

guys. You can just build your very own application very easily. I mean, I could just prompt my agent right now and just say.

44:28 - 44:35

Harshith Vaddiparthi | Outskill: I wanted to go ahead and build out a very simple Council of Experts dashboard.

44:35 - 44:45

Harshith Vaddiparthi | Outskill: just go ahead and integrate OpenRouter, with which I can just integrate multiple LLMs, and there should be one council. So just create that for me.

44:46 - 44:51

Harshith Vaddiparthi | Outskill: Yeah, I'll give the prompt, and we'll come back and let's see how it's working.

44:51 - 44:59

Harshith Vaddiparthi | Outskill: take, you can take inspiration from getmulti.ai, G-E-T-M-U-L-T-I dot AI.

45:00 - 45:01

Harshith Vaddiparthi | Outskill: But keep it very, very simple.

45:04 - 45:10

Harshith Vaddiparthi | Outskill: I... I lost my... this thing, take inspo.

45:11 - 45:16

Harshith Vaddiparthi | Outskill: from getmulti.ai, keep it simple. That's all.

45:17 - 45:19

Harshith Vaddiparthi | Outskill: Why does it keep saying this?

45:22 - 45:22

Harshith Vaddiparthi | Outskill: Yup.

45:22 - 45:32

Harshith Vaddiparthi | Outskill: Yeah, we'll come back and we'll see how it looks like. But honestly, the way it works is multiple LLMs underneath, one prompt, and then it just gives you, you know, what other models are thinking.

45:32 - 45:43

Harshith Vaddiparthi | Outskill: But I would say it's definitely a good tool, but you can, you know, test it out with a lot of them also. But yeah, that's something you can try. But you can't put in any source code.

45:44 - 46:00

Harshith Vaddiparthi | Outskill: You can't put in source code of the LLMs, but if you are talking about adding GitHub or, like, a different source code, looks like GetMulti does not have those integrations for GitHub, so it honestly doesn't have any kind of, you know, GitHub integration.

46:00 - 46:09

Harshith Vaddiparthi | Outskill: So, you really can't ask that here. You just have to copy-paste or add in some kind of a prompt. It's more of a prompting kind of a tool.

46:09 - 46:18

Harshith Vaddiparthi | Outskill: It's not really, like, a tool that looks into your codebase, but that's something you might have to build custom. I mean, let me just ask it right now here.

46:18 - 46:23

Harshith Vaddiparthi | Outskill: this is great. Make it, like, a GitHub.

46:23 - 46:25

Harshith Vaddiparthi | Outskill: Connected.

46:25 - 46:34

Harshith Vaddiparthi | Outskill: Dashboard, Where it can look into my... code base.

46:34 - 46:38

Harshith Vaddiparthi | Outskill: That's all. You can just build out, like, a tool like this, so it should be easy to do that.

46:40 - 46:44

Harshith Vaddiparthi | Outskill: Okay, the next one... okay, Kumar again, nice to see you.

46:44 - 47:04

Harshith Vaddiparthi | Outskill: We were taught how to create a skill in ChatGPT using tips of setting it up on Cloud. How do I find and access this skill later? Or does ChatGPT know about me and use it automatically? Number one, it would be able to know about you automatically, it just knows you, it'll have its own memory.

47:04 - 47:08

Harshith Vaddiparthi | Outskill: If you... if it, you know, anytime forgets it, don't worry.

47:08 - 47:11

Harshith Vaddiparthi | Outskill: There's something called... let me do this, okay?

47:11 - 47:15

Harshith Vaddiparthi | Outskill: If I do tag it, and then just do skill.

47:15 - 47:20

Harshith Vaddiparthi | Outskill: Okay, maybe it doesn't have it here. Let me check here.

47:21 - 47:29

Harshith Vaddiparthi | Outskill: Or let me just ask it, do you have the skill creator, Still, let me just ask.

47:30 - 47:33

Harshith Vaddiparthi | Outskill: it should be having it. Let me ask the same prompt.

47:33 - 47:47

Harshith Vaddiparthi | Outskill: Yeah, as you can see, yes, Anthropic has its own skill creator skill. So whatever skill that you have seen on GitHub, it automatically has it. So don't have to worry, you can just go ahead and ask it to create a skill, it'll automatically do that.

47:47 - 47:50

Harshith Vaddiparthi | Outskill: Same thing with ChatGPT as well, let me ask that.

47:51 - 47:59

Harshith Vaddiparthi | Outskill: Do you have the skill creator skill? And it does, because I have seen it, if I just tag it and do skill. Do you see that?

47:59 - 48:02

Harshith Vaddiparthi | Outskill: Skill, create a skill. It already has it.

48:02 - 48:11

Harshith Vaddiparthi | Outskill: So, don't have to worry about it. Just focus on what skill you want to create, that's it. ChatGPT and Cloud, it'll handle the rest.

48:12 - 48:25

Harshith Vaddiparthi | Outskill: How does one add GitHub code to Claude or chat GPT? Okay, so you can't add GitHub codes in that way. The way you do this is very simple, okay?

48:26 - 48:28

Harshith Vaddiparthi | Outskill: GitHub, right? You create a GitHub account.

48:30 - 48:35

Harshith Vaddiparthi | Outskill: And you... okay, as you can see, I have all my multiple GitHub repositories.

48:35 - 48:40

Harshith Vaddiparthi | Outskill: Right? The way you connect it is using connectors.

48:40 - 48:50

Harshith Vaddiparthi | Outskill: So let me just go back to Claude, click on Customize, Open Connectors, and here, let me search for...

48:51 - 48:52

Harshith Vaddiparthi | Outskill: GitHub.

48:53 - 48:55

Harshith Vaddiparthi | Outskill: Whereas GitHub, not here.

48:57 - 49:00

Harshith Vaddiparthi | Outskill: Let me check.

49:01 - 49:03

Harshith Vaddiparthi | Outskill: Does it have GitHub?

49:04 - 49:22

Harshith Vaddiparthi | Outskill: Okay, looks like it doesn't, natively... it doesn't natively have a GitHub, but does that mean you can't connect? No. You can still connect it. Let me show this to you how, okay? Now you have... I have my GitHub, and I want to go ahead and, I want to...

49:22 - 49:30

Harshith Vaddiparthi | Outskill: KOMA, that's so funny. Ugh. The Harshith looks different today, what's the tutor's name? Okay, yesterday's was AI, KOMA. This is the real Harshith.

49:30 - 49:37

Harshith Vaddiparthi | Outskill: Okay, so I just changed my avatar. I just prompted to change my avatar, so that's what happened.

49:37 - 49:52

Harshith Vaddiparthi | Outskill: Okay, now, to show you guys how to connect your GitHub to Cloud, guys, one thing you have to remember is something called as CLI. It's called Command Line Interface. Again, don't stress about it, don't have to worry about it. Very easy.

49:52 - 49:57

Harshith Vaddiparthi | Outskill: You just go to Claude Code, or, you know, Claude or ChatGPT, and then say.

49:58 - 50:10

Harshith Vaddiparthi | Outskill: I want to connect my GitHub to you, use GitHub MCP, Or... CLI.

50:10 - 50:11

Harshith Vaddiparthi | Outskill: to connect.

50:11 - 50:23

Harshith Vaddiparthi | Outskill: That's it. Just say that. If it understands how to do that, it's just gonna automatically do it. It's gonna set... it's gonna look into the, already available tools on my machines. As you can see.

50:23 - 50:29

Harshith Vaddiparthi | Outskill: This case, let me do always allow, and just make it bypass permissions, because I don't want it to, you know, keep asking.

50:29 - 50:46

Harshith Vaddiparthi | Outskill: Okay, it's gonna look into all the, you know, MCPs, or the plugins that are currently available. If there's something that's available, it's gonna do that. If not, it'll just figure out a way to connect, guys, right? Do you see that? It's just figuring out its own way to go ahead and connect.

50:46 - 51:02

Harshith Vaddiparthi | Outskill: Of course, in this case, my GitHub is already connected, so I have connected it using the GitHub CLI, and as you can see, GitHub CLI fully works, 143 repositories accessible, now it's checking MCP as well. Anything is fine.

51:02 - 51:06

Harshith Vaddiparthi | Outskill: These are two different ways to connect it, but,

51:06 - 51:24

Harshith Vaddiparthi | Outskill: Whatever it is, you just have to tell your Claude to connect to it, right? So that's the answer to your question. Just go ahead and ask Claude. You can just say, hey, look into my, configuration, and recommend what is the best one to use, MCP or CLI.

51:24 - 51:39

Harshith Vaddiparthi | Outskill: I would recommend CLI because it's very easy, or plugin using GitHub is also very easy, but Plot, for some reason, didn't have the plugin, but you can still connect it, right? You can still connect it. And let me give you an example, let me just give you an example.

51:39 - 51:50

Harshith Vaddiparthi | Outskill: Okay, using my GitHub CLI, which is already connected, can you tell me what is the most recent repository that I have just worked on?

51:52 - 51:55

Harshith Vaddiparthi | Outskill: So I'm just giving you an example, right?

51:57 - 52:04

Harshith Vaddiparthi | Outskill: if I just do that, of course, I think the most latest one should be this one, my website itself, about 1 hour ago.

52:04 - 52:19

Harshith Vaddiparthi | Outskill: So it should be able to do that, right, as you can see. Okay, first it's checking the access and everything, but this prompt, it's gonna give me the answer as well, right? So that's basically how you do it. It's listing out the repositories, it's finding the activities and everything.

52:19 - 52:27

Harshith Vaddiparthi | Outskill: So, by now, I hope you guys do understand the power of LLMs comes from the connected tools.

52:27 - 52:33

Harshith Vaddiparthi | Outskill: Okay, once again, if I quickly, quickly have to tell you what a CLI is.

52:33 - 52:36

Harshith Vaddiparthi | Outskill: CLI. Guys, it just stands for...

52:38 - 52:54

Harshith Vaddiparthi | Outskill: command line interface. Don't really have to think it's a technical term, guys, it's a very, very simple way of, you know, doing it. It's just, every tool has its own terminal version, meaning

52:54 - 53:08

Harshith Vaddiparthi | Outskill: its own computer version. So computers, you know, understand this... this version easier, so that's the only thing that we're using. That's one. Or you can just use the MCP.

53:08 - 53:10

Harshith Vaddiparthi | Outskill: Model Context Protocol.

53:18 - 53:22

Harshith Vaddiparthi | Outskill: Which is basically... Plugin.

53:22 - 53:23

Harshith Vaddiparthi | Outskill: slash connectors.

53:25 - 53:32

Harshith Vaddiparthi | Outskill: Slash connectors. So you can use any of these ways to connect your LLMs, right, once again. These are ways

53:32 - 53:35

Harshith Vaddiparthi | Outskill: to connect to your LLM.

53:37 - 53:42

Harshith Vaddiparthi | Outskill: Let me put that again here. Guys, I hope you're able to understand this, right? I hope that's, you know, clear.

53:43 - 53:48

Harshith Vaddiparthi | Outskill: Maybe give me a thumbs up in the chat, guys, you know, just type in a yes in the chat, if this is clear.

53:49 - 53:50

Harshith Vaddiparthi | Outskill: That's... it.

53:51 - 53:53

Harshith Vaddiparthi | Outskill: This is basically what it is.

53:53 - 53:56

Harshith Vaddiparthi | Outskill: So how you connect your LLM?

53:56 - 53:57

Harshith Vaddiparthi | Outskill: Okay.

53:58 - 54:15

Harshith Vaddiparthi | Outskill: Perfect, yeah. The next one is Grogbot. Okay, Zahir, nice to see you again. Is Grogbot worth trying? I'd love to get your insight on it, especially how it compares with Cloud and ChatGPT. What do you think Grogbot does better or differently?

54:15 - 54:21

Harshith Vaddiparthi | Outskill: And is there a good reason to add it to the AI tools I'm already using? So, Zahir, let me be very honest.

54:21 - 54:25

Harshith Vaddiparthi | Outskill: I've tried it once, and then I didn't, you know, try it late after that.

54:25 - 54:30

Harshith Vaddiparthi | Outskill: I would say it's really good. One thing I can tell you about Grok is that

54:31 - 54:33

Harshith Vaddiparthi | Outskill: It's very, very fast.

54:34 - 54:41

Harshith Vaddiparthi | Outskill: Grogbot is very, very fast, because, one thing that it uses

54:41 - 54:54

Harshith Vaddiparthi | Outskill: Groundport is very fast, right? It can do the computation very, very fast. In a technical way... again, sorry guys, not using the word technical, not technical. Guys, I'm a non-technical guy, I can't write a single line of code.

54:54 - 55:01

Harshith Vaddiparthi | Outskill: So, yeah, I'm just trying to use the word technical to sound cool, but what I mean by Grogbot.

55:02 - 55:05

Harshith Vaddiparthi | Outskill: the best thing about Grogbot is that

55:06 - 55:10

Harshith Vaddiparthi | Outskill: It uses something called as... let me, let me put that here.

55:11 - 55:13

Harshith Vaddiparthi | Outskill: use something called as MOE.

55:13 - 55:18

Harshith Vaddiparthi | Outskill: And that stands for... Mixture of experts.

55:19 - 55:20

Harshith Vaddiparthi | Outskill: Make sure off.

55:21 - 55:30

Harshith Vaddiparthi | Outskill: Experts. So what does that even mean, right? Let me... let me make it very, very clear, you'll just understand it the best way, right? It's a mixture of expert.

55:30 - 55:42

Harshith Vaddiparthi | Outskill: So, a large language model is this big, right? It's, like, it's very, very big, and the modern two, you know, modern ones are, like, let's say, 2 trillion parameters.

55:42 - 55:52

Harshith Vaddiparthi | Outskill: Right? But GrogBot, what it does best is basically a mixture of expert, right? That means, even if it's 2 trillion parameters.

55:52 - 55:57

Harshith Vaddiparthi | Outskill: Maybe, like, a small portion of it might be

55:57 - 56:06

Harshith Vaddiparthi | Outskill: really good in, really good in, coding, or really good in marketing, right? So, if we give our prompt.

56:06 - 56:11

Harshith Vaddiparthi | Outskill: It's only gonna be using this part of the LLM,

56:11 - 56:19

Harshith Vaddiparthi | Outskill: So it's not doing the entire computation. It's doing only this part, you know, only this tiny, tiny part of the computation.

56:20 - 56:37

Harshith Vaddiparthi | Outskill: So it just gives you very quick answers. So that's the best reason you can use... you can try out grogboards Zahir. That's what I would recommend. But in terms of the UI, not really a big fan. I am just, like, a codex person, you can see.

56:37 - 56:44

Harshith Vaddiparthi | Outskill: all my work is done on Codex, or ChatGPT, basically. I just use ChatGPT. This is basically ChatGPT, guys.

56:44 - 56:46

Harshith Vaddiparthi | Outskill: is ChatGPT itself.

56:46 - 56:50

Harshith Vaddiparthi | Outskill: I just used ChatGPT ODA. Did I archive something? Sure.

56:51 - 56:59

Harshith Vaddiparthi | Outskill: Yeah, so I just use ChatGPT, you know, the best way to do it, I feel. But yeah, Grok has a mixture of expert, very, very fast to do the work.

57:01 - 57:15

Harshith Vaddiparthi | Outskill: Okay, okay, another question. I'm working with a school to put their policies into Notebook LM. Teachers can query it. Rather than uploading all files, can they use subfolders for sources of information?

57:15 - 57:26

Harshith Vaddiparthi | Outskill: Notebook LM actually doesn't offer subfolders, we just have to create a completely new folder for... new project for each, so no subfolders as such.

57:27 - 57:35

Harshith Vaddiparthi | Outskill: But I would say, even if it's that... I mean, so what's the constraint? Is it that, you know, there's a lot of policies that you want to upload? In that case, I would say?

57:35 - 57:41

Harshith Vaddiparthi | Outskill: compress your files, and then upload them in Notebook LM, and

57:41 - 57:45

Harshith Vaddiparthi | Outskill: the teachers would still be able to, you know, access it. So that's something I would recommend.

57:47 - 57:57

Harshith Vaddiparthi | Outskill: Okay, to carry on from my previous query, should the school update their policies separately and bring to Notebook LM, or...

57:57 - 58:09

Harshith Vaddiparthi | Outskill: I can create an NA10 automation that will enable me to bring the updated policy to their central notebook automatically. Unfortunately, Notebook LM does not have an integration with NA10,

58:09 - 58:15

Harshith Vaddiparthi | Outskill: So, Google does not expose, Anet Notebook LM as an API key.

58:15 - 58:24

Harshith Vaddiparthi | Outskill: So Notebook LM, think of it as its own tool itself, and NA10 has nothing to do with it, so no way of connecting NA10. So that's...

58:24 - 58:36

Harshith Vaddiparthi | Outskill: That's a bummer right there. It's not possible to do so, but of course, you can go ahead and build your very own application. Something like this. Okay, what were we trying out, guys? Yeah, we tried, like, a council, right?

58:37 - 58:40

Harshith Vaddiparthi | Outskill: Let's open the dashboard and check how the council looks like.

58:42 - 58:45

Harshith Vaddiparthi | Outskill: That's all, guys. We just created our very own council.

58:45 - 58:49

Harshith Vaddiparthi | Outskill: Like, within the whole, you know, while doing our entire conversation itself.

58:49 - 58:53

Harshith Vaddiparthi | Outskill: If I just click on Ask the Council, I can just give it a prompt.

58:53 - 58:58

Harshith Vaddiparthi | Outskill: testing, testing... I don't think it'll work because we don't have an LLM connected.

58:58 - 59:02

Harshith Vaddiparthi | Outskill: And yes, you can add multiple of these models.

59:02 - 59:13

Harshith Vaddiparthi | Outskill: And you can just build your own UI. Guys, do you see that? As a non-coder, I was literally able to connect, you know, and build out anything while we were chatting itself.

59:13 - 59:24

Harshith Vaddiparthi | Outskill: So, Kama, I mean, think of it. If you sit down, and if you, you know, build this product out, it's gonna be a very powerful product, and you can actually, you know, sell it to a lot of different organizations and schools.

59:24 - 59:41

Harshith Vaddiparthi | Outskill: So yeah, this was the, answer, guys. I think someone mentioned, right, how do we connect, GetMulti with that codebase? GetMulti doesn't offer, but guys, we just built it out in the last, it just worked... it just fit... it finished it out in 4 minutes and 44 seconds. Nice, lucky number.

59:41 - 59:56

Harshith Vaddiparthi | Outskill: Right? It has also connected with my GitHub, so if I just, you know, load that codebase, that codebase is going to be, you know, loaded right now, and then I can just prompt it here. I can also select multiple LLMs. Okay, look at that.

59:56 - [01:00:11]

Harshith Vaddiparthi | Outskill: The Strategist is Sonnet, Challenger is this, the Pratmatist is Gemini. So just do that. Yeah, one thing though, you have to connect Open Router. Open Router is one API for all different APIs.

[01:00:11] - [01:00:29]

Harshith Vaddiparthi | Outskill: So I'm probably saying GetMulti is doing the same thing, as I could just, you know, go ahead and launch this right now. This is great. Why don't you call it Give Multi and host it on givemulti.hardship.com? Just host this as a real website.

[01:00:31] - [01:00:39]

Harshith Vaddiparthi | Outskill: That's all, guys. If I do this, it's just gonna go ahead, and it's gonna make it a real product, and it's gonna post it. So if that's live, you can check it out.

[01:00:42] - [01:00:57]

Harshith Vaddiparthi | Outskill: Okay. Again, another one from Zaheer. While using open-weighted models like Gemma or Quinn on our local laptops, how secure is the data which we are... which we share with the models? So, good question again, Zaheer. Let me give you the

[01:00:57] - [01:01:02]

Harshith Vaddiparthi | Outskill: technical, understanding for this. So here's what's happening, right?

[01:01:02] - [01:01:09]

Harshith Vaddiparthi | Outskill: So... so here's the thing, Zaheer. Let's say this is, like, what did I click?

[01:01:10] - [01:01:19]

Harshith Vaddiparthi | Outskill: Yeah, let's say you're using Gemma, Or you're using... Gwen, right? So what happens?

[01:01:25] - [01:01:30]

Harshith Vaddiparthi | Outskill: Let me quickly, quickly take... a laptop image.

[01:01:32] - [01:01:37]

Harshith Vaddiparthi | Outskill: Put that here. Okay, so what happens if you download these models?

[01:01:37] - [01:01:45]

Harshith Vaddiparthi | Outskill: on your laptop, right? So the moment you download these models on your laptop, here's one cool thing that happens.

[01:01:46] - [01:02:02]

Harshith Vaddiparthi | Outskill: Right? If it's about security, right? If the constraint is about security, or if you're just trying to understand the security part, so here's how it works. Whatever you're working with right now, if you... if, let's say, if you're doing GEMA, and if you give a prompt, right.

[01:02:02] - [01:02:06]

Harshith Vaddiparthi | Outskill: The entire computation of this model

[01:02:06] - [01:02:09]

Harshith Vaddiparthi | Outskill: Is happening inside your computer itself.

[01:02:10] - [01:02:17]

Harshith Vaddiparthi | Outskill: So, whatever information, or whatever file, or whatever, you know, input you give to that model.

[01:02:17] - [01:02:24]

Harshith Vaddiparthi | Outskill: The computation is happening inside your own chip, inside your own MacBook chip itself.

[01:02:24] - [01:02:36]

Harshith Vaddiparthi | Outskill: So it's not leaving anywhere. So it is the most secure thing that you can ever do with local LLMs, right? So, whatever you do, the processing is happening on your computer itself.

[01:02:36] - [01:02:54]

Harshith Vaddiparthi | Outskill: Right? Does that make sense, Zahir? Right? So, it is the most secure thing. It's literally happening in your computer. So, it's not like Qwen is, you know, learning from your info. No, that's not happening, because Qwen is different now. You have downloaded the model on your app.

[01:02:54] - [01:02:56]

Harshith Vaddiparthi | Outskill: That's how it works.

[01:02:58] - [01:03:12]

Harshith Vaddiparthi | Outskill: Okay, one from Sunil. Can you show a very quick process to create an 8 to 9 minute video on YouTube? Honestly, Sunil, this is literally what I've been trying out last night. Let me, let me show you my own video, if I can... I can.

[01:03:12] - [01:03:16]

Harshith Vaddiparthi | Outskill: I tried to create, like, a video last night.

[01:03:16] - [01:03:23]

Harshith Vaddiparthi | Outskill: And I called it, actually, let's, let's see. So I'll tell you the tools that I'm kind of using for this.

[01:03:25] - [01:03:31]

Harshith Vaddiparthi | Outskill: Thulemi... Let me see, where's the video?

[01:03:33] - [01:03:38]

Harshith Vaddiparthi | Outskill: Okay, guys, I'm gonna show a video right now. It's slightly funny, but please...

[01:03:39] - [01:03:42]

Harshith Vaddiparthi | Outskill: Just, bear with me.

[01:03:42] - [01:03:45]

Harshith Vaddiparthi | Outskill: So I just made this video really quick, Sunil.

[01:03:47] - [01:03:54]

Harshith Vaddiparthi | Outskill: Let me see if that is showing up. Yeah, this is still taking some time, but you can look at this, okay? Let's listen to that and look into it, okay?

[01:03:54] - [01:04:08]

Audio shared by Harshith Vaddiparthi | Outskill: AI safety just became a presidential roast. Dario Amodeh, the guy behind Claude, wants independent checks and a coordinated pace for frontier AI. Trump's response? America needs to win. Also, he's a high IQ president, and Dario is apparently a perfect little angel. Excellent.

[01:04:09] - [01:04:20]

Harshith Vaddiparthi | Outskill: Okay, so that's basically the entire video, so I made it 43 seconds, but, it should be live... yeah, this is the proper 3-minute video I've just... I've generated, as you can see.

[01:04:20] - [01:04:31]

Audio shared by Harshith Vaddiparthi | Outskill: AI was supposed to save you time. It did. Then it generated enough work to fill the time it saved. Congratulations, you are now the unpaid quality assurance department for a machine that...

[01:04:31] - [01:04:49]

Harshith Vaddiparthi | Outskill: Yeah, that's basically a 3-minute video that I've done. And my workflow of doing it was completely on even the thumbnail creation. Even the thumbnail creation, everything was all done on ChatGPT itself. But if I give you, like, an automated workflow on how to do this on NA10, because I will be taking this to NA10 next.

[01:04:49] - [01:04:57]

Harshith Vaddiparthi | Outskill: First, I work through my process, then I'll be making it automated. The way I've done it, Sunil, is by using something called as...

[01:04:57] - [01:05:01]

Harshith Vaddiparthi | Outskill: Hyperframes. Let me... let me put that link in the chat.

[01:05:02] - [01:05:17]

Harshith Vaddiparthi | Outskill: it's called Hyperframes, and what does Hyperframes do? It lets AI agents compose videos and, you know, just literally by writing code. I don't know, that's a bad marketing sentence, it kind of complicates it.

[01:05:17] - [01:05:24]

Harshith Vaddiparthi | Outskill: The best way to... the best way I can put it is, you type in, and it creates the video.

[01:05:24] - [01:05:26]

Harshith Vaddiparthi | Outskill: That's the best way I can tell you.

[01:05:26] - [01:05:36]

Harshith Vaddiparthi | Outskill: So, HyperFrames does it. So, if you... if I just go back to my prompt, okay, please ignore my, language, guys, while I'm talking to ChatGPT.

[01:05:36] - [01:05:48]

Harshith Vaddiparthi | Outskill: Okay. So, what I'm trying to say here is, if you use Hyperframes, you can give it images, you can give it memes, you can give it GIFs, you know, you can give it multiple of that stuff.

[01:05:48] - [01:06:01]

Harshith Vaddiparthi | Outskill: And it's... and just give it access to an LLM as well. Once you do that, whatever topic you've asked it to create the video on, it's gonna create a video like this.

[01:06:01] - [01:06:07]

Harshith Vaddiparthi | Outskill: That's one way to do that. And my voice, guys, does it sound like me? Give me a yes in the chat if it does.

[01:06:07] - [01:06:12]

Audio shared by Harshith Vaddiparthi | Outskill: 21% also said their backlog of ideas waiting to be tested had grown compared with 3 years.

[01:06:12] - [01:06:18]

Harshith Vaddiparthi | Outskill: Yes, so that's basically a clone voice. Okay, it does not, it does not? 98%, kind of? Okay.

[01:06:18] - [01:06:32]

Harshith Vaddiparthi | Outskill: So, that's basically using 11 Labs, right? It's using 11 Labs. So, Sunil, if you combine both of them, you can, you know, you can get a video of sorts. Of course, it can go as long as you want it to.

[01:06:32] - [01:06:41]

Harshith Vaddiparthi | Outskill: Again, you can also give it multiple different assets. If you already have some videos already shot, you can give that as well. It can edit them by itself.

[01:06:42] - [01:06:46]

Harshith Vaddiparthi | Outskill: So, that's basically what I would suggest. So, look into hyperframes.

[01:06:46] - [01:06:55]

Harshith Vaddiparthi | Outskill: Okay. Okay, another one from, Sunil right here. In case I want to learn something, for which skill

[01:06:55] - [01:07:08]

Harshith Vaddiparthi | Outskill: I do not have any idea or insight, for example, marketing or creating a funnel for promotion, then how to train my Cloud and ChatGPT. Number one, your Cloud and ChatGPT already has that skill.

[01:07:08] - [01:07:16]

Harshith Vaddiparthi | Outskill: They already... sorry, it already is inbuilt, right? Now these models are so powerful that they already have those skills inbuilt.

[01:07:16] - [01:07:24]

Harshith Vaddiparthi | Outskill: So you don't have to train them. That's one. The second thing, Sunil, is skewing it and narrowing it down.

[01:07:24] - [01:07:30]

Harshith Vaddiparthi | Outskill: This case, you have to go to something called as skills.sh.

[01:07:31] - [01:07:42]

Harshith Vaddiparthi | Outskill: Let me put that in the chat as well. Something called a skins.sh. Now, if you go to the skins.sh, what did you mention here, Sunil? You said, funnel, right? Funnel.

[01:07:42] - [01:07:52]

Harshith Vaddiparthi | Outskill: Marketing funnel. Did I cancel it off? Yeah. Just go ahead and type in Marketing, funnel.

[01:07:53] - [01:07:59]

Harshith Vaddiparthi | Outskill: Funnel analysis, growth funnel, okay, you found something right here. Growth funnel.

[01:07:59] - [01:08:03]

Harshith Vaddiparthi | Outskill: Take that, right? It's a marketing skill called growth funnel.

[01:08:03] - [01:08:14]

Harshith Vaddiparthi | Outskill: Read through it. Look at that. So powerful. Acquisition, activation, retention, referral, revenue. This is something that, you know, you actually literally find in, like, B schools, right? Business schools teach all of this.

[01:08:15] - [01:08:22]

Harshith Vaddiparthi | Outskill: Now all you have to do is just... Copy that prompt, go to your, GPT,

[01:08:24] - [01:08:27]

Harshith Vaddiparthi | Outskill: Paste that. Let me give it access again.

[01:08:27] - [01:08:31]

Harshith Vaddiparthi | Outskill: And then just say, Install this for yourself.

[01:08:32] - [01:08:38]

Harshith Vaddiparthi | Outskill: That's it Once that skill is installed, the next time you talk to it, you can just say, hey.

[01:08:39] - [01:08:56]

Harshith Vaddiparthi | Outskill: using your existing skill, help me create a funnel for so-and-so. Guys, that's literally the hack. How do you think I have no experience in enterprise AI, am able to serve clients, you know, in enterprise AI, QuickBooks? Guys, I hated accounting, you know, in my...

[01:08:56] - [01:09:08]

Harshith Vaddiparthi | Outskill: school days. I literally hated accounting and all of that. But I literally built out, like, an accounting product itself, and I sold it to a private equity firm. Such an irony, right? And it all happened with these skills itself.

[01:09:08] - [01:09:17]

Harshith Vaddiparthi | Outskill: If you find the skills, if you give it to your AI, if you train it, if you ask it to, you know, understand it, you can just, you know, build with it.

[01:09:17] - [01:09:23]

Harshith Vaddiparthi | Outskill: That's the best way, guys. That's the accuracy. It's all the skills. So just, you know, try that out.

[01:09:24] - [01:09:32]

Harshith Vaddiparthi | Outskill: And if I quickly have to show you something as well. So, if you can see this, this is the kind of skills that I've just made. So, if I just show you...

[01:09:40] - [01:09:41]

Harshith Vaddiparthi | Outskill: Hey, Jarvis.

[01:09:41] - [01:09:41]

Audio shared by Harshith Vaddiparthi | Outskill: It's.

[01:09:41] - [01:09:42]

Harshith Vaddiparthi | Outskill: Testing, testing?

[01:09:42] - [01:09:54]

Harshith Vaddiparthi | Outskill: I am just finishing up... I'm just wrapping up my, entire session. Can you just give a quick thank you note for everyone for listening to my office hours? A very quick one-liner thank you note, Jarvis.

[01:09:57] - [01:10:01]

Audio shared by Harshith Vaddiparthi | Outskill: Thank you, everyone, for joining my office hours, and for your time and attention today.

[01:10:03] - [01:10:10]

Harshith Vaddiparthi | Outskill: Guys, that's basically it. Guys, as a non-coder, how am I able to do this? It's all skills, right?

[01:10:10] - [01:10:27]

Harshith Vaddiparthi | Outskill: So look into the skills, look into the hyperframes and all that, and all the resources, and of course, we do have another list of questions. I'll do try to take them tomorrow as well. And what I'll try to give you guys is, I'll try to prepare a document, guys, of everything that we have just, you know, done here.

[01:10:27] - [01:10:41]

Harshith Vaddiparthi | Outskill: And I'll give my agent, and he'll create a very nice documentation, and I'll share it with Sumedha, and you guys will be finding that in your LMS. So that's one thing I can, you know, offer you guys. So yeah, that's about it for today, guys, and that's my time. Thank you again.

[01:10:42] - [01:11:00]

Sumedha: Thank you so much, Harshith. That was an amazing, amazing, interesting session. So, how was it, people? I can already see the amazings and thank yous coming in with the hearts. So, thank you so much, Harshith. With that, I'll let you go take over, and have some rest, and we will see you again tomorrow.

[01:11:00] - [01:11:01]

Harshith Vaddiparthi | Outskill: Thank you.

[01:11:02] - [01:11:11]

Sumedha: Thank you. Alright, people, we know the drill, so we will go ahead, take a 30-minute quick break, and we will be back for our main session.

[01:11:11] - [01:11:28]

Sumedha: So, we have Chittitesh covering AI Agents today in our main session. So, we will be, joining back, restarting in another 30 minutes. 29 to be precise. So, 7.30pm ISD is when we are gonna rejoin using the same link.

[01:11:28] - [01:11:40]

Sumedha: Alright, with that, thank you for joining in. The recordings, the resources, everything will be shared with you using your LMS, and yeah, thank you everyone for joining in. See you in a bit.
