

Day 8 Office Hours Session

00:01 - 12:30

Audio shared by Sumedha: [Pre-session music played; lyrics not transcribed.]

13:15 - 13:23

Shasti: Hello, everybody. Welcome back. Welcome back to day 8 of your AI Accelerator program. How are you guys doing?

13:25 - 13:29

Shasti: Am I audible, visible? The chat is open for everyone.

13:32 - 13:33

Shasti: Yes?

13:35 - 13:37

Shasti: Loud and clear? Great.

13:38 - 13:51

Shasti: Good morning, good evening, good afternoon, whichever part of the world you guys are joining from. I hope after the two intense days we had yesterday and the day before, you guys still have the energy to show up.

13:51 - 13:55

Shasti: I'm doing well, thank you so much. I hope you guys are doing well, too.

14:00 - 14:01

Shasti: Good.

14:03 - 14:04

Shasti: Perfect.

14:05 - 14:08

Shasti: Great. With that said,

14:08 - 14:19

Shasti: How he says, hi, survivors. Yes, I think all of you guys are survivors, and kudos to all of you for showing up today, after the two intense days we had.

14:20 - 14:25

Shasti: When do you sleep? Good question, Patricia. I'll get back to that very soon.

14:26 - 14:28

Shasti: Alive and kicking. Great.

14:28 - 14:51

Shasti: Great. Thank you so much, everybody, for joining the office Hours today. I know that it is not easy for all of you as well, to absorb so much content in the last few days, and also to show up daily. We really, really appreciate it, and I'm sure that all of you will be proud of yourselves at day 14 when you look back and see what kind of stuff that you have done and you have learned in the span of 14 days. So, let's keep this going.

14:52 - 15:16

Shasti: With that said, we will quickly get into the agenda for today. As we had in week one, we will continue with the office hours, starting this week as well. We will have office hours from today till day 13 of your program, from 6pm IST to 7pm IST, and we have an amazing mentor already in the call. Most of you would have already met her in one of the breakout rooms in week 1 of your program.

15:16 - 15:23

Shasti: We have Samriti here, who's gonna take up all your questions. Team, we can also drop the Slido link here in the chat.

15:23 - 15:29

Shasti: Go ahead, the format remains the same. Drop all your questions in the Slido link that will be posted.

15:29 - 15:36

Shasti: And then, Samruddhi will take up all the questions today as much as we can, and anything that is left out, we will pick it up tomorrow.

15:38 - 15:49

Shasti: The API key... what's it? Validity. API keys were active till 6pm IST today, which is, like, 5 minutes back, and it is revoked as of now.

15:50 - 15:55

Shasti: With that said, let me drop the Slido link in the chat.

16:06 - 16:07

Shasti: Yep.

16:07 - 16:10

Shasti: There you go. I have dropped the Slido link in the chat.

16:10 - 16:15

Shasti: With that, welcome, Samriti. It's good to have you again in our office hours.

16:19 - 16:23

Shasti: Looks like... Cannot hear Samriti.

16:23 - 16:24

Samruddhi Mokal Outskill: Am I audible now?

16:25 - 16:26

Shasti: Yes, you are audible.

16:26 - 16:28

Samruddhi Mokal Outskill: Hello, everyone, how are you guys doing?

16:32 - 16:33

Shasti: this?

16:33 - 16:41

Samruddhi Mokal Outskill: And, we'll quickly get started with the Slido. I hope I'm audible, guys. If not, I'll just switch my network to a different network.

16:44 - 16:45

Samruddhi Mokal Outskill: Okay, perfect.

16:46 - 16:49

Samruddhi Mokal Outskill: I hope my screen is also visible now.

16:51 - 16:52

Samruddhi Mokal Outskill: Alright...

16:56 - 16:58

Samruddhi Mokal Outskill: Starting with the first question.

16:59 - 17:19

Samruddhi Mokal Outskill: If we use NATN locally, should I have GPT downloaded locally too? No. So, even if you're downloading NN locally, only NN software is going to be locally, but the connections are still going to work same. The authentications are still going to work same, so it does not mean if NATN is locally downloaded, your GPT also should be locally downloaded.

17:23 - 17:36

Samruddhi Mokal Outskill: Zaheer, what tools can we integrate to Hermit's desktop app so that it will have persistent memory? Does Mem0 work with Hermes? Also, Hermis has its own memory, so Hermis was built to be...

18:00 - 18:01

Shasti: Looks like,

18:01 - 18:03

Samruddhi Mokal Outskill: Any tools that you want to this.

18:04 - 18:09

Shasti: Hey Samriti, looks like your internet is a bit choppy, we lost you in the middle.

18:10 - 18:12

Samruddhi Mokal Outskill: Okay, I'll switch to a different network, no worries.

18:12 - 18:13

Shasti: Yeah, you should.

18:18 - 18:23

Shasti: Let's give a minute to Samrati folks, and then we will get started.

18:28 - 18:31

Shasti: Slido link is dropped in the chat, let me drop...

18:31 - 18:32

Samruddhi Mokal Outskill: Sounds big.

18:35 - 18:35

Samruddhi Mokal Outskill: Hello?

18:36 - 18:39

Shasti: Yes, Samriti. Can you hear us?

18:39 - 18:42

Samruddhi Mokal Outskill: Yeah, yeah, I'm able to hear you. Am I audible?

18:42 - 18:45

Samruddhi Mokal Outskill: I have checked in my undergrad network, I hope that will work now.

18:46 - 18:47

Shasti: Yeah, we can hear you enough.

18:47 - 18:49

Samruddhi Mokal Outskill: Or does our third network, no 20.

18:49 - 18:50

Shasti: Go ahead.

18:50 - 18:55

Samruddhi Mokal Outskill: Okay. Also, what tools can we integrate to Hermit's desktop app?

18:55 - 18:58

Samruddhi Mokal Outskill: for persistent memory, Hormus was built to

18:58 - 19:18

Samruddhi Mokal Outskill: to be trained upon what type of tasks you do upon it. So it has its own memory, you do not have to add a separate memory layer. And coming to the part, does MEM0 work, you can definitely add your own memory layer to it. And what tools, apart from Mem0, you can connect any tool that you want. So taking into account, let's say, Hermes or any other

19:19 - 19:35

Samruddhi Mokal Outskill: similar types of agents that you have seen are all built on top of MCP servers. So even if you do not see a specific connection or tool that is available in Hermit or any other app, you can definitely go and connect the MCP servers that are out there, or you can create your own MCP servers and connect to these agents.

19:39 - 19:54

Samruddhi Mokal Outskill: Alright. I keep getting confused about the concepts of MCP, API, and webhooks. Sometimes people use MCP to connect two apps, sometimes they use APIs, and sometimes they use webhooks. How does one decide which one to use? Okay.

19:54 - 19:58

Samruddhi Mokal Outskill: So, let's start with API. What API does is...

19:58 - 20:02

Samruddhi Mokal Outskill: EPA lets you talk to two different softwares or tools.

20:02 - 20:09

Samruddhi Mokal Outskill: But for API to work, you have to trigger a request so that the other software will answer you back.

20:10 - 20:12

Samruddhi Mokal Outskill: So think of it like you are calling the other software.

20:12 - 20:18

Samruddhi Mokal Outskill: It is picking up the call, and then it is giving you back the answer. So that is how API works.

20:18 - 20:24

Samruddhi Mokal Outskill: Coming back to webhooks, WebBooks is something, let's say you are already on the line, and

20:24 - 20:27

Samruddhi Mokal Outskill: You have asked someone to do something.

20:28 - 20:33

Samruddhi Mokal Outskill: And once that work is done, that person is automatically coming back to you and telling, okay, this job is done.

20:33 - 20:44

Samruddhi Mokal Outskill: So when some action takes place, only then webhooks are triggered. So webhooks are going to be... think of it like webhooks are live always. Only when the specific action is done.

20:44 - 20:47

Samruddhi Mokal Outskill: They receive the data, or they trigger the workflow.

20:47 - 20:50

Samruddhi Mokal Outskill: And third is MCPs.

20:50 - 20:55

Samruddhi Mokal Outskill: MCPs were recently introduced, For sake of AI agents.

20:55 - 20:58

Samruddhi Mokal Outskill: MCPs are a layer on top of APIs.

20:59 - 21:01

Samruddhi Mokal Outskill: So what MCPs do is.

21:01 - 21:09

Samruddhi Mokal Outskill: MCPs are, by default, connected to all the API endpoints that are there for those specific softwares. So, for example, you guys saw,

21:10 - 21:14

Samruddhi Mokal Outskill: Yesterday, how we connected a lot of different tools, for Jaeen.

21:15 - 21:17

Samruddhi Mokal Outskill: Yeah, so this was your jerry.

21:19 - 21:24

Samruddhi Mokal Outskill: So you have, let's say, these 5 different tools that are connected to your jerry.

21:24 - 21:33

Samruddhi Mokal Outskill: But what used to happen was, since this AI agent has context of a lot of different tools, they started hallucinating, and they did not take proper action.

21:33 - 21:41

Samruddhi Mokal Outskill: So MCPs were introduced so that instead of connecting 100 different tools, you just connect MCP servers, and MCPs route those things

21:41 - 21:45

Samruddhi Mokal Outskill: Further to require tools or required API calls.

21:45 - 22:01

Samruddhi Mokal Outskill: So think of, instead of this sub-agent, you have an MCP server. So you're routing this to MCP server, and MCP server further routes to write API calls, or, write tools. So there is another version of this that is called as Jarvis, I'll show that, that might give you a better understanding about it.

22:09 - 22:12

Samruddhi Mokal Outskill: Also, think of this like Jerry, but a bit more advanced Jerry.

22:18 - 22:22

Samruddhi Mokal Outskill: This is built upon MCP servers, built on top of MCP servers.

22:26 - 22:44

Samruddhi Mokal Outskill: So this is the main workflow, or the orchestrator workflow, and these are all the MCP servers. For example, this is Task Manager MCP, this is Calendar MCP, this is Gmail MCPs. So, all of these nodes are connected to separate MCP servers, and these MCP servers are added to your master orchestrator, or the main agent.

22:45 - 23:01

Samruddhi Mokal Outskill: And one... another pro of building MCP servers is, let's say I build this calendar MCP server, and I have another NATN workflow, so I can use this MCP server's URL at multiple places. I do not have to every time go and add these 10 different tools to every workflow.

23:01 - 23:06

Samruddhi Mokal Outskill: So, that is the... that is more about MCP servers. I hope that cleared your doubt.

23:13 - 23:14

Samruddhi Mokal Outskill: Okay.

23:15 - 23:24

Samruddhi Mokal Outskill: In all the demonstrations, the Gmail account was not advised to be authenticated, it means all Gmails are open. If anyone gets access to the production link.

23:25 - 23:31

Samruddhi Mokal Outskill: then they have access to the Gmail. This is... that is very dangerous. I'm unable to add now. Please advise.

23:32 - 23:40

Samruddhi Mokal Outskill: So, I'm not sure which part exactly you mean in this, but whatever nodes we connected, whether it's Gmail, whether it's Google Sheets.

23:41 - 23:47

Samruddhi Mokal Outskill: When you connected it, or when you signed in, by adding the credentials, you gave it certain permissions.

23:47 - 23:53

Samruddhi Mokal Outskill: And, by default, giving permissions does not mean it will read it.

23:53 - 24:02

Samruddhi Mokal Outskill: So, we are just giving it permissions that it can do the job, but unless and until you execute the workflow, or you trigger the workflow, it will not go and read it.

24:02 - 24:10

Samruddhi Mokal Outskill: Whether it's reading, whether it's sending the email, it does not, by default, giving permissions, it will do that job, unless and until you trigger the workflow or execute it.

24:11 - 24:16

Samruddhi Mokal Outskill: So, if you're not able to add, just, Go to this, for example.

24:17 - 24:30

Samruddhi Mokal Outskill: Go to Credentials, go to Create New Credentials, and sign in with Google. When you sign in with Google, a pop-up will appear, it will ask you for certain permissions, make sure you give it all the permissions, or else when you trigger the workflow, it won't do the job.

24:31 - 24:33

Samruddhi Mokal Outskill: Alright.

24:38 - 24:43

Samruddhi Mokal Outskill: How do we set up our own rack with an offline setup? What do we install beforehand?

24:44 - 25:00

Samruddhi Mokal Outskill: So if you mean you want to run it on local models, just try out Mischi Studio or LM Studio. They have their own RAGs or knowledge bases type of integrations available, so you just upload your documents over there, and it will run locally on your laptop or on your offline setups.

25:00 - 25:11

Samruddhi Mokal Outskill: But if you want to create your own RAGs where you want to integrate it on websites, etc, you can create a knowledge base on Pinecone Vector Store or any other vector store, and you can just

25:11 - 25:18

Samruddhi Mokal Outskill: Use that knowledge base, or review that knowledge base in your, Workflows or other codings.

25:21 - 25:29

Samruddhi Mokal Outskill: Yesterday we learned about a smaller, cool version of Jerry. I understand this week we will learn more components, like backend and front-end.

25:29 - 25:37

Samruddhi Mokal Outskill: In the end, would you be able to share what all components are part of the real full jerry, such as, such that we can make our version in the end?

25:37 - 25:46

Samruddhi Mokal Outskill: I will call mine sarthiit, okay? Also, this is something that Sumedha or Shasti will be able to answer what is part of today's, sorry, today's session or, this week.

25:50 - 26:02

Samruddhi Mokal Outskill: I would like to talk... walk through Firefly's tool integration again, from step 7 to step 9. So I'm assuming this is Firefly's API you're not able to figure out. I'll just quickly demonstrate how to get Firefly's API.

26:18 - 26:21

Samruddhi Mokal Outskill: Okay, so you can go to Settings.

26:23 - 26:33

Samruddhi Mokal Outskill: In settings, you can find MCP and API. So here, you can find your own MCP server as well as the API key. So just two steps, go to Setting and go to MCPs and APIs.

26:38 - 26:59

Samruddhi Mokal Outskill: This question is from our workbook from yesterday, where we created a conversation agent named Jerry. As the name suggested, I thought we were going to have a trigger, which could be a voice message, not necessarily a text message. While we started with the chat trigger, kindly explain. So, this was already addressed by Sumedha yesterday, like, we are going to have, or you guys are going to learn, or Jerry, we...

26:59 - 27:00

Samruddhi Mokal Outskill: Version 2 later on.

27:00 - 27:02

Samruddhi Mokal Outskill: But how to add this is...

27:03 - 27:14

Samruddhi Mokal Outskill: What you need is, first thing is, you need something that will accept your audio. For example, in Telegram, take example of this workflow. It is accepting both types of files, that is text and audio.

27:15 - 27:31

Samruddhi Mokal Outskill: So when you get an audio file, the next thing you have to do is, you have to transcribe it to a text. Reason being, can you process... can AI agents process audio files? Yes, definitely. But that is very costly. So what you do is, one step that you have to add is, you have to understand

27:31 - 27:43

Samruddhi Mokal Outskill: which type of file you are receiving. If it is a text, you can directly pass it on to your master orchestrator. If it is, audio, you have to add one more step of transcribing it, and then you can pass it on to the,

27:43 - 27:49

Samruddhi Mokal Outskill: master orchestrator. I'll also share the... this workflow, I'll share the JSON of this workflow, so you guys can take a look at it later on.

28:01 - 28:04

Samruddhi Mokal Outskill: Oh, yes, I shared it in the chats, guys, you can later on take a look at it.

28:11 - 28:15

Samruddhi Mokal Outskill: If you're using ChatGPT downloaded version, Then there's...

28:16 - 28:30

Samruddhi Mokal Outskill: Does we need to care about tokens? Downloaded version used to be unlimited, how does it work? No. So, unless and until you're using open source models, it is not unlimited or it is not free. There are going to be limits, whether you download it locally or,

28:31 - 28:46

Samruddhi Mokal Outskill: Whether you are using it on web. So if you're downloading ChatGPT's app as such, then it is definitely chargeable. But if you're downloading GPTs or OpenAI's models, which are open source, then they are open source, they are free.

28:46 - 28:52

Samruddhi Mokal Outskill: But any models that you see on web version, even if you download that locally, they are self-chargeable.

28:57 - 29:09

Samruddhi Mokal Outskill: how do we, the Jerry we built yesterday on my phone? So, I'm assuming users missed here. So how do you use Jerry? So, one way is, I just shared a Java's workflow. Similarly, you can connect it to your,

29:09 - 29:18

Samruddhi Mokal Outskill: Let's say Telegram, or you can connect it to WhatsApp. I have another workflow for customer support WhatsApp. I'll show that workflow. That will give you an understanding about how to connect it with WhatsApp.

29:35 - 29:37

Samruddhi Mokal Outskill: Okay, this is another one.

29:41 - 29:49

Samruddhi Mokal Outskill: Yeah, this one. So here you can see that it accepts 3 types of inputs on WhatsApp. This is voice, image, and text.

29:49 - 29:52

Samruddhi Mokal Outskill: So, for audio, it is going to here.

29:52 - 29:54

Samruddhi Mokal Outskill: For image, it is going here.

29:54 - 30:06

Samruddhi Mokal Outskill: So for both of this audio and your image and text, sorry, image, you have to add a transcription before you pass it on to your AI agent. So here we are analyzing the image, here we are transcribing the audio.

30:06 - 30:17

Samruddhi Mokal Outskill: And then further, you can pass it on to your master orchestrator. So, steps still here are what you'll have to follow if you want to connect your Jerry to WhatsApp, and from here, you'll have to add your master orchestrator.

30:18 - 30:20

Samruddhi Mokal Outskill: I'll share this JSON as well.

30:33 - 30:36

Samruddhi Mokal Outskill: Alright, I have shared it in the chat space.

30:37 - 30:40

Samruddhi Mokal Outskill: Going back here...

30:43 - 30:51

Samruddhi Mokal Outskill: Please explain the concept of webhooks in NN. Why are they used, and could you demonstrate how to create one? We had imported one in breakout room.

30:52 - 30:56

Samruddhi Mokal Outskill: I did not create one, hence the request, okay. So I...

30:56 - 31:02

Samruddhi Mokal Outskill: took the previous question about webhooks, APIs, and MCP servers, but if it is still not clear.

31:03 - 31:13

Samruddhi Mokal Outskill: I'll distinguish all three so that you get an idea about where webhooks stand exactly. So, starting with the APIs. APIs let you talk to different types of software. So, APIs are like a...

31:13 - 31:29

Samruddhi Mokal Outskill: secret password, which you get from your account, and if you give it to a different account, it will connect both of those. But, for your APIs to work, every time, you have to call and check to that other software that if this task is done or not.

31:29 - 31:40

Samruddhi Mokal Outskill: That is how APIs work. Coming to the webhooks, webhooks are something like a link that you'll get. So, have you created your Google Forms on NN, right? So, similarly, NATN will give you a webhook link.

31:40 - 31:45

Samruddhi Mokal Outskill: So, WebBook Link is something that you'll have to connect to the different software that you want to talk to.

31:46 - 31:54

Samruddhi Mokal Outskill: And when webhooks get triggered is, as soon as a specific action takes place in the other software, it will pass on that information through webhooks.

31:55 - 32:05

Samruddhi Mokal Outskill: So webhooks are triggered when something happens at the other end. APIs are something that you will have to trigger from your end, only then the other software fires it back with the right response.

32:06 - 32:09

Samruddhi Mokal Outskill: And MCPs are just a layer on top of your APIs.

32:12 - 32:17

Samruddhi Mokal Outskill: And for your webhooks, In terms of NATN,

32:28 - 32:30

Samruddhi Mokal Outskill: So, this is a customer support chatbot.

32:30 - 32:37

Samruddhi Mokal Outskill: So for any workflows, you have a webhook node. This webhook node is going to give you your webhook URL.

32:37 - 32:45

Samruddhi Mokal Outskill: So whenever you are using it in other websites, you'll have to switch to production URL, and copy this production URL, and make sure your workflow is live.

32:45 - 32:48

Samruddhi Mokal Outskill: And if you want something to be responded back.

32:48 - 32:51

Samruddhi Mokal Outskill: For example, let's say you're creating a customer support agent.

32:51 - 32:58

Samruddhi Mokal Outskill: Through webhook, what you're getting is what that customer has asked on the chatbot. That is what is getting received in the webhook.

32:58 - 33:06

Samruddhi Mokal Outskill: But after this workflow is completed, you also have to trigger back that, okay, this was the response, or this is what your RAG got.

33:06 - 33:10

Samruddhi Mokal Outskill: In that case, your workflow always ends with a respond to webhook.

33:10 - 33:17

Samruddhi Mokal Outskill: But let's say, in this case, you just want to log all the data to your Google Sheets or your database, then respond to webhook is not required.

33:26 - 33:28

Samruddhi Mokal Outskill: How should I connect a white-coded website?

33:29 - 33:39

Samruddhi Mokal Outskill: or intake form to entertain a database and other business systems. So I think you guys will learn this this week, but you can always connect... create webhooks.

33:39 - 33:43

Samruddhi Mokal Outskill: And while Vipe coding, tell that this is the webhook that you want to

33:43 - 33:56

Samruddhi Mokal Outskill: use, and to get the data or to get anything. And to add to your database, NATN has superbase nodes, whatever database that you have. You can just add those required nodes and store your data wherever you want.

34:00 - 34:06

Samruddhi Mokal Outskill: Can you share this one as well? I'm assuming that was for the WhatsApp one. I have already shared the WhatsApp one.

34:10 - 34:26

Samruddhi Mokal Outskill: In yesterday's session, Vivek mentioned full-stack companies, another couple of links to where we can see what kind of product is in the market. The question is, how do we start with it? I think building a RAP pipeline, or what's your take on that? So I'm not sure what Vivek shared with you, but if you want to build

34:27 - 34:30

Samruddhi Mokal Outskill: Any type of product in the market, first is you have to realize

34:31 - 34:36

Samruddhi Mokal Outskill: what is the need for that? So all of these products that you see, they're solving a specific problem statement.

34:36 - 34:41

Samruddhi Mokal Outskill: So the important part is, even if you build a very cool, nice-looking product, if

34:42 - 34:45

Samruddhi Mokal Outskill: That problem is not there for people, people won't buy that product.

34:45 - 34:58

Samruddhi Mokal Outskill: So, figure out the right problem statement, and then build products on top of it. Is RAG one of them? Yes, definitely, RAG is one of them. Another way to find how... what is the demand of these products is, you can check out something called as Product Hunt.

35:03 - 35:13

Samruddhi Mokal Outskill: So, Product Hunt is something where a lot of techies launch their new products or softwares, and people give good feedback, so you can take a look at it, what are the top trending products, what are the

35:13 - 35:14

Samruddhi Mokal Outskill: Different things here.

35:15 - 35:18

Samruddhi Mokal Outskill: So you can check out different categories, etc.

35:18 - 35:21

Samruddhi Mokal Outskill: I'll share the link of Product Hunt.

35:23 - 35:33

Samruddhi Mokal Outskill: And another way is, you can always use Reddit. Reddit has a lot of communities where people share their good ideas, so that is my go-to, usually, Product Hunt and Reddit.

35:40 - 35:44

Samruddhi Mokal Outskill: Please go through setting N1N onto laptop and get N1N into

35:45 - 36:04

Samruddhi Mokal Outskill: Claude on the desktop, should this be done in terminally. Also, guys, setting up Anneton locally or on desktop is a very comprehensive process. If I start demonstrating that now, it will take one whole session for me to show that, and I think Shasti or Sumedha can confirm that there is a detailed video on how to do that in your LMS. Now, Shasti, am I right here?

36:06 - 36:14

Samruddhi Mokal Outskill: Okay, I think Shasti or Sumedha is not here, but there is a detailed video in your LMS, so you guys can go and look at it, because that is going to take a good amount of time. That will also

36:15 - 36:24

Samruddhi Mokal Outskill: get you detailed understanding, or I think you have documentation also, so just follow those steps over there, that will do that job. And getting into Claude.

36:25 - 36:28

Samruddhi Mokal Outskill: So if you mean the connector part, I'll show the connector part, that is a quick thing.

36:29 - 36:32

Samruddhi Mokal Outskill: So let's say this is your cloud, go to Customize.

36:32 - 36:35

Samruddhi Mokal Outskill: Go to Connectors, and search for NATM.

36:38 - 36:52

Samruddhi Mokal Outskill: In NHN right now, I have connected it already, NN's MCP server, but before, you'll be able to see a button called as Connect, and in Connect, you have to add one thing, that is your NHN's MCP server URL. How to get that is...

36:54 - 36:58

Samruddhi Mokal Outskill: Go to Settings, Go to Instance Level MCP,

37:01 - 37:05

Samruddhi Mokal Outskill: And here, make sure your MCP status is enabled.

37:05 - 37:23

Samruddhi Mokal Outskill: And you can click on this Connect Your Client, this will give you your MCP server URL. You just need this URL that you have to attach to your cloud and connect it. Your connection will be done. It will create workflows for you, it will do executions, create data tables, so these are all the tools, or these are all the actions that it can take for you on your behalf.

37:32 - 37:51

Samruddhi Mokal Outskill: To complete the pending NAT and workbooks and the day 2 video, how do we get any support in case of difficulties in completing the same? What about the

required API keys to complete the same? Guys, anything regarding the program or something, I'm not the right person to answer, so top those questions in the chat. Shasti or Sumedha will take those up. So about this, I'm not the right person to answer it.

37:51 - 37:57

Samruddhi Mokal Outskill: I think you guys have a Asa Doubt channel in LMS, I'm not sure, just confirm it with them.

37:58 - 38:03

Samruddhi Mokal Outskill: How to install locally on Windows? Yes, again, that video is there in your LMS.

38:07 - 38:13

Samruddhi Mokal Outskill: How do I save workflow created? So, N10 has default save. You don't have to save it separately.

38:13 - 38:32

Samruddhi Mokal Outskill: There is autosave in NN. Let's say, I think if you have seen a save button appear in your workbook, that is because previous versions of N10 did not have autosave option. So every time you do certain changes, you have to click on... you had to click on save, only then your workflow was saved, but right now, it is autosave. And another is, you can also

38:32 - 38:42

Samruddhi Mokal Outskill: see what version of N10 you are in, so go to Admin Panel, In Admin Panel, Go to Dashboard.

38:45 - 38:47

Samruddhi Mokal Outskill: Go to Manage.

38:47 - 38:50

Samruddhi Mokal Outskill: In Manage, you'll be able to see what version of N10 you are on.

38:51 - 38:52

Samruddhi Mokal Outskill: And in this, you can...

38:53 - 39:04

Samruddhi Mokal Outskill: select whatever is the latest stable version. If you want, you can also upgrade it to different versions that you want. So they keep updating their versions, or keep releasing new changes every couple of weeks.

39:05 - 39:10

Samruddhi Mokal Outskill: So you can check what version, if there is new version available, you can just upgrade it to new versions.

39:15 - 39:22

Samruddhi Mokal Outskill: When building Jerry for employee in a company, connecting Outlook Tool of employees, how do we get their authentications? Are there a...

39:22 - 39:31

Samruddhi Mokal Outskill: screen for employees to sign in. So whenever you're creating a workflow for someone else, you cannot get their authentication. You do not have to

39:31 - 39:33

Samruddhi Mokal Outskill: use their OAuth sign-in.

39:34 - 39:50

Samruddhi Mokal Outskill: But, all these companies have something called as admin control. And in that, you can create your own API keys. So, for example, Google has Google Cloud Console, so you can go there, you can create your own API keys, and all of these API keys, you can give specific access. For example, let's say,

39:51 - 39:53

Samruddhi Mokal Outskill: Outlook has different functionalities.

39:53 - 39:55

Samruddhi Mokal Outskill: For a specific API key, you can...

39:55 - 40:13

Samruddhi Mokal Outskill: configure only those functionalities. Let's say for one employee, you want to give 5 of those, for another employee, you want to give just 3. So all of that is possible through admin control, so that's where you can create separate API keys and do that, but you cannot ask sign-in of other users. So whether it's for employees, whether it's for clients, that's the way to do it.

40:17 - 40:23

Samruddhi Mokal Outskill: Want to start a social where I can post my learnings of AI and also report on the latest news?

40:24 - 40:28

Samruddhi Mokal Outskill: What are the best tools for video generation? What are the best tools for image generation?

40:28 - 40:34

Samruddhi Mokal Outskill: What are the best tools to create personal branding, and what are the best tools for creating a website? Okay.

40:34 - 40:52

Samruddhi Mokal Outskill: So, starting with the first question and second question, both are combined. Check out Hicksfield. Higgs field will give you both of those, image generation as well as video generation. At this point of time, Higgs field is the best. If you want to clone yourself, in that case, you will have to use Hygen. Hygen is, at this point of time, best.

40:52 - 41:00

Samruddhi Mokal Outskill: Another is, if you want to automate posting, etc, you can check out Blotato.

41:02 - 41:07

Samruddhi Mokal Outskill: And personal branding, I did not get specific, what exactly do you want to do in personal branding?

41:07 - 41:16

Samruddhi Mokal Outskill: So, if you can just type it in the chat what exactly you want to do in that. But I mentioned Plotato, you can check out Plotato. And, second, your website.

41:18 - 41:22

Samruddhi Mokal Outskill: You can create your website on Lubbable, if it is a very simple website.

41:24 - 41:25

Samruddhi Mokal Outskill: If you're,

41:26 - 41:40

Samruddhi Mokal Outskill: website is a bit detailed, you will have to use repeat, and if you want to create a website where you want to add a very heavy backend, then you can use plot code, or you can use, Antigis.

41:50 - 41:52

Samruddhi Mokal Outskill: Many people are questioning terms of cybersecurity.

41:54 - 42:07

Samruddhi Mokal Outskill: Can you speak to that, and what can be done to improve? Okay. So whenever you are creating the tools, you can just add one more step, that these are the things I want you to verify.

42:08 - 42:11

Samruddhi Mokal Outskill: Gaurav Lagging regarding just a second, guys, let me just,

42:16 - 42:17

Samruddhi Mokal Outskill: Check it.

42:22 - 42:24

Samruddhi Mokal Outskill: I find knowledge.

42:25 - 42:28

Samruddhi Mokal Outskill: It got auto-switched by another network.

42:30 - 42:32

Samruddhi Mokal Outskill: Hello, everyone, am I audible?

42:37 - 42:41

Samruddhi Mokal Outskill: Okay, am I back, guys?

42:46 - 42:55

Samruddhi Mokal Outskill: Okay, perfect, I... it got auto-switched to my default network, that's why it happened, sorry for that. I'll make sure my other networks are turned off from next time, yeah.

42:56 - 42:56

Samruddhi Mokal Outskill: Alright.

42:57 - 43:07

Samruddhi Mokal Outskill: So, many people have questions in terms of cybersecurity. Can you speak on that? So, there is always a best practice to add a verifier layer.

43:07 - 43:18

Samruddhi Mokal Outskill: And there are tools like Coding Agent, Coding app, and etc, where you can upload your code, and they can do all of the testing, all the QA testing, all the type of cybersecurity testing. They do.

43:18 - 43:19

Shasti: Saloni?

43:19 - 43:20

Samruddhi Mokal Outskill: Multiple.

43:20 - 43:25

Shasti: So sorry to interrupt, you're breaking, in between.

43:25 - 43:26

Samruddhi Mokal Outskill: Still breaking?

43:26 - 43:27

Shasti: Yes.

43:28 - 43:29

Shasti: There is a lag.

43:34 - 43:38

Shasti: Okay, folks, let's give Samrati a minute to rejoin.

43:50 - 43:51

Samruddhi Mokal Outskill: Oh, yeah. Am I part of this?

43:53 - 43:56

Shasti: Yeah, you are audible. Folks, is it better?

44:01 - 44:02

Samruddhi Mokal Outskill: Okay, perfect.

44:03 - 44:12

Samruddhi Mokal Outskill: So there was some tree cutting nearby, so they have just did a lot of changes on the wiring side, hence issued today. All right.

44:15 - 44:25

Samruddhi Mokal Outskill: I hope my screen is also visible now. Okay, so starting with this question, many people have questions in terms of cybersecurity. Can you speak to that, and what can be done to improve?

44:27 - 44:37

Samruddhi Mokal Outskill: The last answer was not clear. Alright, I'll go to the previous question. The previous question was about image generation, video generation. So, image and video generation, stick to Hexfield.

44:38 - 44:40

Samruddhi Mokal Outskill: If you just want to create images and videos.

44:41 - 44:45

Samruddhi Mokal Outskill: If you want to create your own clones, then switch to Heijen.

44:46 - 45:00

Samruddhi Mokal Outskill: Another question was about, posting, etc. So, personal branding, you can check out Blotato for that. Blotato does all of that for you. And last question was, help me, get the fourth question, guys, I'm not, getting what was the fourth question.

45:02 - 45:05

Samruddhi Mokal Outskill: Whoever asked this question, okay, website building.

45:05 - 45:11

Samruddhi Mokal Outskill: So, for website building, if you want a very good-looking website, just,

45:11 - 45:22

Samruddhi Mokal Outskill: Fancy UI, UX, not a very solid backend. Lovable is your go-to. At this point, Lovable creates amazing front-end, amazing websites. If you want to create some type of backend.

45:22 - 45:24

Samruddhi Mokal Outskill: Then you can switch to Replit.

45:24 - 45:26

Samruddhi Mokal Outskill: or bold.

45:26 - 45:30

Samruddhi Mokal Outskill: And if the backend is very, very heavy backend, then switch to

45:31 - 45:34

Samruddhi Mokal Outskill: Cursor, or claw code, or your anti-gravity.

45:35 - 45:39

Samruddhi Mokal Outskill: So Vivek spelling of Blotato is exactly what you typed, B-L-O-T-A-T-O.

45:46 - 45:47

Samruddhi Mokal Outskill: 100.

45:48 - 45:58

Samruddhi Mokal Outskill: I'll share all of these links with you guys later on, so don't worry about it. Whatever tools I'm mentioning, I'm going to create a comprehensive document, which is going to have everything, so that will be shared with you in your LMS later on.

46:00 - 46:07

Samruddhi Mokal Outskill: So, coming to the cybersecurity question, so whenever you're white coding something, the best practice is

46:07 - 46:09

Samruddhi Mokal Outskill: Always add a verifier layer.

46:09 - 46:15

Samruddhi Mokal Outskill: So you always add a step where you ask AI to double-check on it, because this AI is

46:15 - 46:22

Samruddhi Mokal Outskill: or any type of LLM that you take, they're very good at telling yes to everything. So you need to add your own guardrails.

46:23 - 46:35

Samruddhi Mokal Outskill: And another is, there are a lot of QA or cybersecurity-related tools which do all of those checks for you on your codebase. So just use those tools, you do not have to do any type of coding by yourself, just use those tools.

46:36 - 46:40

Samruddhi Mokal Outskill: That will do those jobs for you. You can check out Coding Ant for it.

46:41 - 46:48

Samruddhi Mokal Outskill: And... One... another thing is, you can try this La quera.

46:52 - 47:01

Samruddhi Mokal Outskill: Okay, so if you want to learn how LLMs work, or how someone can hack LLMs, what you can do is play this game called as Agent Breaker.

47:02 - 47:07

Samruddhi Mokal Outskill: That is built by Lakira. Lakira, at this point, is the... one of the best,

47:07 - 47:11

Samruddhi Mokal Outskill: companies working in cybersecurity, especially for AI agents.

47:12 - 47:16

Samruddhi Mokal Outskill: So it will ask you a lot of things, like what all... if you want to...

47:17 - 47:24

Samruddhi Mokal Outskill: see what is, prompt injections, what are different types of techniques that people use. So it is a game which unlocks a new level.

47:25 - 47:34

Samruddhi Mokal Outskill: So try playing this, try playing around, or try hacking your own AI in this game, and it will give you a way better understanding. I started with this, that helped me understand a lot of things.

47:34 - 47:37

Samruddhi Mokal Outskill: So... Yep.

47:50 - 47:53

Samruddhi Mokal Outskill: Shasti, for some reason, Slido is not working. It's not letting me...

48:00 - 48:04

Shasti: Yeah, looks like a system issue because I'm able to operate.

48:05 - 48:06

Samruddhi Mokal Outskill: Okay, let me refresh.

48:06 - 48:07

Shasti: Can you just refresh what?

48:08 - 48:08

Samruddhi Mokal Outskill: Yep.

48:11 - 48:15

Samruddhi Mokal Outskill: Okay, so this was done, this was done, alright.

48:15 - 48:27

Samruddhi Mokal Outskill: So when we are saying we can use local LLM, need feedback on the laptop or hardware required to run Harmus Agent Video Creation Agentic system. Also, whenever you're running models locally.

48:27 - 48:36

Samruddhi Mokal Outskill: It depends on what is the configuration of the model. So, let's say, if you're using Olama, or if you're using, Mischi, or LM Studio.

48:36 - 48:38

Samruddhi Mokal Outskill: All of these have...

48:38 - 48:46

Samruddhi Mokal Outskill: model configurations, and by default, they are mentioned, okay, if this is something that you can download on your system or not. So just check.

48:47 - 49:04

Samruddhi Mokal Outskill: If it is green for you, so they have different labels, let's say green, yellow, and red, red means your... that model's very heavy to run on your system. So just check those, and that will be done. And coming to Hermit's Agent or any agent, it will completely depend on what capabilities you want. If you just want

49:04 - 49:10

Samruddhi Mokal Outskill: Video creation, it will be fine. Your normal laptop as well, if you have a 16GB laptop, that will do that job for you.

49:11 - 49:20

Samruddhi Mokal Outskill: If you want a very heavy system, what you can do is... this is the best alternative, you do not have to buy new laptops. You can check out something called as RunPod.

49:25 - 49:26

Samruddhi Mokal Outskill: So, RunPod lets you

49:27 - 49:44

Samruddhi Mokal Outskill: rent these tools or hardware. For example, you can rent GPUs, different types of GPUs that you want, and you pay for that, let's say if you're using that GPU for

one Nahar, you're going to pay only for one Nahar, so they have hourly-based costing here. You can just rent these from here, and you can start using

49:45 - 49:49

Samruddhi Mokal Outskill: If you do not have good hardware. I'm hearing the link of RunPod as well.

49:50 - 49:53

Samruddhi Mokal Outskill: That's what I also do, like,

49:53 - 49:59

Samruddhi Mokal Outskill: Right now, I have M5 Pro, but still, sometimes when you're training models... when I used to train models, they were, like.

49:59 - 50:08

Samruddhi Mokal Outskill: data was in terabytes, so even if I have Mac, etc, very good one, I need GPUs, and that's where I rent GPUs and run

50:08 - 50:10

Samruddhi Mokal Outskill: My system's over there.

50:16 - 50:24

Samruddhi Mokal Outskill: Oh, hello, good evening. I have multiple questions. First, if we create NATN, And we create our agent.

50:24 - 50:29

Samruddhi Mokal Outskill: Over there locally, also running the workflow locally as compared to the cloud.

50:30 - 50:31

Samruddhi Mokal Outskill: What's your take on it?

50:32 - 50:35

Samruddhi Mokal Outskill: Also, if you're creating something locally.

50:37 - 50:44

Samruddhi Mokal Outskill: It is connected, it is still talking to different systems, right? Workflow is going to run locally, but one thing is, if your laptop is shut.

50:44 - 50:55

Samruddhi Mokal Outskill: it won't be running. So that is another drawback of having locally hosted things. So even if you're running locally, your laptop has to be always on to make sure that workflow is executing on

50:55 - 50:58

Samruddhi Mokal Outskill: on it or not. So, what you can do is you can...

50:58 - 51:04

Samruddhi Mokal Outskill: use Versal, or sorry, you can use, railway to host it, and...

51:04 - 51:07

Samruddhi Mokal Outskill: It will run on top of railway.

51:14 - 51:32

Samruddhi Mokal Outskill: I'm used to publishing NN after making a flow, so I can import it later using a different NN. Yesterday, the tutor said I need to ensure I put guardrails in my NN, so no one can access my work. How do I secure my NN? Please advise. Also, by default, downloading your NN workflows does not mean,

51:32 - 51:42

Samruddhi Mokal Outskill: others can use it, or even if you publish, that is still going to be in your system only. So there are multiple ways to add guardrails, so when you publish it.

51:43 - 51:50

Samruddhi Mokal Outskill: you'll get some checklists. So, N10 has inbuilt guardrails, so just click on that checklist, check those... all of those things.

51:50 - 52:01

Samruddhi Mokal Outskill: It will do that job for you, it will do some checkings for you by itself, and then publish it. Second is, for example, if you're adding some chat triggers, you can always add a verification step here.

52:01 - 52:03

Samruddhi Mokal Outskill: For example, let's go...

52:11 - 52:13

Samruddhi Mokal Outskill: Yeah, so you can add a filter node.

52:13 - 52:16

Samruddhi Mokal Outskill: Which will just filter out if this is a...

52:16 - 52:35

Samruddhi Mokal Outskill: text from you or not. So, for example, here I have added, this is my user ID. So, if this user ID matches only, then it will pass on further to my workflow. So, it also depends how you build your workflows, as well as how you, add other garterals that are already built in. But by default, publishing does not mean it goes to other people.

52:39 - 52:41

Samruddhi Mokal Outskill: Will we learn about

52:41 - 52:52

Samruddhi Mokal Outskill: using the partner benefits AI tools we got when signing up for the AIAP, for example, Happenstance, Lizer, or Super Grow, thanks in advance. And also, this is something that Sumed or Shasti will take up.

52:55 - 53:13

Samruddhi Mokal Outskill: Assume I have built an NN workflow and published it. How do I share with a friend so they can use... must all connections and Gmails be changed? What is the best practice? Thanks, Jeff. Okay. So, Jeff, whenever you create an workflow, what you can do is always download the JSON of this, and you can share the JSON. By default.

53:13 - 53:19

Samruddhi Mokal Outskill: sharing the JSON does not mean your credentials are going. So, all of the credentials are encrypted.

53:20 - 53:22

Samruddhi Mokal Outskill: So even if you share this workflow.

53:22 - 53:34

Samruddhi Mokal Outskill: These nodes will have some exclamation mark, red exclamation mark that you guys might have seen. So unless and until they add the credentials, it won't work for them, and they have to add their own credentials on their AND accounts.

53:34 - 53:53

Samruddhi Mokal Outskill: So all your credentials that you have added to your NATN workflows are safe, and they remain only in your NATN accounts. And also, NATN has different workspaces. For example, this is my project space, this is my personal space. The workflows

that I've created in my project and the credentials that I've added in my project are not even passed through personal workspace.

53:53 - 53:57

Samruddhi Mokal Outskill: So, they are just specific to your projects that you're creating inaden.

54:00 - 54:01

Samruddhi Mokal Outskill: Okay.

54:05 - 54:16

Samruddhi Mokal Outskill: Can only business WhatsApp be connected as trigger? What if you want to connect personal WhatsApp? Also, if you're using Meta's official APIs, or WhatsApp's official APIs, that allows only business WhatsApp.

54:16 - 54:20

Samruddhi Mokal Outskill: But, you can use... UniPipe.

54:21 - 54:27

Samruddhi Mokal Outskill: to connect your personal WhatsApp. So, Unipile is going to let you connect your personal WhatsApp, give you API keys of different,

54:28 - 54:32

Samruddhi Mokal Outskill: actions that you want to take on WhatsApp, I'm sharing a link of Unipile in the chats.

54:36 - 54:41

Samruddhi Mokal Outskill: Okay, so you guys can check out what is Unipile, that will help you connect with your personal WhatsApp as well.

54:43 - 54:46

Samruddhi Mokal Outskill: Can you show the API and MCP, like, how you showed webhook?

54:46 - 54:51

Samruddhi Mokal Outskill: Yeah, sure. So, APIs... So let's say these are your,

54:53 - 55:02

Samruddhi Mokal Outskill: Yesterday, you created meetings agent, so whatever you did in your HTTP request, that was what you saw in API documentation of Fireflies. So that is how you call an API endpoint.

55:02 - 55:10

Samruddhi Mokal Outskill: all of these services have different API endpoints. What endpoint means is, for example, this endpoint is supposed to just give you

55:10 - 55:18

Samruddhi Mokal Outskill: Transcript IDs. Another endpoint is just supposed to give you transcript of that meeting ID that you passed on to the next API call.

55:19 - 55:22

Samruddhi Mokal Outskill: So, one action means one API endpoint.

55:22 - 55:26

Samruddhi Mokal Outskill: And also, all the nodes that you see in your NH10 are API calls.

55:26 - 55:29

Samruddhi Mokal Outskill: Just, they are configured in a good node format.

55:30 - 55:36

Samruddhi Mokal Outskill: So all the nodes that you're creating here, where... which they are talking to different services or tools, are all API calls in the background.

55:37 - 55:41

Samruddhi Mokal Outskill: Now, coming to the... MCP's part.

55:42 - 55:44

Samruddhi Mokal Outskill: Let me show Jarvis for this.

55:50 - 56:00

Samruddhi Mokal Outskill: So think of it like you're Jerry only, but it has these capabilities. It has task manager, calendar meetings, finance manager, and Google contacts. So what you do is.

56:00 - 56:16

Samruddhi Mokal Outskill: You create these MCP servers, and also, guys, this is, usually I do it for the demo's sake, so all of these workflows are going to remain in separate NN workflows, or as separate NN workflows. For example, this is your master workflow, 1, 2, 3, 4, 5, 6. So these are 6 different workflows talking to each other.

56:18 - 56:25

Samruddhi Mokal Outskill: And what you do is, whatever tools that you added to your sub-agents yesterday, those get added to your MCP servers.

56:26 - 56:30

Samruddhi Mokal Outskill: And you connect those MCP servers to your master orchestrator.

56:31 - 56:34

Samruddhi Mokal Outskill: And whatever MCP servers you have created.

56:34 - 56:46

Samruddhi Mokal Outskill: You can also connect those to different workflows that you have created. For example, this is connected to Jarvis, but let's say some... I have Jerry as well. So this same MCP server can be used in multiple workflows.

56:50 - 56:54

Samruddhi Mokal Outskill: I have already shared the JSON of this, guys, so I'll share it once again.

56:59 - 57:00

Samruddhi Mokal Outskill: Yep.

57:00 - 57:02

Samruddhi Mokal Outskill: Sure is, though, Java swatlow.

57:03 - 57:06

Samruddhi Mokal Outskill: Whatsapp also I shared, I'll reshare WhatsApp again.

57:07 - 57:08

Samruddhi Mokal Outskill: This is, WhatsApp.

57:10 - 57:10

Samruddhi Mokal Outskill: All right.

57:11 - 57:15

Samruddhi Mokal Outskill: How do I use shared JSON files by you in N10? Alright.

57:22 - 57:24

Samruddhi Mokal Outskill: So, whenever you create a new workflow.

57:29 - 57:31

Samruddhi Mokal Outskill: You have this button called as Import.

57:31 - 57:36

Samruddhi Mokal Outskill: So, select import from file, and just import the workflow. For example, let me try one of this.

57:37 - 57:38

Samruddhi Mokal Outskill: Okay.

57:40 - 57:47

Samruddhi Mokal Outskill: So I just selected that file, and it got all my... all the nodes that I have shared in that workflow. So that is how you import the workflows.

57:53 - 58:10

Samruddhi Mokal Outskill: Can you share any communities on Reddit? So, Zaer, what I'll do is, I don't have all the name of the communities on top of my mind right now. What I'll do is I'll create a document with all the tools that I mentioned, including the links, including the communities, etc, and I'll share that with Shasti or Sumedha. They'll share it with you in your LMS.

58:17 - 58:20

Samruddhi Mokal Outskill: Any plans of teaching Hermes,

58:20 - 58:27

Samruddhi Mokal Outskill: Are there any classes planned for it? Also, this is, again, for Shasti or Sumedha. I don't know if Hermes is being taught or not.

58:31 - 58:36

Samruddhi Mokal Outskill: A little bit confused on NAT and workflow and Agentic system on Hermit, or...

58:36 - 58:41

Samruddhi Mokal Outskill: Audio platform, how to differentiate, explain example, okay.

58:41 - 58:49

Samruddhi Mokal Outskill: Also, NHNS... An automation platform, which helps you connect to different tools, And...

58:50 - 58:57

Samruddhi Mokal Outskill: You can also create Agentic systems on your annotants. For example, let's say you just have a workflow.

58:59 - 59:14

Samruddhi Mokal Outskill: In this case, assume AI agent is not there. There are certain workflows where you do not need AI agents. So let's take this part of the workflow. That is just automation. So you're just automating tasks where AI is also not required. So these are more like if-else statements, or if something happens, then you have to do this.

59:15 - 59:21

Samruddhi Mokal Outskill: So N10 lets you do that as well. And all of these agentic systems that you mentioned, Hermes or Ajay, etc.

59:21 - 59:26

Samruddhi Mokal Outskill: They are specially built to get trained on your data based on your actions that you do.

59:27 - 59:31

Samruddhi Mokal Outskill: In this case, En workflow does not learn by default if you are, let's say,

59:31 - 59:39

Samruddhi Mokal Outskill: what are my brand guidelines? What type of decks do I create, what is my branding tone, branding style, etc. But if you're using Hermes.

59:40 - 59:47

Samruddhi Mokal Outskill: It is going to see what actions you take, it is going to learn, and it is going to readjust itself based on what output suits you best.

59:47 - 59:51

Samruddhi Mokal Outskill: So that is the difference between antenn workflows or Agentic systems.

59:52 - 59:57

Samruddhi Mokal Outskill: And most of these Agentic systems on... behind are connected to MCP servers.

[01:00:00] - [01:00:13]

Samruddhi Mokal Outskill: How do I unpublish my workflow in Retail? Also, where you find the publish button, similarly, there you can find the unpublish button, and also, by default, even if you have created a voice agent in Retail, no one's going to access it.

[01:00:13] - [01:00:19]

Samruddhi Mokal Outskill: Because you have not connected any phone number to it, so you don't have to worry about unpublishing the workflows if you're not able to find it.

[01:00:23] - [01:00:27]

Samruddhi Mokal Outskill: Yesterday, the output from NATN had very programming interface.

[01:00:27] - [01:00:29]

Samruddhi Mokal Outskill: How can I better the interface?

[01:00:31] - [01:00:48]

Samruddhi Mokal Outskill: So NAT and... I'm not sure what type of programming interface you mean, but this is all your nodes. If you mean what you saw in logs, that is just help... that helps you create... keep track of all the different nodes, or what is the input of this node, what is the output of this node, so...

[01:00:49] - [01:00:55]

Samruddhi Mokal Outskill: That is required. If I'm misreading this question, just drop in the chat what exactly do you mean by programming interface?

[01:01:02] - [01:01:07]

Samruddhi Mokal Outskill: Sandeep, while creating a booking in retail, I got HTTP400 Axios.

[01:01:07] - [01:01:11]

Samruddhi Mokal Outskill: Error, bad request with response data showing email validation error.

[01:01:12] - [01:01:18]

Samruddhi Mokal Outskill: So that is because I think you gave a bad email ID, that is CAL's... how Cal does its API call.

[01:01:19] - [01:01:32]

Samruddhi Mokal Outskill: So, by default, it needs email, and it should be... it also does a background check. For example, you might also get this error for your phone numbers. So, if it is not in the right format, it will throw that error. How to fix that is, in retail, whenever you're testing.

[01:01:33] - [01:01:39]

Samruddhi Mokal Outskill: you'll see that a drop-down appears. What is the tool, if it has called that tool or not? And second, what is the tool result?

[01:01:40] - [01:01:57]

Samruddhi Mokal Outskill: So from where you got this right, copy this entire error, you might have got a big JSON in this, not just this part. So copy this entire JSON, give it to your cloud. That's how we also debug our workflows in our breakout room. So it will help you understand what type of error code this is, and how to resolve it.

[01:01:57] - [01:01:59]

Samruddhi Mokal Outskill: So, one way is you can just

[01:01:59] - [01:02:03]

Samruddhi Mokal Outskill: Make sure your prompt is in a certain way, that someone passes this information in.

[01:02:03] - [01:02:11]

Samruddhi Mokal Outskill: creates a specific type of format while passing it on to the API call. That is how you can format your prompt, or you can just ask your

[01:02:11] - [01:02:15]

Samruddhi Mokal Outskill: people, email IDs, etc, in a specific format.

[01:02:18] - [01:02:26]

Samruddhi Mokal Outskill: How would we turn Jerry from a classroom prototype into a reusable, production-ready system for small business clients?

[01:02:27] - [01:02:36]

Samruddhi Mokal Outskill: With clear agent roles, secure data access, human approval points, shared memory, and failure handling, and which parts should be run in N10 versus the backend.

[01:02:37] - [01:02:42]

Samruddhi Mokal Outskill: Also, in this case, You can run everything in NATM, but

[01:02:43] - [01:03:00]

Samruddhi Mokal Outskill: since you're creating it for other clients, if you want to store something, then you'll have to store the data in the backend, whatever backing system they are using, whether it's Supabase, whether it's AWS, or anything. So, all of these nodes are already there in NN. And also, this is a very broad question.

[01:03:00] - [01:03:10]

Samruddhi Mokal Outskill: What agent roles, you will have to define it. Like, how we created first is, first step is always create the flowchart. Without the flowchart, you won't know. And if you're creating a very...

[01:03:10] - [01:03:28]

Samruddhi Mokal Outskill: long workflow, use a similar format that I showed for Jarvis, like, there are... if there are hundreds of different connections, just create MCP servers of those... for those clients, secure those MCP servers, and then connect those MCP servers to your AI agent. So that will do your security part as well. And for human approvals, there is no called as human in the loop.

[01:03:29] - [01:03:38]

Samruddhi Mokal Outskill: Add that human in the loop, and send the data for approval to a specific person in the team, so you can redirect that data while configuring the node to whom it has to be sent.

[01:03:39] - [01:03:41]

Samruddhi Mokal Outskill: And create the workflows accordingly.

[01:03:44] - [01:03:58]

Samruddhi Mokal Outskill: I was able to do the... go to the end of yesterday's class, but when test run was tried, I have an error, not sure how to proceed, error message 400, your input exceeds the context window of this model. Adjust your input and try again.

[01:04:01] - [01:04:08]

Samruddhi Mokal Outskill: So it seems, your context window, all you, all of you know what is context window, so if you're using a certain model.

[01:04:08] - [01:04:21]

Samruddhi Mokal Outskill: And if you're giving it a context which is way higher, it won't do. So what you can do is, I don't know what type of model you used, but take help of NN's AI assistant. The best way is, guys, help... take help of this NHN's AI. So, for example, if I go to this...

[01:04:23] - [01:04:25]

Samruddhi Mokal Outskill: It will automatically start reading this workflow.

[01:04:27] - [01:04:51]

Samruddhi Mokal Outskill: And you can debug your workflow, so it can take actions for you. I can tell it I'm facing this error. You do not even have to tell it. It will by default understand, okay? For example, if there was an error in this, it would have by default understood and told me, okay, this node is having this error, do you want me to resolve it or not? So just tell it, I want you to resolve it. It will also give you steps on how to do it, and also, if you ask it, that can you sort it for me? It will also take action on your behalf, and

[01:04:51] - [01:04:54]

Samruddhi Mokal Outskill: Do those settings in your NN workflows.

[01:05:04] - [01:05:07]

Samruddhi Mokal Outskill: Or can you help us on... on to see a WhatsApp?

[01:05:07] - [01:05:20]

Samruddhi Mokal Outskill: MCP trigger for demo for Jerry. So WhatsApp is a node. MCPs you cannot add directly as trigger nodes. MCPs are somewhere in between, that is called as MCP client. MCP trigger node, if you mean,

[01:05:21] - [01:05:35]

Samruddhi Mokal Outskill: like Jarvis, if you want to create an MCP trigger node and add different tools of WhatsApp, you can do that using nodes that are already there. So, WhatsApp node, you'll be able to find in it, and so just add those nodes to your MCP triggers.

[01:05:35] - [01:05:38]

Samruddhi Mokal Outskill: But one thing is, if you are creating

[01:05:38] - [01:05:41]

Samruddhi Mokal Outskill: WhatsApp MCP, and if you're using

[01:05:41] - [01:05:45]

Samruddhi Mokal Outskill: WhatsApp's official APIs, you will only be able to connect to your

[01:05:45] - [01:05:48]

Samruddhi Mokal Outskill: Business account, so you will have to

[01:05:48] - [01:05:54]

Samruddhi Mokal Outskill: see what... what you want to do. If you want to use a personal WhatsApp, then switch to Unipile and create MCP server for Unipile.

[01:05:57] - [01:06:03]

Samruddhi Mokal Outskill: I would like to start using Jerry in my day-to-day work. We only engage with it from the chat in Enn.

[01:06:05] - [01:06:07]

Samruddhi Mokal Outskill: What do we use as the weight

[01:06:08] - [01:06:11]

Samruddhi Mokal Outskill: To use it... to use it On a daily basis.

[01:06:12] - [01:06:16]

Samruddhi Mokal Outskill: Connect it to Claude, use a website, etc. So you can...

[01:06:17] - [01:06:31]

Samruddhi Mokal Outskill: use... let's say you can use your WhatsApp, you can use your email, you can use whatever software or tool that you use on day-to-day basis. So, it varies from people, different people to people. Some of them use Telegram very regularly, some of them use WhatsApp, so just switch your trigger notes

[01:06:32] - [01:06:38]

Samruddhi Mokal Outskill: So this is what you have to do. Just switch your trigger notes to different tools that you want, and it will take the input from it.

[01:06:38] - [01:06:41]

Samruddhi Mokal Outskill: And also, you can have multiple triggers if you want.

[01:06:42] - [01:06:52]

Samruddhi Mokal Outskill: So if you want to send the data to your Jerry in... through multiple tools or softwares, you can have multiple trigger nodes. And you can also definitely build a website, but for website, you will have to start the workflow with

[01:06:52] - [01:06:57]

Samruddhi Mokal Outskill: Webhook trigger, and it will take the data from your website, and do it.

[01:07:00] - [01:07:08]

Samruddhi Mokal Outskill: Nazeer, I'm struggling to map my Google Sheet fields with NIDN fields. Can you demo the steps for dragging the Google Sheet fields in...

[01:07:08] - [01:07:10]

Samruddhi Mokal Outskill: To an attendant feels okay.

[01:07:17] - [01:07:20]

Samruddhi Mokal Outskill: Let's take... I think this was one, right?

[01:07:25] - [01:07:27]

Samruddhi Mokal Outskill: I'll have to execute this once to...

[01:07:32] - [01:07:34]

Samruddhi Mokal Outskill: Company name...

[01:07:39] - [01:07:40]

Samruddhi Mokal Outskill: And submit it.

[01:07:43] - [01:07:50]

Samruddhi Mokal Outskill: Yeah, so right now, I'm facing this error because my API key is old API key, which was expired. Let me switch to my account.

[01:07:58] - [01:07:59]

Samruddhi Mokal Outskill: All right.

[01:07:59] - [01:08:04]

Samruddhi Mokal Outskill: So, what you have to do is, you can see what submissions you got in the form.

[01:08:05] - [01:08:11]

Samruddhi Mokal Outskill: And if you go to the input section of a specific node, what you can see is all the previous node executions.

[01:08:11] - [01:08:15]

Samruddhi Mokal Outskill: So what is the output of all the previous nodes is available as the input of the next node.

[01:08:16] - [01:08:22]

Samruddhi Mokal Outskill: And if you're not able to see the specific output, just click on this arrow, it will show you all the details of what happened in that mode.

[01:08:23] - [01:08:26]

Samruddhi Mokal Outskill: So in this, what you ought to do is, let's say I don't have this.

[01:08:29] - [01:08:31]

Samruddhi Mokal Outskill: Drag and drop this field here.

[01:08:32] - [01:08:50]

Samruddhi Mokal Outskill: And as soon as you add your document or sheet, it will automatically fetch what are the column names that you're given. The values is something that you have to drag and drop, but column names, you have to first add it to your sheet, only then it will fetch it, and it will automatically fetch it so that you can add the data or pass on the information to those specific columns.

[01:08:56] - [01:09:09]

Samruddhi Mokal Outskill: In the workflow, you showed the contained MCPs. They did not show connectors with the agent. How does it work? So they are connected using MCP client. I'll show that again. They are already connected, I...

[01:09:10] - [01:09:11]

Samruddhi Mokal Outskill: I'll show it again.

[01:09:16] - [01:09:25]

Samruddhi Mokal Outskill: So, in N8, there is no something called as connectors, what you see in ChatGPT, like plugins or connectors in your cloud. The node that you have to add is

[01:09:25] - [01:09:37]

Samruddhi Mokal Outskill: MCP client tool, so if I click on this Tools Plus button, you'll see something called as MCP Client. So use this MCP Client Tool. In this, you have to add your MCP server URL, and it will connect to your MCP servers.

[01:09:44] - [01:09:57]

Samruddhi Mokal Outskill: How do we view the workflow you just shared? Can we view it on NN? So what I shared with you guys is the JSON. So you can import that JSON on your NN accounts, add the credentials, and you will be able to make those workflows work.

[01:10:00] - [01:10:05]

Samruddhi Mokal Outskill: The Jarvis you showed, was it similar to Jerry, and built Similarly, but did you just...

[01:10:05] - [01:10:10]

Samruddhi Mokal Outskill: change Jerry to Jarvis and added MCPs. So this is something similar to Jerry, I...

[01:10:11] - [01:10:15]

Samruddhi Mokal Outskill: I did not create first Jerry, I was... I have first created Jarvis, so...

[01:10:16] - [01:10:34]

Samruddhi Mokal Outskill: It is something similar, but it has Google Contacts, it has Task Manager, and it has a financial one. And it also has one thinking part, like, if I think some task is complex, it passes it on to this thinking tool so that the response is more comprehensive, or there is more thinking involved for that specific task. And it takes the...

[01:10:35] - [01:10:40]

Samruddhi Mokal Outskill: input from Telegram, both the inputs, that is text and audio, and it also

[01:10:41] - [01:10:47]

Samruddhi Mokal Outskill: sends a message, okay, this task has been done, or this is the update on these specific tasks. So it also replies to it.

[01:10:53] - [01:11:00]

Samruddhi Mokal Outskill: How do I download the JSONs? So I think, guys, that is already there in your charts. If you click on that, it will get automatically downloaded.

[01:11:08] - [01:11:20]

Samruddhi Mokal Outskill: Can you please share the WhatsApp JSON again? I was unable to download the previous one. Also, how do we use the JSON in 10? Also, how do we use the JSON in Anton? I already showed, I'll repeat this again, and I'll also share the

[01:11:20] - [01:11:29]

Samruddhi Mokal Outskill: two JSONs that I shared, so if you click on these three dots, click on import, and you can select this import from file, and it will take it from, from your systems, yeah.

[01:11:33] - [01:11:34]

Samruddhi Mokal Outskill: Alright.

[01:11:35] - [01:11:44]

Samruddhi Mokal Outskill: Okay, guys, I'll hand it over to Shasti at 7 o'clock, so we'll take the rest of the questions tomorrow. And I'll share the JSONs again for whoever has missed it in the chats.

[01:11:54] - [01:11:55]

Samruddhi Mokal Outskill: Yep, here are the JSON files, guys.

[01:11:58] - [01:11:59]

Shasti: Yep.

[01:11:59] - [01:12:10]

Shasti: With that, we are done with day 8 of our office hours, everybody. I hope this was helpful. Thank you so much, Samrati, for all those wonderful answers, and also for sharing the resources.

[01:12:10] - [01:12:19]

Shasti: Folks, if you're, missing it here in the chat, do not worry about it. We will also add this on, Office Hours resources on your LMS, so you'll be able to find it over there.

[01:12:20] - [01:12:25]

Shasti: With that said, thank you so much, Samriti. I'll let you go, and we'll see you in our further sessions.

[01:12:26] - [01:12:27]

Samruddhi Mokal Outskill: Thank you, everyone.

[01:12:28] - [01:12:29]

Shasti: it.

[01:12:30] - [01:12:36]

Shasti: With that, folks, we are done with day 8 of our office hours, and we will have a 30 minutes break now.

[01:12:36] - [01:12:59]

Shasti: And we will connect back again at 7.30pm IST, where we are gonna have a session on how you can build a lovable front end for any of the NATEN workflows that you have built, and you can connect your NATEN backend to the lovable front-end. This is what we are going to learn in our main session, which starts at 7.30 PM IST. Yes, the link remains same. You can go to your LMS,

[01:12:59] - [01:13:02]

Shasti: Click on live sessions, and you'll be able to join from there.

[01:13:03] - [01:13:08]

Shasti: With that said, thank you so much for making it live to our officers. I'll see you guys in the next 30 minutes.
