

Pre-Reads

14-Day AI Accelerator Program

Pre-Read IV

Session Name:

Building a Customer Support Agent with n8n

Table of Contents

Chapter 1: What You Will Learn

- 1.1 Introduction to AI Customer Support Agents
- 1.2 Tools Covered in the Session

Chapter 2: Prerequisites

- 2.1 Tools You Will Use in This Session
- 2.2 Basic Knowledge and Familiarity

Chapter 3: Key Takeaways Before the Session

- 3.1 What to Expect in the Session
- 3.2 Summary Checklist

Chapter 1: What You Will Learn

1.1 Introduction to AI Customer Support Agents

In this session, we will explore how to build a customer support agent that can:

- Automate responses to common customer queries (like returns, refunds, and order tracking).
- Use **AI-driven logic** to generate accurate responses based on customer emails.
- Integrate with **n8n** to automate workflows and streamline the process.

1.2 Tools Covered in the Session

You will use the following tools to create the customer support agent:

- **n8n**: A no-code platform for automating workflows and connecting different services.
 - **OpenAI**: A language model used to process customer queries and generate responses.
 - **Pinecone**: A vector database used to store and retrieve data for accurate responses.
 - **Gmail**: For receiving and sending customer emails, enabling the agent to interact directly with customers.
-

Chapter 2: Prerequisites

2.1 Tools You Will Use in This Session

Before the session, you will need to sign up for the following tools to make sure you can follow along:

- **n8n**: This is where we'll build the automation workflow to integrate all the tools.
 - **What to do**: Create a free account on [n8n](#). Once logged in, you'll be able to create and run your workflows.
 - **Step 1**: Visit [n8n Sign Up](#).
 - **Step 2**: Click on **Sign Up** and register with your email or Google account.

- **Step 3:** Once signed up, log in to access the **n8n Dashboard**, where you will create workflows.
- **OpenAI:** OpenAI's language models will be used to generate responses for customer queries.
 - **What to do:** Sign up for a free account at [OpenAI](#). You'll use their models to process the customer queries during the session.
 - **Step 1:** Go to [OpenAI Sign Up](#).
 - **Step 2:** Click **Sign Up** and register with your email or Google account.
 - **Step 3:** Log in to your account. You're ready to use **OpenAI's language models** for processing customer queries.
- **Pinecone:** This is a vector database that will help us store policy information for quick retrieval.
 - **What to do:** Create an account on [Pinecone](#). You'll use it to store the customer support data, like policies and FAQs.
 - **Step 1:** Visit [Pinecone Sign Up](#).
 - **Step 2:** Click on **Sign Up** and create an account with your email.
 - **Step 3:** Once logged in, you can create your first **project** and **index** for storing data.
- **Gmail:** Gmail will be the platform through which our agent communicates with customers.
 - **What to do:** Ensure your Gmail account is active. We'll integrate Gmail with n8n for email processing.
 - **Step 1:** Visit [Gmail Sign Up](#).
 - **Step 2:** Create a free account or log in to your existing Gmail account.
 - **Step 3:** Make sure your Gmail account is ready for integration with **n8n** (instructions for this will be covered during the session).

2.2 Basic Knowledge and Familiarity

- **No coding skills required:** You will build everything using **n8n's no-code interface**.

- **Familiarity with basic customer support scenarios** (like return policies and refund requests) will help you better understand how the agent works.
-

Chapter 3: Key Takeaways Before the Session

3.1 What to Expect in the Session

- **Hands-on learning:** You will create the AI customer support agent step by step, using the tools mentioned above.
- **Workflow building:** We'll use **n8n** to automate the agent's tasks, like receiving emails and generating responses.
- **Real-world application:** The AI agent will be designed to solve a **customer service problem**, such as handling support tickets.

3.2 Summary Checklist

- **Sign up for n8n, OpenAI, Pinecone, and Gmail.**
- Be prepared to learn how to **automate customer support** tasks using **n8n workflows** and integrate **AI** for generating responses.
- **Familiarise yourself** with the idea of automating tasks and responding to customer queries efficiently.
