

AIAP C14 Day 1	
Question	Answer
Hi Daily session invite is not getting updated . hence hv to struggle to join	Hey you can check your calender, you will get the invite blocked!
what is the best way to keep track and take notes. I thought the workbook was for all of it and was thinking we would have it from the beginning to follow along and take notes	You will get the session transcript. You should use AI to make notes!
? What tools will we need today?	
I am not able to get access to tools. Wrote several times to support.	email id please
They haven't switched me to C14 EST. When will they complete that? Note: I treid signing out and back in, closing the browser etc.	This is needed for the first weekend only. All other sessions are common for all. If you have filled the form, you will be switched before the weekend.
Can we hve a 10 minute braek to use the restroom each hour? I am 67 and nature calls once an hour!	Jeff, we generally have one break between the training and the start of breakout rooms where you get to practice what you learn. Expect wach of these to last 2-2.5 hours.
Hello, I'd emailed support@outskill.com on Sep 12, Saturday to switch me from C14 IST to C14 EST. Can you let me know when that will occur. I live in the US & cannot join Sep 19 and 20 on IST. My email is tmattapalil@yahoo.com Thanks, Thomas Mattapalil	team is looking into it, we will get back soon
why cant the students switch on their camera. why is it disabled. it would be more engaging	As this is a class, zoom only allows this for hosts and panelists, so your trainers only.
When dileep will start the session ?	We are starting now
Share the whats app link to access the resources	Hey, please check your email. You must have recieved a mail regarding booking a 1v1 call with our team. Please bookthe slot and our team will make. sure your issue is resolved.
difficult to follow. sound is awful	Please do check your connection, as the sound is clear for almost everyone.
When you say use AI to take notes. What do you mean by that? Which AI to be used and if you are going to share the transcript still its advisable to use any personal AI tool?	You can try fireflies ai which joins and records your meetings automatically
do we need paid chat gpt and claude for all this?	No for this session, subscriptions are not required.
I am not able to get access to tools. Wrote several times to support. This is the message I get: "You do not have access to any tool yet. Please book your 1v1 onboarding call with our team below. I already have both booked 1v1 call and emailed to support@outskill.com. But since current days can't be selected I booked on 16th.	Hey, please provide your email id here.
my end everything is fine. 500 mbps net speed.	Sorry Vemuru, but we don't see anyone else mentioning this.
purushottam.rijal@greenwind.edu.np	asking them to check but if you have booked your onboarding call for 16th, please do take up the call and team will help you.
I couldn't access the session from my laptop and am using my mobile instead. is that a problem? I have my laptop in front of me though	Yes, you might face problem seeing the contents of the screen. so make sure to restart your laptop and join from your laptop.
Is Breakout room and Transfer to Room is same?	
what do you want me to do	
where do i find the break out room, i am on zoom app	You will be automatically assigned to it when we do the breakout rooms - at the moment we are all in the main session :)
I'm trying to gain someone's attention support + Shasti. An unavoidable conflict came up that overlaps several days. I read there is an October cohort I am asking if I can defer to then.	Hey Lisa, if you would perefer moving to october cohort, please do write to support@outskill.com and team will facilitate the same!
continues to be very poor sound	I would suggest checking your zoom audio level settings - the audio is fine on my side, sometimes zoom changes audio settings automatically
first time seeing you	
right - thanks	
Dileeps image is not showing. only his voice.	Video is fine on my side, are you using the zoom app or the website?
where can I get the what's app link ?	Under welcome steps in LMS
Hi Hansika, like Purushottam Rijal, I scheduled a 1-1 for tomorrow as the first day and do not have access to tools. lisa@adaptgc.com	Hey Lisa, Ive updated my team regarding your issue. Team is working on it and it will be resolved soon.
How to learn what ai is good at what. like chatgpt might be good at something. perplexity might be good at something etc. How do we find out fast.	The only way to truly understand capability, which also changes constantly, is to use them and then land on the ones which work best for you. This is not static, and it is not the same for everyone.
@Shasti I have emailed them and followed up with no reply yet. I'm here so in case they say no. :) I'll continue waiting for their response.	Will ask the team to check. Apologies for the delay! but do not worry- we will make sure that you will be moved to october cohort
This is horrible - his voice keeps breaking up. Wont learn anything unless this improves.	Hey Roger, Dilip's voice is not breaking. Please make sure your network is working properly and try rejoining.
Thank you	
I tried to schedule an onboarding call and it comes back rejecting me for some reason.	Hey Chris, so sorry to hear that. Please share your email ID here so that we can resolve this issue from our side.
Data privacy when using all these models and linking all other apps via plugins... is data private..?	Hey Eugene, we'll be learning about all this in the later sessions so stay tuned.
cmateya@aol.com	
i also need to schedule my onboarding and tool access, douglasjwilliams@yahoo.com thanks	Hey Douglas, We have noted your email ID and have shared it with our team. You will be updated about it soon and we'll get it resolved.
never	
when model is not well trained	
scripting and email, no credible information data	

which AI do you recommend to take notes? This is Day 1 :)	https://wisprflow.ai/
How long it takesfor recordings to be be posted on LMS portal? When will today's recording be available?	Hey, it will take 12 hours.
I have reset several times. have plenty of bandwidth.	Maybe try join on your phone for audio as a second device purely for audio
ah but i have to hold down ctrl + win manually ??	You can use fireflies which joins the meeting automatically and records :)
brilliant - got it working! :)	
duration of the session?	Typically, learning will last between 4-5 hours.
fireflies next time :)	
thanks	
I saw wispr flow recommended for taking notes, but this is what I get when I click Notetaker on its UI :-{	Id suggest trying a different note taker eg fireflies or granola etc
I saw wispr flow recommended for taking notes, but this is what I get when I click Notetaker on its UI :-{	Meeting notetaker - fireflies is more accomodative
? What tools will we need today?	You need to create a free account on Asana and Gamma.app.
"Notetaker is coming soon!	
Our new meeting notetaker tool will become available on Windows soon."	Maybe Try fireflies or granola :)
i still don't understand the difference between context engineering and prompt engineering. i already give context in my context; so what's the difference?	live answered
i still don't understand the difference between context engineering and prompt engineering. i already give context in my context; so what's the difference?	Prompt engineering focuses on how you phrase the specific task or question you want the AI to answer right now. Context engineering focuses on curating and structuring the surrounding environment such as background background files, references, dynamic guidelines, and history, that the AI uses to inform that answer.
Its resolved. I redeemed for Lyrz and Multi for now. Thanks.	
Thanks Luca, will try Fireflies a little later!	
Hi Lisa, For me, I had tried login with different email, that's why I failed before. I had already attented the onboarding call.	
@Ritesh, Pls provide link. I accidentally closed the tab.	https://asana.com/ and https://gamma.app/
Is brief framework similar or different from ART framework that was discussed in other classes?	Both are ways to structure a clear prompt; the exact differences depend on how BRIEF and ART were defined, so focus on making the task, context, and expected output clear.
thx	
hi Hansika, i already booked 1v1 session on 16th. please provide me the access of all the tools and need whatsapp link too.	Hey Suman, you can find the WhatsApp link to the group under the welcome steps in LMS.Also if you haven't got any access to the tools, you'll have to reach out to support@outskill.com.
What is "alignment" engineering? Had seen it in some AI news last week	Alignment engineering is the practical work of making AI systems reliably behave according to human intent, safety rules, and product requirements—not merely follow instructions in a literal or exploitable way. It sits within the broader field of AI safety.
Do we get the transcript of each session?	you'll get the full recording & the transcript in your LMS, a few hours after this session
Giving example to an AI as context. It locks it respond around that example only.	
where to download the recording	Recording is not downloadable, but can be viewed on LMS
If I am working in a project and want guidance from mentors, then how could I get the mentorship?	
Those don't appear in the list in the LBS	
If we do not have any finished example to show to AI, what do we do?	you can describe how the finished example will look like, but it is still recommended to use real/approximated results or expectations
Once we show the example do we update the skill also Dileep ?	Yes, you can tell AI to update the skill for you
Hi, I dont have access to the AI tools I have 1v1 setup for tomorrow	
we dont have pro version of claude how will i practice	The workbook can be done on free version
can we use the same thing on chatgpt for the exercise which you are doing in claude?	Yes
Can you provide a clear distinction between Chat and Cowork?	Chat is where you think with Claude. Cowork is where you delegate to Claude.
will we need to purchase a license for cowork	You're right — Claude Cowork requires a paid plan. Cowork is only available on paid Claude plans (Pro, Max, Team, Enterprise), not the free plan.
But cowork is avaialbe only for paid subscription	You're right — Claude Cowork requires a paid plan. Cowork is only available on paid Claude plans (Pro, Max, Team, Enterprise), not the free plan.
What is the equivalent of cowork in ChatGPT if it is available?	chatgpt work mode
?	
if we use a free claude plan, there is no access to cowork correct?	yes, free plan doesn't allow you to use cowork
thanks Sandesh! but i used to do this and even provide examples when possible. I put the role, task, complete context, guardrails, examples. is that context engineering?	What you were doing is advanced prompt engineering : packing all rules, examples, and background text into a single prompt box. Context engineering is designing the underlying system so the AI automatically accesses the right background information from external sources without you having to manually paste it all into your prompt. Putting roles and examples in your prompt optimizes a single task run, while context engineering ensures the AI stays continuously informed by live, updating sources across many tasks.
how do you figure out which model of claude to be used?	if you are on the paid plan then you can use opus for 99% of tasks, for very hard tasks you can use fable - if you are on the free plan you will need to use sonnet 99% of the time otherwise you will run out of credits
Does working in Cowork consume extra tokens? Or we can keep using under our subscription?	you can use it under your normal subscription & it uses thesame limit that your chat uses

Do we have coupons that upgrade us to pro for both Chat GPT and Claude?	
What is a Hackaton ?	competition to build products or solutions for your ideas
For Claude cowork one needs a paid plan	Yes, this needs a paid plan. You can also do this on ChatGPT.
pl show how to use whisper flow with Claude	it automatically works on anything on your pc once installed - you just need to set up the shortcut of what buttons you want to press to activate it
Claude Cowork, is not for free accounts	Yes, you would need a paid account for this,
Why use Wispr Flow instead of inbuilt microphone for simple talk to text?	As you will see, Dilip will also be using it to add multiple parts of the prompt as well as use it in other apps where no mic is inbuilt.
For the voice to text option is it like a start and stop or does it just auto write?	it allows you to press any key that you've set on your system, for example, a fn key & once you hold that it records your audio, once you leave it, it pastes your recorded audio
what about coding tasks. the brief structure will change right. We won't have audience in that case.	The coding tasks will become part of the same brief, as the overall purpose remains getting traction for the business
Do we run the mock up simultaneously on our systems as Dileep? or the recommendation is just to watch right now	Please just watch. Almost all sessions will have breakout rooms where we mentors will work with you to help you practice everything you learn.
can dileep give demo also on free version	
How is wisperflow different from already inbuilt voice tools in openai and claude	It works everywhere, not in one app. OpenAI and Claude voice work only inside their own window. Wispr Flow types into any text box on your machine: Gmail, Slack, Notion, ChatGPT, Claude, your code editor. One tool, every app.
where you turn on the mic? I couldn't see.	Dilip is using wispr flow for dictation.
Which tool is Dileep using for voice to text conversion?	whispr flow
how is he doing text to word	Using Wisprflow
Thanks.	
What is the difference between chat and cowork ?	Claude Chat is a simple conversational assistant that answers questions turn-by-turn, while Claude Cowork is an autonomous agent that directly takes action on your computer files and apps to complete entire projects independently. Select Claude Chat for quick single answers, editing a brief snippet of text, or brainstorming ideas in real time. Select Claude Cowork when you need multi-step folder management such as organizing dozens of raw files into subfolders or automatically building a formatted spreadsheet out of local documents.
what is whisper flow	Its a voice note taking app, can integrate with coding tools like claude, codex, chatgpt, etc
Mine Free Claude version does not show "Cowork" option. Do we have to purchase it separately?	Paid plan is needed for Cowork
Is there a framework for "Context" - it can mean different things for different people? what should it include to make the brief more effective.	A practical framework for context uses the C.O.R.E. model—Context (background), Objective (goal), Role (persona), and Expectations (formatting and constraints). Structuring context through these four elements ensures the AI has complete clarity without receiving unnecessary noise. Template-Based Briefs: Build your prompts using the C.O.R.E. structure to consistently get accurate results on the first try. Iterative Refinement: If the AI produces a generic answer, update your brief by adding specific constraints to the "Expectations" section rather than rewriting the entire prompt.
The Claude interface allows voice input too. Why not use the Claude's microphone?	It consumes claude credits, which tend to be more expensive
Luca, Fireflies is giving me only 7 day trial and wants my credit card. How do I apply Outskill coupon for a year's access?	Please email support@outskill.com they can assist you in regard to tools :)
instead of using cowork, can i do the same thing on codex? does it work the same way?	yes, very much similar
can you repeat the last part about the memory?\	
team - can you please share the complete brief including the constraints	
What is the difference in using Claude chat and Co-work ? Is there any use case you recommend? Also how is the token utilization between Claude Code and Claude Co Work?	Chat is like asking a colleague a question and getting an answer back — you stay in the driver's seat, message by message. Cowork is like handing a task to an assistant and walking away — you say "organize these 200 files into a quarterly report" and it goes off, opens files, edits them, and comes back with a finished result. Think of Chat as a phone call — one question, one answer. Code and Cowork are like sending someone to run errands all day — every stop (reading a file, editing it, testing it, re-checking it) adds up, even though you only asked once.
How would you define constraints?	Constraints are the limits your solution must respect, such as budget, deadline, available tools, required format, or things it must avoid.
On the right hand panel I see Outputs and Context. When do we use that as opposed to typing it directly into the chat?	These are autogenerated by Claude Cwork as you work with it.
Oh I see. Thanks.	
? Are we using Claude today?	Chatgpt for breakout room
You should provide advance course notes to work with to make this effective...this lesson seems to have no structure...worse with bad audio quality,	Hey Roger, as we mentioned earlier- the 1st 2.5 hours are for learning which means not to do it along with the mentors. We will do hands-on in breakout rooms. Audio is good from our end, please check your system settings once
so we cant try things unless we buy subscription on claude n in future other apps also bcos these options r available in paid versions only	You can practise giving briefs and refining answers in free Claude chat; Cowork requires a paid plan, and each other tool has its own free features and limits.
From where Claude giving answer. And it is so instant.	Claude generates replies using patterns learned during training and the context you provide; tools such as web search can add fresh information. Specialized servers generate and stream the response quickly.
aha i see. so for ex i write it only once for the project i'm working on and ask it to use this info for all prompts within the project scope? how about single chats?	Put reusable background in Project instructions or knowledge so it is available across chats in that project. For a standalone chat, include the relevant context at the start and update it when needed.
What tool is he using now?	This is Claude Cowork.

I was late what is hackathon?	He is using the hackathon as an example to cover the concept of prompting
can we use simple daily use examples instead of such hi fi ones as we r all at very basic levels and to understand things daily use examples n simples ones wud b better	
Do we need to have pro version of claude?	For today's workbook, we're using ChatGPT. For what dileep is showing you with claude, you can use the free tier but you'll probably run out of credits fast so the pro tier would be best.
is it possible to update the earlier prompt to save tokens	A shorter revised prompt can reduce future context, but editing does not refund tokens already used, and generating a new answer uses additional tokens.
Ritesh, Fireflies is giving me only 7 day trial and wants my credit card. How do I apply Outskill coupon for a year's access?	Please reach out to Outskill for help with the tools. But ideally, you will have to go to the purchase page, select the annual plan, there you should get a place to add a code which will reduce the price to zero.
Did I understand correctly that we can ask the model to ignore the memory for a particular prompt?	yes
shubham.dwivedi9756@gmail.com I have been trying to reach out to outskill from past 4 days and sent multiple emails but got no response regarding supergrow ai subscription Can you please see that it is replied to	
Do we need to be on video for the breakout rooms later?	no
i am not able to activate wispr flow- through the coupon code - i dont have vpn -	Please contact support@outskill.com for assistance :)
how many tokens it will take for these initial conversations? should we check that?	You generally don't need to keep track of tokens. But you can go into settings to track your overall usage and how much usage you have left.
Can you provide some additional examples of when that might be a useful technique?	If you mean asking AI to restate its understanding, it helps with a travel plan that has budget limits, a client proposal with specific requirements, or an email that needs a particular tone.
Shall we install it ?	
Any other apps needed outside of Gamma and Asana? For tomorrow?	no
Am I online. My Question not answered please	Hi Gamel, Will answer your question shortly :)
voice is echoing	
Is the answer from the Data in the internet. Or provide the answer of is brain?	Combination of both
is this parallel search connector?	Yes, the connector shown in Claude's side panel is Parallel Search.
What happens if we type the loops along with the Goal, context and Audience prompt in ne go as opposed to doing loops?	Designing loops well can't be done in one prompt. You need to track how AI is behaving, what you need, how to improve prompts, etc for loops to work well.
In claude cowork - can i change the model in the same chat from sonnet 5 to something else in the middle of the conversations i.e after a few outputs?	yes you can in cowork, chat, code, design everywhere
What was the original goal?	to propose and win proposal hackathon for OpenAI
Can you give a demo for a parallel search also please	
this process will take lot of tokens, rather going with simple prompt. is this really necessary I understand the hallucination but how important is it??	it is, a structure is always better than just going in haywire, this prepares you better for more complex tasks
IS that in Lyrz ?	The workflow being demonstrated is in Claude Cowork.
If I am working in a project and want guidance from mentors, then how could I get the mentorship?	
i didn't understand loop 2	Loop 2 is where you fix remaining assumptions and ask AI for evidence both supporting and challenging each option, so you can compare the options before choosing a plan.
thx a lot	
Is the improvement loop helpful even if you don't review all of the context it provides to you? Or do you need to spend time on all of the output?	you definitely need to spend time on the output, otherwise this is of no use
I see a connector called Parallel search is it needed ?	No, that is not needed. You might be confusing it with Perplexity search.
Thank you	
This is brilliant. I will be using it tomorrow for our business planning process!	Yes, this can be extremely powerful!
Dileep is asking the current model to validate the answer and to identify facts vs inference, etc. I thought it was better to have another model validate the information.	Yes, you can have another model validate it
You have given prompt but as a new learner atleast to understand the concept will also be challenging	Start with a simple task, such as drafting an email: tell AI the goal, who will read it, and the relevant background, then review its draft and ask for one improvement at a time.
Overall 3-Loop Summary: Loop 1 – Correct assumptions + make AI repeat back its understanding Loop 2 – Minor corrections + ask for hard facts supporting and opposing the direction Loop 3 – Label every claim as confirmed/inferred/unknown to avoid hallucinations	Correct :)
won't this eat up more credits faster?	It will eat credits, but at the same time, it is giving you something that is well researched and follows a structure. It will give you the final output based on that structure, rather than in a normal, haywire way.
Instead of working in Chat, should we start working in Cowork anyways?	Yes, that would be best although in some versions of claude they have merged them into one
What is marked down?	mark down is a file format e.g. filename.md its basically a text format that AI understands better
What is markdown?	Markdown is like html which basically allows AI to understand formatting, emphasis, etc.
what is hallucination?	to make assumptions or create some content on the fly, without any real basis
cant we create a workflow that it automatically does all the loops and add it in the first prompt? do we need a Human Overlook at the basic of steps?	you definitely can make that but initially it won't be perfect since that will lead to a lot of confusion and hallucinations. you'll end up wasting a lot of tokens and compromising on the quality of the output. you have to work again and again on a specific workflow to make it reach a certain level where no human oversight is required, on the first attempt that's definitely not possible.

can I activate wispr flow without vpn using coupon code , previous question is not answered yet. else how do i get a vpn	
But even when the AI scans the Internet for details to make its response more contemporary and less prone to hallucinations, yet, the data present in the Internet could still be factually incorrect. Is there anyway to prevent / reduce the possibility of this from happening?	Yes, there is. Always ask for sources, and trust only credible sources. Specifically, instruct yourself not to fetch data from any random place, and only trust the biggest, most credible companies that publish articles. Once everything is done, take it through any other AI, play the devil's advocate, and intentionally look for problems or factual inaccuracies.
how to store in file	If you are asking how to save files in Claude Co-Work, simply ask the assistant to write or update a file directly in your connected folder using normal English. The assistant automatically creates or modifies the document on your computer without you having to manually copy and paste anything.
why does the conversation drift? how can we stop it? you mentioned markdown folder? can you elaborate?	Conversations drift because AI has a limited memory window, causing older details to get pushed out as new messages are added. You can prevent drift by occasionally summarizing key instructions, pinning core constraints, or starting a fresh chat when the history grows too long (generally 15-20 messages in each conversation). A markdown folder simply refers to a standard folder on your computer that contains plain text files formatted with basic symbols for headings and lists.
whats the advantage of marked down vs normal	Markdown is better than normal plain text when you want simple structure without needing Word/Google Docs-style formatting. It lets you add headings, lists, links, code blocks, tables, and emphasis using readable characters such as #, -, and bold —while the raw file remains easy to read in any text editor. It is also portable, Git-friendly, and can be rendered into HTML, documentation sites, PDFs, or chat messages.
Will we get the presentation that dileep is presenting as a resource?	You will get a detailed class summary as well as transcript.
Will Markdown file work for Google Gemini too ? Dileep mentioed about MD file supporting chat GPT and Claude	Yes, markdown works for all AI tools.
If I am working in a project and want guidance from mentors, then how could I get the mentorship?	
is cowork free?	It is available only in paid plans
How do you create folders?	When you create a project it automatically makes the folder and any chat sessions in that project show under it
What is markdown?	Markdown is a simple way to format plain text using easy symbols, rather than a visual editor like Word. For example, # Title makes a heading, - Item makes a list, and text makes text bold.
What is markdown?	Markdown is a simple system that uses basic keyboard symbols (like asterisks or hashes) to style plain text—such as making words bold or creating lists—so it remains easy to read and can be quickly converted into formatted pages.
How do you create a folder from the project you made?	When you create a project it automatically makes the folder and any chat sessions in that project show under it
Can you share the prompts he used ?	Everything will be on the LMS including a recording :)
I think it is giving answer on the base of market trend or most possible best option he used. For example if the data vanish he is unable to give a best answer. Then how it is AI.	The data is coming from training the model has, or live data sources.
FUntasitcs	
Do we get the presentation slides to review and revise..?? Thank you..!!	Everything will be on the LMS :)
its alot	
Can we automate these loops?	Yes, absolutely. That is the main reason loops are created in the first place.
Got it	
I struggle with deciding whether to do a Work session in the Cloud or on my computer. If on computer, can I still use online resources, google docs, etc.	Yes sure, cloud is for when you want it to work on a task when your pc is off, when in doubt - just use cloud - unless you are doing work with files that are locally on your pc eg files saved on your desktop
Thanks, that's a great strategy and very thoughtfully answered, reflective of your hands-on experience and knowledge as well !	
Will we have access to this Q7A after the session? IF so, how. I do not remember seeing it in the saved version of our intro session. Or do we need to save it before you close the session?	you will have access to it on lms, will show where once the teaching part is done
Can you clarify if this prompt process can be used across all AIs or specific to Claude, ChatGPT and that is not part of offering in ai accelerator, if i am correct. i need to buy over and above this course. right?	You can use this process across conversational AI tools: give a clear brief, correct assumptions, compare options, and check evidence; the available features and results vary by tool.
I can train my AI to do this always whenever I need it to research something from the web, correct?	You'll learn in coming sessions, that training a model is expensive, so the behaviour of the AI model is tweaked/scoped to specific usecases using techniques like RAG, etc
what is pushback..what to add for it	Pushback means asking AI to challenge weak assumptions instead of simply agreeing; add: 'Point out flaws, explain your reasoning, and suggest a better option when needed.'
Will we be told about the Claude plug-ins that work wonders across all the industry?	In coming sessions, you'll be introduced to the power of plugins
It would be great to see a complete one-pager of instructions for setting up our own	
Will we get the instructions to write in our AI	the operating instructions template will be on the LMS :)
I want to ask if dileep would share his instructions that he is providing chat gpt and claude.	he will
Can we get these custom tag/meaning instructions as an example, so we are mindful and add in our AI tool?	
How can we get details on how to setup custom instructions	Dileep is covering this exactly.
Ok	
How many words do you have for Instruction for Claude? Claude told me to keep it under 500 words to reduce token usage for each query.	There's no hard and fast rule. If you have a specific query that needs to go longer than 500 words, go for it. Do not stick by these limits because they won't really end up getting you any actual benefit.

Rather than reading an existing custom instructions, is there a structure or framework to design this?	This is being shared by Dileep now, and the template will be shared by Outskill.
can we get the custom instruction that you showed	Everything will be on the LMS - There will also be a recording :)
Where is the setting in Claude? I don't see in my version	On Claude's web interface, click your initials at the lower left, choose Settings, and look for 'Instructions for Claude' to add your general preferences.
shubham.dwivedi9756@gmail.com I have been trying to reach out to outskill from past 4 days and sent multiple emails but got no response regarding supergrow ai subscription Can you please see that it is replied to	
How can we get the Claude instruction?	Team will be sharing it shortly
will you show where this setting is located in chatgpt as well?	Settings > Personalisation > Custom instructions
Recording for?	
Sorry, but I will not look up a recording for something that is not covered	
Never mind, Dileep is explaining it already with the template :-)	
ok	
Can you paste the template here?	It will be shared in the lms
I meant Q&A, not q7a...	
Why do we need custom instruction? I missed this point.	To customise claude for you
CAn the custom instructions be done for each project instead of for entire claude?	yes
	Yes, it matters. Three different jobs. Global/personal instructions: always-on, loads into every conversation on every surface. Put durable behavioral rules here. Voice, formatting, how you want Claude to act. Keep it lean. Everything you add taxes every chat. CLAUDE.md: project-scoped. Loads automatically when Claude works in that folder or project. Put project-specific context here. Facts about the codebase, the client, the deliverable. Memory interface: dynamic. Claude writes durable facts and retrieves only what's relevant per task. Not guaranteed to load every time. Good for facts to recall across sessions, bad for hard rules you need enforced every turn. The rule: always-on behavior goes in instructions. Project context goes in CLAUDE.md. Recall-later facts go in memory. Dump everything into global instructions and you bloat every conversation and dilute the signal.
claude pad version with cowork is that is not part of offering in ai accelerator, if i am correct. i need to buy over and above this course. right?	yes, its your personal choice
need break	
I have a question, the answer i am getting in QA is from AI?	No, all questions are being answered by us mentors.
If you don't want an interrogation each time and just want Claude to get to work, how do you have Claude not ask lots of questions each time?	Add this instruction: 'Make reasonable assumptions for routine choices and proceed; ask only when missing information would materially change the result or an action needs my approval, and state important assumptions briefly.'
Will we get a copy of the Q&A for each session?	yes
will we get this template to practice?	yes
Thanks.	
Please share the operating instructions template. it is helpful	Team will share the instructions as Dileep clarified soon
claude paid version with cowork is not part of offering in ai accelerator, if i am correct. i need to buy over and above this course. Am I right?	Yes
so when we make our own custom instructions, do we follow the 3 loop model ??	No, you do not follow a 3-loop model when writing custom instructions for an AI. Instead, custom instructions rely on clear system roles, explicit rules, and defined output constraints. You simply state who the AI is, what it must do, and what formatting rules it must strictly follow.
Where do we access the custom instruction interview template	It will be shared in the lms
Over the weekend I found a major limitation on Custom Instructions for Perplexity Computer they limit the max to 1500 characters. It used to be 8000. I had Perplexity craft a deficiency report that I will submit to the Programming Support Team for Perplexity as this limitation will made me select either Grok or Claude Code. I deleted CHATGPT as I predict that they will be the first casualty of AI as they are taking on water and do not have additional revenue streams such as Meta, Grok, Microsoft, Google or Apple. The massive money that Microsoft has put in is mainly for Azure credits for OpenAI to use their AI Computers. Clauade does not seem to have space limitations for Custom Instructions	David, not using the best tools available today just because some might not be available in a few years is not the right approach according to me. One, we can't always predict how things will go. And two, because the best tools change every few months. For now, concentrate on using what is available.
Why Mr. Dileep is using Opus 5 instead of Fable 5.1 for operating instructions?	Because Fable 5.1 has different kinds of capabilities, and that's not really required here. We use Fable 5.1 when we need to take a lot of decisions on its own, go through multiple steps in parallel, and then come to a conclusion with hours of research. Otherwise, Fable 5.1 is not really needed. Opus 5 is also an extremely powerful tool.
For this particular strategy to get the AI model to work at its best, he used Opus, since I have free plan, Sonnet is the max I can use, what do I do?	Use the model available on your plan for the same briefing and feedback process; clear context and careful review still help, even if the results differ from Opus.
How long is this session? As I thought this was for one hour only.	This will go for roughly 3 more hours.
How is costar prompting and context briefing different? I learnt well utilizing costar prompting through bootcamp program.	CO-STAR helps structure your prompt, while this briefing approach adds feedback loops to correct assumptions, compare evidence, and refine the result; you can use CO-STAR to write the initial brief.

what is socratic thinking	Thinking by questioning instead of asserting. You interrogate an idea until its weak assumptions surface, rather than accepting the first answer. Named after Socrates, who taught by asking, never lecturing. He'd ask a question, take the answer, ask why it held, and keep going until the person saw the gap in their own reasoning themselves.
Should you specify files and file locations here too, for example, if you have a branded powerpoint deck, you want it to always use when creating a powerpoint , should this be specified in custom rules/preferences?	
When using an Incognito chat, is it still available later in Claude, ChatGPT, etc.	No, not at all. That's the entire point of incognito.
If you work at different companies, how do you include that in the operating instructions?	If you are working with multiple companies, go and make projects inside Claude. Give multiple contexts, and all the chats inside a single project will refer to the shared context.
if working for multiple companies, how to deal	If you are working with multiple companies, go and make projects inside Claude. Give multiple contexts, and all the chats inside a single project will refer to the shared context.
what are we exactly doing here ?	We were setting custom instructions in your claude profile so that AI responds in the way you want and is more personalised
what is dileep teaching us at this moment ?	How to build custom instructions to customise your AI for yourself.
will the AI companion include these questions? I am learning more from the questions here	No, it looks only at the mentor's voice and screen instructions
What is socratic mode of AI mean?	Thinking by questioning instead of asserting. You interrogate an idea until its weak assumptions surface, rather than accepting the first answer. Named after Socrates, who taught by asking, never lecturing. He'd ask a question, take the answer, ask why it held, and keep going until the person saw the gap in their own reasoning themselves.
when can we receive this doc?	
when using Claude Pro, will token expire since so many prompt given?	No Claude Pro would allow you to do all of this in one session. However, you can't do this on the free account.
Do I need to get paid version to follow all these instructions taught today?	You can practise the briefing, feedback, and custom-instruction ideas with free chat tools; Claude Cowork and some advanced features require a paid plan.
other than socratic thinking, what are some other ways to answer 'how do you think'	You could describe a preference for evidence and trade-offs, practical examples and action steps, or exploring several options first; give AI an example of the explanation style that helps you most.
Should you do this for both ChatGPT and Claude? Or can you use the same for both?	You can use the same for both
Should the custom instructions be always in Markdown format?	all prompts should be in markdown for best results although the difference is minimal
How about for Copilot custom instruction	Do you mean Microsoft Copilot, Microsoft 365 Copilot, or GitHub Copilot? The custom-instruction setup differs between them.
If you work at multiple companies and make projects inside Claude, what should you have for operating instructions?	Separate companies into individual Claude Projects rather than placing all company rules inside your main global settings. Keep your global custom instructions focused only on your personal writing style, while adding company-specific guidelines and files directly inside each designated Project.
Let me re-word my question. He's going through all of this in Incognito so I assume it's incredibly important to download all chats and results before closing out, correct? May sound like a dumb question but interruptions happen all the time since we can't go back to it if we were to close the browser.	No, no, that's a very fair question. If you are going through all this in an incognito tab, you either need to download all the assets or artifacts made inside the chat. Otherwise, you are definitely going to lose it once your tab or the browser is closed.
would both GPT and Claude give similar output of the instructions?	More or less, they follow the same structure and lead you to the same point, but the output is not necessarily supposed to be the same word by word.
Does it have word count?	
I don't see personalization in Settings (desktop app)	on claude? click on your profile in the bottom left - then "general" then go to the custom instructions box
What if 3 people use One ChatGPT subscription? Can I customize for someone who is doing his phd in cosmology, other digital marketing, other one web design for local clients? (3 people are using my ChatGPT)	You actually have to use projects in that case. Projects help you bifurcate different contexts. Never use account-level settings. Never use personalization. Make multiple projects with multiple context files set up for each one of them, and make sure all the people are using different projects for their own tasks so that the context remains separate.
When will those instructions be available? I want to do it today.	it is already available as part of Day 1 resource
Where is personalization?	In settings
Desktop Verion comes with paid plan or free?	You can use it with the free plan as well, but not all features will be available.
Is customisation in cowork	In claude settings
If i select as Software engineer instead of others	
where is the custom instruction template	
how yo get GPT Astra 6 as shown in dileep screen	Paid plans only get access to higher models
ty	
Pls show where this option is	
how to save file in big bucket or git hub\	what type of file? you can ask claude to save it for you - will just need to sign into github with claude
where can we find this doc? can you share the path?	It will be on the LMS
Got it, thanks !	
Very good	
Will we get the custom prompt he used?	yes

On writing custom instruction to Claude , ChatGpt or others . will it make sense to write instruction by role given that we wear multiple hats like working o multiple industry domain , persoanly outside work like recruiting , job search , travel plan in exploring locations etc	110%. This adds a lot of depth to the character that Claude has to play, and it gives you way better answers.
nothing, without food	
nothing happen.. :)	
The chef will have his recipes , if not given recepes	
would there be any notification or popup that this resource is added?	It is already made available on lms under day 1 resources
Nothing	
outcome will be poor without recepies	
dogs breakfast	
This is valid for a prompt. I was asking interms of custom instructions?	Yes, it becomes the background which is always applied for every prompt/instruction you give
got it. thanks	
When will we get the notes???? the instructions for giving the AI our preferences?	After 3-4 hours of this session, you'll get all the assets right in your LMS.
my chat is disabled	
Thanks!	
wher can we get Dileep's Operating instruction template?	It will be added to the lms later
no food	
NO RESULT	
no consistency	
Today till what time will the session will be there?	Around 2.5 hrs more
How do I make custom instructions in Claude Projects for the different companies I work for?	For setting Custom instructions at global setting that is being taught now, do not use information of different companies. Put only your personal preferences here. To set up custom instructions for a company in Claude Projects, open your specific Project, click Set project instructions (or the Details / Settings tab), and type your rules into the prompt box. These instructions will automatically apply to every conversation you start inside that specific project.
Samruddhi, is this what you mean? Custom instructions ==> use Settings /General / Instructions for Claude	Yes, that is correct
Difference between skills and custom instructions?	Instructions define default behaviour; skills teach the agent how to perform a particular job reliably and efficiently. Skills also avoid filling every prompt with irrelevant detail because they can be loaded on demand.
What is Gemini equivalent for connectors and plugins ?	Gemini's equivalent is Apps / Connected Apps (previously called Extensions) for services like Gmail, Drive, Maps and YouTube.
we cannot use co work in free plan	yes
can we have both Chat GPT and Claude or even multiple AI engines connect with all my apps? will it create any confusion? or issues?	Connecting both ChatGPT and Claude to your apps will not cause system confusion because each AI operates independently within its own isolated account. The only potential issue is user confusion, such as losing track of which AI you asked to edit a specific file or perform an action.
how is it different Skill and Role in context..means Skill we are saying what all skills we need to complete a task is same as when we explain role like developer or BA we are considering skills of role to be considered..	A Role gives the AI a complete professional persona, defining its overall perspective, responsibilities, and decision-making style. A Skill is a specific technique or capability you instruct the AI to use while performing a task within that role.
in class its better to show tools which everyone can access	
Wisperflow is a connector?	Wisprflow is an app/service, and it can be connected via the connector to the AI services. In that context, wisprflow can be called a connector.
Just saw Plug-in also in Claude. Is that having a different purpose	Plugins connect Claude to external software tools to perform real-world actions like fetching live data or editing live documents. Plugins extend what Claude can physically do outside the chat window.
We use the Microsoft ecosystem. I noted that many accounts I was to create are slack, asana, google, etc. Is this interim for learning here? Or is there a benefit to some? In the LMS Welcome somewhere it made it seem as if Google connected better for some features. I don't recall the specifics.	Google is alot easier to integrate with - claude does have microsoft 365 policies but it depends on your IT policies etc
Once you authenticate and connect to AI using connectors, you dont need to authenticate again and again?	that's the precise statement!
in office environment, usually employees are restrited to use connectors so do we have any alternate way to connect tools?	If company restrictions block direct connectors, you can export your data into standard files like Excel, CSV, or PDF and manually upload them into Claude. Alternatively, you can copy and paste text directly into your chat, or ask your IT department to approve official enterprise connections.
Can you connect to two different gmail accounts?	no, one at a time
Explain the difference between using a plugin/connector in Claude to a tool vs. using AI directly in the tool?	i did not really understand your question perfectly. please try to reiterate if i understood it wrong. there are two cases: 1. when you are using mcp connectors (just like he did right now), you are letting claude access your gmail from the backend and work in it. 2. when you have claude inside your browser and you are shopping on amazon, you ask claude to compare two items for you. alternatively you are booking tickets for your flight and you ask claude to proceed to the checkout page. these two are completely different use cases and cannot be clubbed. please clarify and elaborate on what exactly you were trying to ask and what difference you were not clear about.
Is tehre a guideline that needs to be followed while writing skills?	Yes, using anthropics skill creator which is a prompt for making skills and has all the relevant guidelines

[illegible]

one of my newsletter has a Dashboard as link. can it be configured to summarise that also	yes it can
What is a skill in the first place?	a skill is just a file explaining how exactly you want your ai to perform a specific task or function. it includes do's, don'ts, rules, procedures, functions, and everything you want your ai to perform in a certain way
maybe a dumb question: can we use gemini as an alternative to claude / chatgpt and have similar features, skills , connectors, etc	yes gemini is theoretically a good competitor to gpt and claude but practically it's way behind. it's not at all catching up with features like skills and connectors
Is skills available in chatgpt?	on the codex yes. on chatgpt directly no
i am not able to find skills on claude	you'll find that in settings and personalization or customize
What is a difference between Skills and Custom instruction?	Instructions are always-on rules. Skills are on-demand capabilities. Custom instructions load into every conversation and shape how Claude behaves. Voice, formatting, boundaries. They're passive and constant. A skill is a packaged set of instructions plus knowledge for a specific job. It stays dormant and activates only when the task matches it. Your "content-construction" skill fires when you ask for a post, not when you ask a random question. The difference that matters: Instructions = how Claude always acts. Skills = what Claude can do when the moment calls for it.
is the skill creator skill something we need to set up or does Claude(Chat GPT) already know how to do it?	no, no, the skill creator skill is something that claude automatically has because claude needs to support you when you want to create a specific skill
Shouldn't we mention name of the newsletter subscription? Shouldn't we connect to the subscription?	
how do we do this in Chat GPT?	We will cover connectors in the breakout room :)
can a multiple gmail account can be added to the claude at same time from the connector?	No, Claude's standard connector can only link to one Google account at a time, so you cannot add multiple Gmail accounts simultaneously. To switch inboxes, you must disconnect your current Google account and link the other one, or manually paste the information into your chat.
thank you - context is my wife already has claude and chatgpt subscription. is there a 3rd llm I can use instead of buying a new subscription of the 2	Perplexity or gemini
Dileep seems to be leaning more toward Claude. Does that mean Claude is indirectly becoming the preferred tool for this program?	Its personal preference,I also prefer claude - but we will be covering many tools including chatgpt etc
Is skill development in Claude similar to customGPT in chatGPT?	yes
Hello Team, My onboarding session is yet to be completed, so help me with one clarification. There are 17 AI tools listed for us to access, Claude is not listed on it. So do we get any help from Outskill to have access to Claude ,Because to try Claude prompt for today's session,having to select "Co work ", we need a subscription.	Claude is not part of the bonus tools you are getting access to.
How to ask AI to write Context correctly for any specific task? Any particular model to be used?	Structure the context in this order: Role, Goal (the outcome, not the task), Context (audience, constraints, what to avoid), Format, and one Example. Best trick: end your prompt with "Before answering, ask me the 5 questions you need to do this at expert level." It surfaces the gaps instead of guessing. Model: most capable one (Opus, top-tier GPT) for strategy and nuanced writing. Faster mid-tier for volume and simple tasks. But context beats model. A sharp brief on an average model wins.
Where does the output of the daily update go?	
any indian AI's tools are there like Chatgpt claude etc equally??	No, India does not have any good LLMs.
when do we create skills versus creating instructions for a specific project?	You create Project Instructions when guidelines apply only to a specific topic or company, keeping that business context isolated. You create Skills for general execution procedures like formatting reports or applying brand voice that you want to reuse again and again across multiple projects without retyping them.
what is the wording for skills in chatgpt?	skills or agent skills
skills arfe by default or we have to add	Skills are not built-in by default, so you must write and save them yourself in your account preferences. Once saved, you can trigger these reusable skills across any chat or project whenever you need them. Skills once created can also be shared and installed by other who have the skill file.
How do skills function, do they activate if we write the same word in the text?	Yes, there are trigger words or you can ask them to be used explicitly.
how do you verify if the skill wont hallucinate?	You cannot completely guarantee an AI will never hallucinate, but you can dramatically reduce errors by giving clear rules in your Skill instructions. Instruct the AI to rely only on facts provided in your prompts and explicitly tell it to admit when it does not know an answer.
Dillep, can you quickly recap skill builder...mt internet just went off when you started	skill creator is a prompt from anthropic made for building skill files
What is difference between skill and agent. I learnt earlier that skills are steps without using tool. W	A skill is instructions plus knowledge for a task. It shapes how Claude does something when triggered. It's a capability, not an actor. An agent is a system that pursues a goal by taking actions. It plans steps, uses tools, checks its own work, and loops until done. The core difference: Skill = knowledge Claude applies. Agent = work Claude executes autonomously.

How does it know where to put the output?	
What is / (slash) command?	its to use a skill file eg /myskill
How is developing a skill different from starting a project?	A skill is saved forever and can be run in any project or chat - its global
skills are by default or we have to add	Skills are not built-in by default, so you must write and save them yourself in your account preferences. Once saved, you can trigger these reusable skills across any chat or project whenever you need them. Skills once created can also be shared and installed by other who have the skill file.
If I need mentorship from any of the mentors for any projects, how could I take help from them?	All mentors here actually work in the AI space. Over the course, most of use will share our linkedin, and you can connect with us. I have personally helped many learners who have reached out.
If I work at multiple companies and have created Claude Projects for each role, what should my custom instructions be in general?	Just look for the common stuff across all your projects. If you think something applies to all of them, you can use custom instructions for that. If not, just go by projects and don't use custom instructions at all.
could you please share us some news letters and whatsapp groups, slack channels we need to follow to keep us up to date?	this will be shared in coming sessions and on LMS by the team
when do we use "chat" and when do we use "cowork" in claude ?	Chat when you're in the work. Cowork when you want to hand it off. Use Chat for thinking, drafting, analyzing, brainstorming. Anything where you go back and forth and make the judgment calls yourself. It answers, you refine. Use Cowork for multi-step execution across your files and apps. You describe the outcome, it plans, you approve, it runs. Best for repetitive or heavy tasks you'd rather not babysit. The line: Chat produces output you act on. Cowork performs the actions itself. Rule of thumb: if you're doing the same Chat session more than twice a week, that's a Cowork task.
What would be a more practical use case here? I don't see myself making PPT slides from newsletters for my own consumption.	
Do we get the transcripts of all the Q&A as well?	Yes
how can we subscribe to Vaibhav's AI newsletter?	https://stayingahead.ai/
can we get the claude upgradation to use cowork? as its being taught and hands on practice simultaneously helps more. is it possible to replace with any other bonus tool?	Unfortunately no. Claude is not part of the bonus tools
how do you verify if the skill wont hallucinate?	You don't verify a skill won't hallucinate. You constrain it so it can't, then test. A skill hallucinates when it's asked to produce facts it doesn't have. So: Ground it. Give the skill its source material inside the skill. If it needs your pricing, put the pricing in. It should retrieve, not invent. Set a fallback rule. Write into the skill: "If the information isn't in the provided sources, say so. Never fill gaps with assumptions." Separate knowledge from generation. Facts come from documents or tools. The skill only shapes and formats. Don't let it be the source of truth for anything checkable. Test with known inputs. Run cases where you already know the right answer. If it drifts, tighten the instructions. The principle: hallucination is a grounding problem, not a trust problem. You don't hope it behaves. You remove the situations where it has to guess.
skill part didnt understand, why it require	A skill is needed when you repeat the same type of task and want the AI to do it consistently without re-explaining every step. For example, instead of pasting your "create an n8n automation proposal" process each time, make it a skill containing your steps, templates, pricing rules, and output format. The AI loads it when relevant and follows the same proven workflow.
What if you have four different Gmail accounts?	You cannot link four Gmail accounts to Claude at the same time using connectors. You must log out and reconnect the specific Gmail account you need, or create separate Claude accounts for each email.
Does running the skill need internet connection or does it all happen locally on the desktop?	Using most AI tools will need an internet connection, including using Claude and ChatGPT.
Crazy I did the same thing this morning, our staff uses one Chat GPT .	
I setup "Work" in ChatGPT to receive Safari Insights each week, and Marketing Updates - how it will help my work. but it searched for external news / sources and I tried to package it in a presentable way manually in Claude (branded ppt) - wonder if there's a better way to automate it so that my team can receive it in their outlook. But my marketing work won't be relevant for product/ sales but they can help me make decisions..still need to think this one through	Yes, you can create scheduled tasks in Claude Cowork, which can automate the entire process.
here i am seeing Dilp is asking to connect with his other personal details/information..how could you see the security to protect personal data/information. As am working in Data Security industries..just want to understand how AI comply the DPDP or relevant compliances from other countries ..	
how do I manage privacy/security when connecting AI to my apps. for example, my outlook conversations with a client need to remain in confidence.	You can set the permissions of the tool to always ask before doing things - then when it wants to read emails you will get a popup to approve it or not or tell it to filter to fewer emails
this dis not work for me although i connected it successfully i am getting error	
Sir, can we do this current exercise of connector and skill in CO-PILOT in similar way?	Yes, Microsoft Copilot supports both connectors and custom skills in a very similar way. Copilot connectors link external data sources to your chats, while Copilot Studio allows you to build custom skills and instructions to handle specific tasks.

If I am subscribed to Claude from one mail id, can it also fetch information from my another gmail id	Yes, when you pull up the connector, you'd just have to select the correct email Id you want the connector to work with!
can you connect whatsapp/insta?	Through third party tools yes
Understood, thank you.	
Can it be news in different publication/ whatsapp channels or/and Staying Ahead by Vaibhav Sisinty, as I don't use Slack. Also, will it know the current date or there needs to be a separate instruction to be given to Claude?	
can i ask to make the map the process as well by AI?	Yes, you can ask AI to map a process by describing the steps in plain text or uploading a workflow document. The AI will analyze the procedure and outline it into a structured, step-by-step process map.
like which tool for whatsapp?	
why is there a restriction..? any reasons..	You can give it full permissions, or restrict it how you want to. You can completely personalise this.
MS365is not supported under Claude?	Microsoft 365 is fully supported in Claude using official connectors. You can connect your work or school account to link applications like Word, Excel, PowerPoint, and Outlook directly to your chats.
the librarian example - what if i asked Claude to sort out my mailbox and clean it up? then it would have had access to all my emails and info?	
Does the material accessed through the MCPs become part of Chat or Anthropic's LLMs? Or do they learn from it?	
can we connect multiple mails to one AI software ?	Most AI software can only connect to one email account at a time per user login due to account security rules. If you need to manage multiple email accounts, you must either log out and switch connections.
which third party tools can i use	
If Connectors are used on our system, is it safe from Malware/Phishing ?	Official connectors from reputable companies like Claude or Microsoft use secure encryption to safely transfer your data. They do not open your system to malware or phishing because they only read data from accounts you explicitly connect, without executing outside files or links.
If the action for a connector is blocked. Example reply to email is blocked. Does it have a capability to misbehave and reply?	No Roohi. This is restricted by the tool, and not by AI. So Gmail will not let it do this at all.
Are there any alternative tools for Claude Cowork, or a system of AI Models that can complementarily work together? I'm speaking about the Premium Tools offered.	
can my personal AI account be hacked?	Yes, a personal AI account can be hacked if someone steals your login password or gains unauthorized access to your email account. To protect your account, set a strong password, turn on two-factor authentication, and avoid sharing confidential personal information inside your chats.
can we give one mail access to multiple model claude and chat gpt will it affect working	Yes, you can connect the same email account to both Claude and ChatGPT without any operational issues. The two AI systems work independently, so using both will not affect how either platform reads or processes your emails.
Great, Thanks	
My question is more around interaction of tools but let me learn more and I may come back to this question with better clarification.	
we are giving our gmail and other personal tools access to AI. Though it is read access, are we not compromising our privacy as there is always a possibility of leakage and we never know what AI is doing with this info. How to handle this?	Yes, connecting tools adds risk. But it's controllable, not a reason to refuse. Handle it with four moves: Least privilege. Read-only, per-tool, connect only what the task needs. Check the policy. Enterprise-grade AI doesn't train on your data or retain it past the session. Verify this in writing. Scope it. Pick specific folders or labels, not the whole inbox. Revoke after use. No standing access. Never connect banking, health, or legal. The real risk isn't AI reading one email. It's broad, standing, unmonitored access. Control scope and retention and you've handled it.
Also there is paid feature to use WhatsApp. If you want to use for building automation for prototypes then use Telegram, if you are developing a flow to get paid from clients, and if it requires WhatsApp go for paid service https://www.google.com/search?q=What+is+the+licensing+fee+to+use+WhatsApp+as+a+part+of+your+AI+Automation+using+n8n+or+make.com&q=What+is+the+licensing+fee+to+use+WhatsApp+as+a+part+of+your+AI+Automation+using+n8n+or+make.com&gs_lcrp=EgZjaHJvbWUyBggAEUyODIBCjlyNzk0ajBqMTWoAgIwAgHxBcfeVOE19I-n&sourceid=chrome&source=chrome.fb&ie=UTF-8#:~:text=WhatsApp%20Business%20API,%C2%B7/n8n	whatsapp/meta have stricter policies on automation as well
Q1> Are Skills available on "Skills.sh" website safe / recommended to use? Q2> Do you have a library of skiulls that you provide with this training?	

[illegible]

What is a skill?	A skill is a packaged set of instructions plus knowledge for a specific task. Think of it as a trained specialist you can call on. It sits dormant, then activates when the task matches it. Ask for a LinkedIn post and your content skill fires, bringing its rules, voice, and structure with it. What's inside: the steps to follow, the standards to hold, and any reference knowledge the task needs. Sometimes tools too.
what shortcuts keys for Wisper to ON?	
for the skills, i was told that we should always have all of the skills turned off unless using. if not it will automatically run all before responding? is that true	
If I work at multiple companies, but have a primary role at one of them, should I create custom instructions with that primary role and then create projects for those other roles?	Yes, set your global custom instructions around your primary role and general preferences so they apply across all standard chats. For your other companies, create dedicated Projects with specific instructions to keep those workspaces isolated.
where is the skill as you showed in Clude are in Chat Gpt?	
a Skill will not run on its own?	A skill can be triggered manually or AI can trigger it for you based on specific keywords or trigger words you set.
What's the difference between skill and projects?	A project is a workspace. A skill is a capability. A project holds everything for one body of work: its files, chats, context, and instructions, all scoped together. It's the container. Everything inside shares the same knowledge. A skill is a reusable ability that travels across projects. It fires when the task matches, wherever you are. The difference that matters: Project = where the work lives and what context surrounds it. Skill = what Claude can do inside any of that work.
For trying stuff, do we use Claude? Do we have access? Or we need to subscribe on our own?	
SHOULD I REDEEM All ai tools now	
How do u upgrade a skill, could you resummarize	To upgrade a skill, open your saved skill settings, edit the stored text instructions with your new requirements, and save the changes. Alternatively, you can ask the AI in a chat to modify the existing skill with your updated feedback and save the newly generated version.
i have Co-pilot premium at office. but the co-work is not active, what could be reason is it subscription upgrade or any IT access as IT is unable to figure out initially. Please guide what steps to take as i am working on the same.	Most IT do not enable Cowork in Copilot. You would have to reach out to them and get them to enable it for you.
When should chat to be useful for better to save the credits or token, or we have to use all the time cowork. Give us some brief when should be chat useful and for which kind of work, and same for cowork?	
asking again - How to automate draft for a daily basis in claude? does it require any particular skill?	does not require a particular skill. it requires scheduling inside cowork: 1. you go to the desktop app, open cowork, and schedule a specific task: "hey claude will go read your mail daily at a specific time." 2. find the prospective mails to reply to. 3. draft a reply right there in your gmail which you can find.
is english only way of communicating with LLMs.	no you ca go with all the major languages
For concentration purposes; do you advice I check into QA just incase?	
Can skills created in Claude translate to other agents? Ie if we're building our own agents, we can port over skills built by Claude?	
what if I wanted my output to be a graphic based on content? For example, I write a post for LinkedIn and want a graphic. Is there a skill for that?	
For trying stuff, do we use Claude? Do we have access? Or we need to subscribe on our own? Please reply	You would need to subscribe. My recommendation to have a premium account for either ChatGPT or Claude atleast.
do we have chatpt and claude only to perform skill-based tasks?	
should i upgrade claude for co work	
Can i create a skill?	
Can you please share your skill for practice?	
Couldn	
yes i sent a request through the co-work module in presence of IT and they approve at their end. Then message showing getting updated soon but then latter back to same issue showing message request for access. Can figure out i think need to check with the vendor or you have any suggestions please?	There is a chance that Cowork may not be available in India yet. Copilot licensing can be extremely confuding.
How to validate the skill?	
What if it uses a skill you don't know about (someone elses)	it can't do that unless you've added it,& if you've added a skill without proper research that might messup your entire flow
Why is the question not answered?	
Thank you	
On update the skill was asked to run daily automaticlly. Will this updated skill run automatically now ... daily? Or something else needs to be done.	the concept of running automatically at a given interval of time is called scheduling and a skill is the exact capability of that schedule to perform in a certain way. these are two different things that you are confusing
