

AIAP C14 Day 2	
Question	Answer
What all tools would be required today?	completely online resources, details are in the workbook for the exercises
y	
How can i get Day Wise Completion Stamp?	please ask for reflection link on tech support and you will get it instantly
Can we record our own break out room?	Hey Gilbert, we cannot record the breakout rooms as Zoom does not allow us to do that
Where can i get my Day1 completion badge..? Thank you	Hey Zaheer, you can put the query on the tech support channel on LMS and you will get the reflection link there.
It would be better if the breakout room session is a bit slower by the Mentor for non-tech people can follow well	Noted.
where to find yesterdays materials. workbook etc	Should be uploaded on LMS already.
Can I use ChatGPT instead of Claude for prompting?	Definitely
Can you please confirm if we will be learning the LinkedIn workflow? It was on the detailed agenda for yesterday	
tools which we are gonna use today ?	live answered
tools which we are gonna use today ?	He will cover them shortly, but it will be tools like Higgsfield, HeyGen and more.
Hello Team was MCP covered in session yesterday ? Couldnt see that in recording but happy to be guided	Not yet
Where to get the Day 1 Badge? I missed getting it?	ask on tech support channel
Please attach the workbook as a video session- it will be helpful and able to continue the next day session with a confident	will be updated by tomorrow
Step 3: Click Personalisation.	
StFREE versions of Google Flow and 11 Labs were not available. Anyone have issues?ep 6: Open a new chat.	
I suggest that the mentors in the breakout rooms don't get distracted by questions and solve the workbook first and then address questions. Thank you.	
For people from other countries will be too late to attend workbook sessions. I would be appreciated if you can provide the recording sessions.	workbook sessions are not live recorded, so a recording of the steps required is uploaded/linked on the workbook itself generally
What about the tools subscription which you have given?	
Can we make through any of the bonus tools?	
where can i find the workbooks ?	We'll share it at the end of the session once we start working on it in the breakout rooms.
will such AI videos be monetized on YT. if so how. will it be covered?	AI videos can not be monetized on YT at the moment. Unfortunately, last year, YT decided to not allow monetization of AI videos. Hopefully they change this in the future!
Please explain "AI Companion"	its a small icon on your right hand side of the screen
If you do use multiple tools, do not change windows rapidly. This makes it very confusing for the learner who is also making notes and taking screenshots. Don't want to sit through hours of watching replay	Got it. we will try our best to make it look simpler and easier to follow
how they react immediately.	
voice is not audible	
i am not able to audible at all	
What all specific tools needed today?	for today's breakout room, we will be using Google Gemini Flow. Free tier is sufficient.
voice is not coming in my videos ..only video showing	looks like your system issue, please do check once
even if we have the pro version?	
Could you kindly list the tools for today here	He will be introducing the tools shortly in the presentation.
is it Verezana bridge on the picture ?	
For yesterday's session regarding ChatGPT Projects, are we supposed to upload all the resources from yesterday into it as sources?	
enable the camera trainer is asking to switch on camera	
if he could. the main problem that i run into is the longer videos that will be part of the same one. so if content is 90 sec. and most AI is 10 sec, how to do the 90 sec keeping all things the same	Plan the 90 seconds as short shots, reuse the same character references and style instructions, then join the clips in an editor. Where supported, use the previous clip's final frame to guide the next shot; consistency still needs review.
if we decide to do the work book at a later date, and we face a problem. is the email only option to connect with someone to help us?if possible can we book a call for 15-20 mins via Zoom to help us. only for points where we are facing challenges.	No, if you are facing content-related issues, please put on Ask-doubt channel instead of writing to email. There is a dedicated mentor looking into questions on ask-doubt channel

can you share the zoom meeting details to allow me enter through the application same like yesterday please?	we will share it right before we enter breakout rooms
promise	
Where is the option to turn on Video? I do not see that	You can't, it's not enabled. Don't worry, you don't need to turn on your video today.
What about the tools subscription which you have given?	Hi Nagma, we can't see your previous question. They come in one by one, but what are you wondering about the subscriptions?
follow up on the youtube monetization from AI videos ... is this a hard ban on any video touched by AI or only on 100% AI generated videos?	Great question. I'm actually not sure. I think over time they may have to change this decision because of the growth of hybrid production (traditional video with AI).
B is ai

b - ai	
How do I download session recording transcript? I can't find a button for it, other than copy and paste the entire transcript, which is time-consuming. Thanks.	open the document> click on file option and download
me	
M	
I want to know how Uttam went to 95 k followers from 10 k pls share the process and steps	Keep watching!
More than that, the continuity, the discipline	
me	
I can not see chat of anyone, I can just see questions & answers	Yes, chat is not visible because it can be distracting. It's to help students focus on the presenter.
kindly request to read my question and acknowledge this.	I can't see your previous question Madhuresh. We only receive the questions individually 1 by 1. What was your question?
I've noticed that AI-generated images and videos are automatically labelled as 'AI content' when posted. Does this label always appear, or is there a way to remove it?	Which platform are you posting on, and what does the label say exactly? That determines whether it is an editable disclosure or an automatic label you would need to dispute if incorrect.
I have noticed this in insta	
kindly dont waste the time and go direct to the main point	
https://www.instagram.com/p/DcEI4uvEx9z/ here is one example insta marked this image as AI content.	Instagram can add AI info from detected AI signals or a creator's disclosure, so it is not simply a label added to every upload. Tap the label for its stated reason; I can't confirm why that specific post was labelled or promise it can be removed.
were we supposed to submit our work yesterday ?	
33 min now and still no value in the live session	Please be patient. Trust me, you will gain huge value by the end of this one. Uttam teaches some amazing skills and process.
Provide U's contact info please?	https://www.linkedin.com/in/uttammgupta-aisolutionsexpert/ https://www.instagram.com/uttamm_gupta/?hl=en
I can't log in to the resources page , any reason? it show window to book your 1v1 onboarding call,	
Just want to confirm , are the video and audio options available during any session other than the breakout room?	The video and audio are disabled.
How do we rule out getting into copyright issues when we use other videos like CNN etc. in your content ?	Use your own footage or obtain a licence covering your intended use of the clip. Fair use is case-specific, not guaranteed by adding commentary or using a short excerpt, so get legal review if relying on it.
Will you teach us how to pick a niche ,create value for people? How to build a personal brand?	Yes!
what about the copyright, is that something to consider while creating content with AI	Yes; check the AI tool's commercial-use terms and the rights to any images, footage or music you use. Do not assume an AI-generated result is automatically cleared to publish, especially if it closely copies an existing work.
recent example uttam built the system for her does that mean again she paid more money	

when i click on see more it doesn't show the training files as yesterday	what exactly are you referring to?
But Uttam Sir, Please let me know how can I even monetize AI generated videos in Youtube or any other social platform while working in full time? Time is not an issue for me but I need clarity on youtube etc. monetization policy for AI generated content and govt policies for side hustles.	YouTube can monetize original, valuable AI-assisted videos that meet its Partner Program policies; repetitive, mass-produced content can be ineligible. For earning alongside a job, check your employment contract and your country's employment and tax rules, since there is no universal answer.
how to obtain a license	Contact the footage's rights holder or its authorised licensing agency and describe where, how long and whether commercially you will use it. Obtain written permission covering that use and keep the licence and receipt.
Getting file could not open error	
the file cannot be open fix it	
File could not open. Try refreshing the page.	
what is CTA?	Call-to-action. It is typically for the end of a video advertisement, to guide the viewer to the action you would like them to take.
Google docs not working or opening. Please check	
link Not opening	
I already have some ideas, wii this work any niches/ or only certain?	You can adapt an AI-assisted content process to many niches, but the audience, examples and accuracy checks need to fit the topic. Test a few useful posts in one niche first rather than assuming the same format will work everywhere.
ok, can i have the ppt file	
why specifically perplexity ?	Mainly because Perplexity is built around web research. It searches the live web, pulls information from multiple sources, summarizes it, and gives you citations you can immediately check.
For trends, aren't there some tools that track google keywords, twitter/IG trending topics etc?	Yes, Google Trends is great for search keywords, Exploding Topics/Glimpse for spotting emerging trends early, and Brandwatch or Hootsuite/Talkwalker for tracking conversations and trends across platforms like X, Instagram, Reddit and YouTube.
It was only last year the general consensus was that you couldn't get fresh insights such as latest news events as the models were trained on data a couple of years older and were not up to date. Is this now defunct? Or are the models able to stay fresh due to what they see on x, reddit etc? Asking as example speaker just tried was giving him info on what has changed in the last 48 hours	Yes even though their training data ends earlier, they can always research info from online directly.
Do you have tool to help with data scraping for trends?	Yes, platforms like Google Trends automatically track popular search keywords across different regions and timeframes. For platforms like X (Twitter) and Instagram, built-in explore pages show live trending topics and hashtags based on user activity.
Are AI-generated videos more likely to get flagged or receive lower engagement/reach on platforms like LinkedIn, Instagram, or YouTube compared to videos featuring real people and footage?	AI videos can still perform really well. Platforms don't automatically reduce reach just because content is AI generated. What matters more is quality, originality, watch time and engagement. I'd recommend mixing real human footage with AI visuals where possible, as it gives you both authenticity and the creative advantage of AI.
AI : From co-worker to competitor ?	
Are you ever considering the energy usage of this work?	
Can you please create SOP to explain how to activate the AI tools and add the document it into LMS ? Due to office hrs I am unable to join 1:1 session	You can write to support@outskill.com and team will help you
if i HAVE TO pay for a certain video generator using either myself or an avatar, which one would you recommend and why?	it depends on your usecase, best ones are omni flas 1.1, seedance 2.5, kling 3 & heygen
will this work for linkedin equally well ? or a different mindset for LinkedIn ?	Yes, it will work for LinkedIn as well. Planning content for the different platforms is a good practice, but it probably wouldn't be too different between LinkedIn and IG.
CTA FULL FORM?	Call to Action
CTA FULL FORM?	CTA stands for Call to Action. It is a instruction or phrase, such as "Click Here" or "Subscribe Now," that encourages users to take a specific step immediately.
will this presentation from Uttam be shared as well?	
Should you stick to one hook type (persona) or can you switch? i.e. will that change or impact your brand if you switch or is it recommended to switch the archetypes?	You can vary the hook while keeping your topic, voice and promise to the audience consistent. Treat hook types as formats to test, rather than different personalities you need to adopt.
How do i know what hooks will work for food content creation where i share my own recipes?	Test openings that show the finished dish, solve a cooking problem, or promise a specific result, such as 'a 15-minute dinner with five ingredients' if accurate. Compare viewer retention and saves across similar recipes to see what your audience responds to.
Does AI understand the names of these hooks or do we have to describe them to ask AI to generate a hook	It may recognise common hook names, but define the structure and give one example so it uses the meaning you intend. Include your topic, audience and tone, then ask for a few variations.
wouldn't these tricks/hooks get too salesy in a while ?	If they will, there will be something new in the market. content market keeps on evolving, and you need to evolve with it as well.
YOU are sooooooood at this. The JOY shows!	
Got it. So would you recommend a mix of real human footage + AI visuals? Is there a particular format or style that tends to perform better?	Try your own voice or footage for the main explanation, with AI visuals where they help illustrate it. Compare that with a simpler version using retention and audience feedback; there is no single format guaranteed to perform best.

does one have to choose one archetype and stick to that or can we change them?	live answered
does one have to choose one archetype and stick to that or can we change them?	In one video, it's best to stick to one, but if you want to change for another video you absolutely can.
will these Kind of hooks create a sense of tiredness as most of the people are doing it	Yes, repeated wording and exaggerated promises can become tiring. Use the structure as a starting point, then add a specific observation or example and deliver what the opening promises.
Regarding Shristi's mention of using paid AI tools for today's session — I wanted to check whether we'll be using the tools Vaibhav already has subscriptions for, or if we need to purchase new subscriptions altogether.	For the workbook, we will be using free tools that are available out there, so no paid subscriptions are required. Also its Shasti:)
How do i know what hooks will work for Physiotherapy exercise content creation ?	Test openings based on a common viewer question, a technique demonstration, or a myth you can accurately explain, then compare retention and saves. Keep health claims evidence-based and avoid promises such as "this exercise cures everyone's pain".
slow	
GOOD!	
slow a little	
Can we get the pdf of this deck?	
MY chat not working	The chat visibility is disabled, but if you type in the chat and submit it, Uttam and the team will see it. We also see the questions here.
If you have written material before Like Comedy/Poetry/thriller stories, can that be used as your own Voice?	Yes, give AI a few examples of your own writing and identify the qualities to retain, such as humour, rhythm or vocabulary. Choose samples that fit the new content, since a thriller's voice may not suit an explanatory post.
Narendra modiji	
Could you summarise the names of great speakers Uttam talked about? Could not note all	Ask the AI Companion
if i create a video for a well known doctor, and he already has a voice, but dont work well on social as he get to technical, how do change that	Keep his personality, but explain one patient question at a time using plain language and an everyday example. Have AI simplify a draft without changing its medical meaning, then ask the doctor to review the final script.
will it not create copyright issue if use anyone elses voice?	If you mean writing style, use broad traits such as clarity or humour while creating your own wording and examples. If you mean cloning someone's actual speaking voice, get explicit permission and check the applicable rights; copyright is not the only consideration.
can i build the DNA according to vedios not its transcript	Yes, if your chosen AI tool supports analysing video, ask it to describe pacing, gestures, visuals and delivery as well as the words. A transcript is still useful for studying sentence structure and vocabulary, so combining both gives a fuller style guide.
Must I also sign up for viewrank as well in addition to adding the exention?	Installing an extension and creating an account are separate steps; if it prompts you to sign in, use an existing account or register. I haven't verified ViewRank's exact requirements, so check the prompt before assuming you need a paid subscription.
Does viewrank ai work for linkedin as well?	no
Can we use ViewRank on other social media sites? If so, which ones?	Insta and tik tok
pls slow down	
Can you share the link of all ai and extension used just now	
suggest a tool that can do that	He is using ViewRank
pls slow down	Uttam can't see the Q and A, but don't worry if you miss something because the replay recording will be available to you afterwards to watch at your own pace.
what is the tool name	ViewRank
pls slow down	
pls slow down	
for me it shows only 7 days free option and asking me to provide my payment details	ViewRank's Chrome extension is free, while the AI workspace has a seven-day trial followed by a paid plan. For free profile sorting, choose 'Download free extension' on viewrankai.com rather than starting the AI workspace trial.
does it work on YouTube as wwell	youtube natively gives you the option to sort by views
Does this work for the youtube and shorts as well apart from the instagram and tiktok?	no
There is no free possibility	
Can we the presentation ?	You'll receive the video recording replay afterwards, but not the presentation deck file.
Was it viewrankai.com?	yes
For non-techies, the button being clicked so fast, it gets difficult to register. So, do we get the process/workflows for completing any task?	You'll have the video recording afterwards to watch at your own pace.
i have mp4 vedios not online	Upload the MP4 directly to Gemini using Add files, then ask it to analyse the speaker's tone, pacing, vocabulary and gestures into a style guide. Start with a short clip that fits your account's upload limits.
yes	
yes	

chat is off	
there is no free option	
How does the mentor identify tools like Happy Scribe? Is there a registry of AI tools?	Yes, directories such as Futurepedia.io list AI tools by task and category. Search for your use case, then test a shortlist on the same sample and compare accuracy, price and export options.
does it transcribe Hinglish?	You can try it but I don't think so. It will likely work best with Hindi or English seperately.
Thank you Harshith	
What about notebooklm?	
can we use linkedin content ?	Yes, paste a few of your LinkedIn posts and ask AI to identify your tone, sentence structure, hooks and recurring themes. Use that style guide to create fresh posts with your own ideas and examples.
can we use LinkedIn context too ?	Yes, LinkedIn post text can be used as examples for a writing-style guide; choose posts that represent the voice you want to maintain.
Is it possible for me to build a transcribe tool with what i learn or with Emergent which I also have	Yes; build a file-upload page, send the audio to a speech-to-text API, and display the transcript with an edit and download option. Start with short files, keep the API key on the server, and account for transcription usage costs.
wayin is limit is daily or lifetime on account	Wayin advertises free daily credits for video transcription, so that allowance is daily rather than a one-time lifetime quota; check your account's counter for the amount available.
can you pls answer my question - where do you find the free version of viewrankai.com. ???????	On viewrankai.com, click 'Download free extension' near the top of the page. The Chrome extension is free; the separate AI workspace is the product offering a seven-day trial.
what about LinkedIn content ?	
In wayin, can you add multiple URLs?	
Thank you Shasti :)	
can we not take the transcript available on youtube?	Yes, if the YouTube video already has a transcript, you can use that for the analysis without a separate transcription tool. Check names, punctuation and misheard words before using it as a writing-style reference.
does ranker work with youtube	ViewRank's ranking extension supports Instagram and TikTok; its AI workspace also accepts YouTube Shorts through a URL or file upload.
Is it okay to get scripts from a few different creators in the same doc and have it analysed or do it seperately per creator's channel?	Same doc is fine, but tag each script by creator first. Mixed without labels and the AI blends voices into mush. Better: batch them, label each, and ask it to find the pattern ACROSS creators (hook structure, pacing, retention beats). That's where the gold is. Per-creator only when you want to clone one specific voice. One doc, labeled, pattern-first. That's the move.
@harshith - do you mean the first 7 free plan?	No, I mean the free Chrome extension, not the seven-day AI workspace trial: https://chromewebstore.google.com/detail/viewrank-find-best-instagram/implakdhcomaeakpkhgcnaihlbfhjlin
is this paid version of Claude ?	Not sure if he is using paid or free, but he is doing now you should be able to do on the free version.
is this paid version of Claude ?	
Can Claude not create this video without creating a prompt	no
What is the Costar framework?	CO-STAR is a prompt structure that forces you to give the AI everything it needs in one shot: C · Context (the background) O · Objective (what you want done) S · Style (writing style, e.g. journalistic) T · Tone (formal, witty, bold) A · Audience (who it's for) R · Response (format: list, JSON, email)
what is the VidIQ thing on your claude?	vidIQ is a separate third-party YouTube tool (keyword research, tag suggestions, competitor tracking, thumbnail scoring).
He is converting into a skill, why not into a project master prompt?	A skill packages a repeatable workflow and supporting examples so Claude can load it when relevant across tasks. A project's instructions can work too when you want the guidance to apply within that one project.
Will these Q and A's be available in the recordings?	yes
is this paid version of Claude ?	
ok	
presenter has an interesting plugin or something showing him what his token cost is per message? If so, what is it and where can I get/enable?	It's a Chrome extension, not native. Look up 'AI Token Tracker' in the Chrome Web Store. It overlays token count and cost per message right in the chat
Are these tools already in tools provided as part of the learning	
is this claude free version ?	
Two Questions:	

[illegible]

What is the difference between HeyGen and elevenlab? is it doing similar thing for voice?	HeyGen · video-first. Avatars, video clones, talking-head generation, lip-sync, video translation. It does voice, but voice is a feature inside the video. ElevenLabs · audio-only, and the best at it. Voice cloning, text-to-speech, dubbing, audio narration. Pure voice engine. Overlap: both can clone your voice. But ElevenLabs voice quality is deeper (more emotion, control, languages).
this type of important session should be shown little bit slow end of day the learner should understand if everything we need to watch recording this does not make sense. if i dont understand the steps how will i make my clone. this is very disappointing	Hey Subhankar, we're really sorry that you are not able to catch up to the mark, but trust me, after this session is over, you'll get the recorded class in your LMS, and you can watch it at your own pace. Once you are watching at a comfortable pace, pausing and playing as per your requirement, you will definitely go through each and every step since that is mentioned here.
How would we integrate the audio and video in one single output?	He's going to show this shortly.
Are we going to the names of all of these Ai apps?	
Any alternate for Heygen, please?	Synthesia is an alternative for script-to-avatar videos and has a free plan to try stock avatars; compare a short sample before choosing a paid plan.
I agree with you @Subhankar Dey. Many of the tools were not covered in the pre-read.	
what is the alternate to elevenlabs that was mentioned ?	The alternative I mentioned was Smallest AI (smallest.ai), which offers text-to-speech for voiceovers.
how do we do a faceless videos?	Yes For faceless videos, you don't need an avatar at all. Start with a script + AI voiceover, then build the visuals using AI generated video/images, stock footage, screen recordings, B-roll and text animations. Tools like Higgsfield or Veo can create the visuals, ElevenLabs for voice, then CapCut/VEED for the final edit.
how much credits is utilized for premium avatar 5 model video generation? like how much for a 1 minute or 5 minutes video	For HeyGen Avatar V, it's around 48 credits per minute. So roughly 1 min = 48 credits and 5 mins = 240 credits. Best tip is to finalise your script and scenes first, then generate, so you don't waste credits on too many retries
Hey, can you repeat why you choose Avatar 3 on some occasions and why you choose Avatar 5? What are the reasons you are giving? Why do they cost differently?	Avatar 3 is great when you need a simple talking head video quickly and want to save credits. Avatar 5 is the premium option when you want more realism, natural expressions, gestures and body movement, so I'd use it for important client facing or high quality content. It costs more because it uses a more advanced generation model and more compute.
which is the tool we can use to integrate our own pics / small videos into the eye catching video by changing backgrounds, music etc.,	Adobe Express lets you combine your photos and clips, add music, text and transitions, and export one video. Replacing a video's background is available through its Premium video background remover.
this is very disappointing training.	
Will you be teaching us how to automate this. This whole process looks very time consuming and tedious just for one video...	you'll have to spend time at the beginning to learn the craft of what it needs to be and how it needs to be done. In the coming days, we'll be learning about AI automations. You can then compile the information you have learned today, practice it on your own, and use the capability of creating automations to use it further.
I am from andhra pradesh..and we speak telugu here and in my niche (i need to address people in telugu and content creation is also in telugu)..I find difficulty in creating content which is natural in telugu..is there any solution...	Give AI a few examples of your own spoken Telugu and specify your audience's regional dialect, everyday vocabulary and preferred English mixing. Ask it to write directly in conversational Telugu rather than translate an English script, then read it aloud and revise phrases you would not naturally say.
Could you show, how you could edit it - background and also, some of the hand gestures aren't aligned with your script. Is there a way to edit those? yOu don't have to show but is verbal explanation possible?	Yes, verbally The background is easy to change in HeyGen by selecting the scene and replacing it with a colour, image, video or uploaded background. For gestures, you can guide them through the script and motion controls, but you can't precisely edit every individual hand movement after generation. If a gesture doesn't match, usually adjust the script/motion prompt or regenerate that specific scene rather than the whole video.
can you use elon's pic on our video without any privacy issues	You need to be careful. Using Elon Musk's photo for commentary, news, parody or educational content can be different from using his likeness in an advertisement or making it look like he endorses something. For commercial/promotional content, I would avoid using his image or an AI clone without permission because it can create likeness, false endorsement and platform policy issues.
where are the coupon codes for the tools.. ambye im asking again....please someone point out the answer	
when i want to show a skill of myself but i want it to do more interesting just the skill and a voiceover can i also go this way just without an avatar ? what would be the best way?	Yes, film yourself demonstrating the skill and add a voiceover; an avatar is optional. Open with the finished result, then use close-ups, short steps and captions to make the process easy to follow.
any free alternate to higgsfield ai?	Yes For free or low cost alternatives, try Kling AI, Pika, Hailuo AI, Vidu or Seedance via Dreamina. Most give you some free credits/daily generations, but there isn't really a completely free replacement with everything Higgsfield offers.
hey are we going to get any badge at the end of each session? yesterday I dint get it	
Higgsfield.ai is a tool that can be replaced for tools like heygen (for video) or eleven labs / fish (audio), right?	Yes Higgsfield can replace some functions of HeyGen and ElevenLabs because it handles video, avatars/lip-sync, voice and audio in one place. But for professional digital clones, HeyGen is more specialised, and for high quality voice cloning, ElevenLabs is more specialised. Higgsfield is great when you want an all in one creative workflow.

how to create training video of any IT product fo 15-20 mins ?	Break the product workflow into short chapters, record the real screen steps, and add a script-led voiceover with captions. Assemble the chapters into a 15-20 minute video, then test that a new user can follow the steps successfully.
google veo is good videos? and i can use nano banana pro for photos. be honest about google veo 3.	Yes, Google Veo is very good, but there is a newer video model now called Google Gemini Omni. I recommend looking this one up as well.
what tools to use if you have longer footage and want to create short clips for your socials?	WayinVideo offers AI clipping to turn long videos into short vertical clips with captions and reframing. Review the suggested cuts so each clip has a clear opening, enough context and a complete ending.
summarise the section since the break up to now	
(whenever you get a moment here) When using AI, I felt editing existing image is tricky bcos it would change more than just the intended object (say necklace). Any tips to help there?	Nano banana pro is really good for only editing specific elements of the image. Just be very specific with your prompt!
Can we use Canva AI instead of Higgsfield.AI.	No, Canva's AI is completely different from what Higgsfield offers.
are remaining credits available on chatgpt and claude too	No. It is just on higgsfield
A faceless video workflow / framework / demo will be covered in the course ?	yes, we'll be making that in the breakout rooms
The indian women face.. is it legal? as she must be some ones face..?	It's legal. It is not someone else's face. However, if you are using someone else's face, you always need their permission.
Can you upload an image that gives the vibe you want?	Yes, use it as a reference image and specify the parts you want to borrow, such as lighting, colours, composition or mood. Also state what should be different in the new image.
when generating our content	
@Jordan Outskill. Can you elaborate. I have experienced, Canva AI generating equally elaborate images/ video clips	My apologies, I am looking now and seems they added image and video models to their platform. You can also use Canva for AI image and video, but sometimes Uttam and Vaibhav use some templates that are exclusively in Higgsfield.
hows invideo.ai for video gen?	InVideo is useful if you want scripting, generated clips, stock footage and timeline editing in one workspace. Test it on your own brief and check the model and credits included in your plan, since those affect the result and cost.
what if someone challenges and says like you used him/her photo for commercial purpose or personal use without consent and permission.	that'll be the case when you do so for unethical purposes & not when you play safe in legal zones
Earlier I asked how to download transcript, you said to open the document and click on file option and download , but there's no dropdown or any options there once I click on the transcript button under the session video.	
Can you use the formula in chatgpt too?	Yes, you can (for the text and images, not video)
how much are 20 credits worth in USD ?	For which platform? Generally speaking for the tools/platforms you have to do the math to see how much the credits cost in dollars and how many credits are used for each models.
for saas product review or training video etc can these AI be used? i see a lot of spelling mistakes when i tried to create	Yes, use AI for the script, narration and editing, but use real screenshots or screen recordings for the product interface. Add exact labels and captions in the editor and proofread them, rather than asking video generation to reproduce UI text.
any AI tool for product management team to crate faster video rather real base since it wil take lot of time	Synthia can turn product documents into narrated presenter videos, which is useful for feature overviews and training introductions. For step-by-step software instructions, add real screenshots or a short screen recording so the interface stays accurate.
I understand about making a clone and setting up voice and giving the script to it. How do we add cool ai generated clips in between the reels like Vaibhav does in his reels. its not only him talking he makes them interesting using mini clips	Those cutaway clips are B-roll: generate short visuals for key moments in your script, then place them over the presenter footage in a video editor. Keep the narration running underneath and cut back to the presenter when it helps the explanation.
What he did in Higgsfield can we do in Haygen?	It looks like HeyGen recently added third party video models like Google Veo, ByteDance Seedance, and more, so yes, you can generate AI b-roll on HeyGen as well using third party models.
Ive found that seedance adds audio when you dont want it or, as is the case in the example just given, the voice is wrong. Can you generate the same video without the audio and if so, how do you merge the 11 labs audio with the seedance video? Is that manual editing?	You can mute the generated video's audio in an editor and place the ElevenLabs voiceover on a separate audio track, then align the cuts to it. If a face is visibly speaking, replacing the audio alone will not fix its lip sync; that needs a separate lip-sync pass.
cAN WE bENEFIT FROM q & a AFTER CLASS?	Yes! There will be Q and A in the breakout rooms.
So you can create with known personalities for content? Where is the borderline not to get into legal issues	It's simply inspiration from their work, not plagiarism, which is very different.
How did yu go about writing scenes for the video along with footages?	Break the script into short beats and create a shot list pairing each narration line with a visual, action, camera angle and duration. Then generate or select footage for each shot and assemble it against the voiceover.
ok got it thanks	
Can I use my own music to do this last option to make me dancing on my music?	You'll need an actual video of you dancing on that song because a different dance on a different song would not match the beats of your own music.
What tool(s) can we use for free music? I don't remember that in the list of tools provided	YouTube Studio's Audio Library offers free background music and sound effects. Check each track's licence and attribution requirement, especially if you plan to publish outside YouTube.

[illegible]

If I need to pay for a licence should should I use Heygen or Higgsfield							
playbook is as good as it gets with Accelerator #15 - keep it up, keep iterating, keep improving!							
Break							
Can we get the vaibhav skill.md that Uttam promised :)
